Good morning,

It appears the PNAP will now be issued on Friday, 8/8/2025.

Also, attached is a slightly revised version of the draft permit from the version that you approved. This attached version will be the version used in conjunction with Notice and the Comment period.

Please note the revision involves the removal of the following three citations from the "Monitoring and Testing Requirements" column for unit BOILER2 and Chapter 117 and the Pollutant CO (page 30):

§ 117.8120
§ 117.8120(1)
§ 117.8120(1)(A)

This revision is due to a recent update to Logic/DSS for the rule. These requirements are covered in § 117.8100(a), which is included as a requirement in the permit.

Thank you.

Subject: RE: WDP Review - Sasol Chemicals/Greens Bayou Plant Renewal (Project 37617, Permit O1254)

Good afternoon,

After several discussion with our Logic/RRT Team and a Technical Specialist, apparently, the removal of Reporting Requirement § 60.48c(j) was intentional.

Since the unit is burning natural gas, only records of fuel usage and the design heat input capacity are required, making the only required report the initial notification per [G]60.48c(a). Since there are no other required reports necessary under Subpart Dc based on the submitted attributes, it does not make sense to include the 60.48c(j) required reports be submitted for each six-month period.

Accordingly, I have “reversed” my previous action I mentioned below and have again removed the Reporting Requirement citation § 60.48c(j) from each of the three pollutants. Please acknowledge.

Related to the requested change in the indicated deviation limit in the Periodic Monitoring associated with Chapter 117, Subchapter B, and Pollutant CO, the requested change for unit HEOXRU13 from 0.0582 to 0.062, is approved.

For unit GRPHEATER1 and the change in deviation limit from 0.0153 to 0.017, please keep in mind that the existing Periodic Monitoring is for GRPHEATER1, which means that instance of Periodic Monitoring, including the specific deviation limit, applies to ALL five units comprising GRPHEATER1 (HE1DU02, HEC21DU02, HEC27DU02, HEC33DU02, and HECRU02), and not just an individual unit. Please confirm your understanding the requested “new” deviation limit is applicable to each of the five units. Upon this confirmation, the request can be approved.

Thank you.

Good morning,

I have reviewed your comments provided below and have the following responses:

1. For the two requests to change the deviation limits, please provide an explanation as to the reason for the request. What is the basis for the request/change?
2. I have added the Reporting Requirement § 60.48c(j) back into the permit for Unit BOILER2 and NSPS 60Dc, pollutants PM, PM (Opacity), and SO2, and Index No. 60Dc-00008. It was apparently removed as part of a recent update to the NSPS Dc Logic/RRT. I am working with the Logic/RRT Team to get the citation added back to the Reporting Requirements in the database. Thank you for your inquiry on this. [Note: Your comment below references 60.48(c)(j), please note it is actually 60.48c(j)]

Good afternoon Mark,

Thanks for your patience. We have reviewed the document and have three minor comments:

1) Page 116: Periodic Monitoring Summary. GRPHEATER1: "Any monitoring data above the hourly fuel gas usage of 0.0153 MMscf/hr. shall be considered and reported as a deviation."

This should be 0.0170 MMscf/hr.

2) Page 119: Periodic Monitoring Summary. HEOXRU13: "Any monitoring data above the hourly fuel gas usage of 0.0582 MMscf/hr. shall be considered and reported as a deviation."

This should be 0.0620 MMscf/hr.

3) Page 31: Applicable Requirements Summary

Good morning,

I have completed the technical review of the submitted renewal application for Sasol Chemicals (USA) LLC and the Greens Bayou Plant (Project 37617, Permit O1254). Attached, please find the Working Draft Permit (WDP) for your review and approval, and/or comments.

In addition to the requested changes/updates, please note the following revisions have also been made to existing permit shields as follows:

- Corrected existing typos in the "Basis of Determination" for units TANK 201 (NSPS Ka) and TANK 281 (NSPS K);
- The "Basis of Determination" text was revised to correctly reference the rule with "construction, modification, and reconstruction" for TANK 10012 and NSPS Ka (instead of just construction); and
- The related citation was corrected from 101.1(115) to 101.1(116) for units TANK 175, TANK 211027, TANK 211028, TANK 211029, TANK 54, TANK 602, and TANK 604, for Chapter 115, Storage of VOCs.

Please review and provide your approval and/or comments at your earliest opportunity, but please no later than COB on Wednesday, 5/7/2025.

- A. Visible emissions from stationary vents with a flow rate of less than 100,000 actual cubic feet per minute that are not listed in the Applicable Requirements Summary attachment for 30 TAC Chapter 111, Subchapter A, Division 1, shall not exceed 20% opacity

averaged over a six minute period. The permit holder shall comply with the following requirements for stationary vents at the site subject to this standard:

- (i) Title 30 TAC § 111.111(a)(1)(B) (relating to Requirements for Specified Sources)
- (ii) Title 30 TAC § 111.111(a)(1)(E)
- (iii) Title 30 TAC § 111.111(a)(1)(F)(i), (ii), (iii), or (iv)
- (iv) For emission units with vent emissions subject to 30 TAC § 111.111(a)(1)(B), complying with 30 TAC § 111.111(a)(1)(F)(ii), (iii), or (iv), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146. These periodic monitoring requirements do not apply to vents that are not capable of producing visible emissions such as vents that emit only colorless VOCs; vents from non-fuming liquids; vents that provide passive ventilation, such as plumbing vents; or vent emissions from any other source that does not obstruct the transmission of light. Vents, as specified in the "Applicable Requirements Summary" attachment, that are subject to the emission limitation of 30 TAC § 111.111(a)(1)(B) are not subject to the following periodic monitoring requirements:
 - (1) An observation of stationary vents from emission units in operation shall be conducted at least once during each calendar quarter unless the emission unit is not operating for the entire quarter.
 - (2) For stationary vents from a combustion source, if an alternative to the normally fired fuel is fired for a period greater than or equal to 24 consecutive hours, the permit holder shall conduct an observation of the stationary vent for each such period to determine if visible emissions are present. If such period is greater than 3 months, observations shall be conducted once during each quarter. Supplementing the normally fired fuel with natural gas or fuel gas to increase the net heating value to the minimum required value does not constitute creation of an alternative fuel.
 - (3) Records of all observations shall be maintained.
 - (4) Visible emissions observations of emission units operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of emission units operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions observations shall be made during times when the activities described in 30 TAC § 111.111(a)(1)(E) are not taking place. Visible emissions shall be determined with each stationary vent in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each stationary vent during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet

prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

(5) Compliance Certification:

- (a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(1) and (a)(1)(B).
- (b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(1)(F) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.
- (c) Some vents may be subject to multiple visible emission or monitoring requirements. All credible data must be considered when certifying compliance with this requirement even if the observation or monitoring was performed to demonstrate compliance with a different requirement.

B. For visible emissions from a building, enclosed facility, or other structure; the permit holder shall comply with the following requirements:

- (i) Title 30 TAC § 111.111(a)(7)(A) (relating to Requirements for Specified Sources)
- (ii) Title 30 TAC § 111.111(a)(7)(B)(i) or (ii)
- (iii) For a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source subject to 30 TAC § 111.111(a)(7)(A), complying with 30 TAC § 111.111(a)(7)(B)(i) or (ii), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146:
 - (1) An observation of visible emissions from a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source which is required to comply with 30 TAC § 111.111(a)(7)(A) shall be conducted at least once during each calendar quarter unless the air emission source or enclosed facility is not operating for the entire quarter.
 - (2) Records of all observations shall be maintained.

(3) Visible emissions observations of air emission sources or enclosed facilities operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of air emission sources or enclosed facilities operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions shall be determined with each emissions outlet in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each emissions outlet during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

(4) Compliance Certification:

- (a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(7) and (a)(7)(A).
- (b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(7)(B) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

C. For visible emissions from all other sources not specified in 30 TAC § 111.111(a)(1), (4), or (7); the permit holder shall comply with the following requirements:

- (i) Title 30 TAC § 111.111(a)(8)(A) (relating to Requirements for Specified Sources)
- (ii) Title 30 TAC § 111.111(a)(8)(B)(i) or (ii)
- (iii) For a source subject to 30 TAC § 111.111(a)(8)(A), complying with 30 TAC § 111.111(a)(8)(B)(i) or (ii), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146:

- (1) An observation of visible emissions from a source which is required to comply with 30 TAC § 111.111(a)(8)(A) shall be conducted at least once during each calendar quarter unless the source is not operating for the entire quarter.
 - (2) Records of all observations shall be maintained.
 - (3) Visible emissions observations of sources operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of sources operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions shall be determined with each source in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each source during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.
 - (4) Compliance Certification:
 - (a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(8) and (a)(8)(A)
 - (b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(8)(B) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.
- D. Certification of opacity readers determining opacities under Method 9 (as outlined in 40 CFR Part 60, Appendix A) to comply with opacity monitoring requirements shall be accomplished by completing the Visible Emissions Evaluators Course, or approved agency equivalent, no more than 180 days before the opacity reading.
- E. For emission units with contributions from uncombined water, the permit holder shall comply with the requirements of 30 TAC § 111.111(b).

- F. Permit holders for sites that have materials handling, construction, roads, streets, alleys, and parking lots shall comply with the following requirements:

Good afternoon,

Please see the updated documents. You are correct, there was a typo in the PBR-SUP and the OP-2 regarding the tanks.

Form UA12 was filled out with just Table 2A and the index. R5352-ALL to show that all the requirements are applicable for GRPFUG1, GRPFUG2, and GRPFUG4, and updated the code options for the question/attribute "Title 30 TAC § 115.352 Applicable" to PETCHEM.

Let me know if there is anything else additional that is needed for the UA12.

Subject: Request for an Updated UA12 and Chapter 115, Petroleum Refining, Natural Gas Processing, and Petrochemical Processes

Good evening,

The final piece of the puzzle in order to provide the WDP is the submittal of an updated UA12, Tables 2a – 2K (as appropriate) for units GRPFUG1, GRPFUG2, and GRPFUG4.

The UA12 was updated 02/2025 which included changes to the questions/attributes and response options for “Title 30 Texas Administrative Code Chapter 115 (30 TAC Chapter 115), Subchapter D, Division 3: Fugitive Emission Control in Petroleum Refining, Natural Gas/Gasoline Processing, and Petrochemical Processes in Ozone Nonattainment Areas.”

For the three units (Groups) identified, please provide an updated UA12 using the 02/25 form version.

The main change/update is the code options for the question/attribute “Title 30 TAC § 115.352 Applicable”. The current response in the database is “Yes”, which is no longer an option. The current options are:

Please submit at minimum and updated Table 2a for each of these three units/Groups with appropriate responses for each question/attribute based on the updated form and then for each additional question/Table/page as appropriate based on responses. I have attached the current form version for convenience.

Please provide the updated form at your earliest opportunity, but please no later than COB on Tuesday, 4/15/2025.

Thank you.

Subject: RE: SOP Renewal - Sasol Chemicals (USA) LLC/Greens Bayou Site (Project 37617, Permit O1254)

Good evening,

As I began processing the updates and comments provided 4/4/2025, the following situation immediately surfaced:

Currently the following Unit IDs exist in the effective permit:

TANK 600
TANK 601
TANK 605
TANK 1000

The updated OP-2 and OP-PBRSUP, submitted on 4/4/2025, both indicate the following Unit IDs:

T-600
T-601
T-605
T-1000

Accordingly, please advise and/or provide as appropriate each of the following:

1. Are these units one in the same?
2. If so, do the Unit IDs need to be updated as part of this project?
 - a. If yes, the Unit IDs do need to be updated, do the Unit IDs for the other 149 or so existing "Tanks" with Unit IDs beginning "TANK" that are currently in the permit, need to be updated as well?
 - i. If any Unit ID is being updated, please submit an updated OP-2, OP-SUMR, related UA Form/s, etc., to request and identify the changes.
 - ii. If the reference to T-600, T-601, T-605, and T-1000 was simply an error, please submit a revised OP-2 and OP-PBRSUP to correctly identify the Unit IDS as TANKL 600, TANK 601, TANK 605, and TANK 1000, on both forms.

As a reminder, should an updated OP-PBRSUP be necessary, the entire form (all four Tables) must be submitted in full, with all Tables indicating the new submittal date.

If the referenced Unit IDs in the 4/4/2025 submittal was indeed just an error and only an update OP-2 and OP-PBRSUP are needed, please provide at your earliest opportunity, but please no later than COB on Tuesday, 4/15/2025.

If all 153 units with Unit IDs beginning "TANK" are indeed being updated to Unit IDs beginning "T-", please advise at your earliest opportunity, but please no later than COB on Friday, 4/11/2025.

Then, please provide all updated forms and related documentation at your earliest opportunity, but please no later than COB on Thursday, 4/24/2025.

Thank you.

Mr. Meyer,

Sasol would like to request an extension to provide the information requested for the following reasons:

1. Sasol is currently working on submittals of several air compliance reports due by 3/31.
2. Sasol is in the review process for the draft NSR permit, which comments are due 3/28.
3. The SHES Manager will be out of the office until 3/24, who will need to review the response.

Sasol would like to request a due date of April 4th based on this. Thank you for your consideration.

Good afternoon,

I have been assigned the Site Operating Permit (SOP) renewal application submitted January 31, 2025 for Sasol Chemicals (USA) LLC and the Greens Bayou Site. The application has been assigned as Project No. 37167 and is associated with SOP O1254.

After being assigned to me yesterday, a quick overview of the submittal identified the following items which require clarification/explanation and/or additional information:

1. The cover letter states: "Please note that we are currently awaiting the approval of the NSR Permit No. 20686 renewal from the agency." Please advise whether there will be additional changes required for this renewal application as a result of the issuance of the pending amendment/renewal of NSR No. 20686. If so, please submit all appropriate and related documentation.
2. The "Version No./Date" indicated on the submitted OP-REQ1, question XII.I. (page 89) for each of the PBRs, are actually issuance dates of the related PBR registration. Please submit a revised OP-REQ1 page 89 which identifies PBR version date, instead of the issuance date of the PBR registration.
3. The submitted OP-PBRSUP contains only Tables A and D. Please confirm that both Tables B and C were omitted due to them being not applicable.
4. The effective permit identifies seven PBRs and two Standard Exemptions as active preconstruction authorizations at the site. However, the submitted OP-REQ1 and OP-PBRSUP only identify three PBRs (106.261, 160.262, and 106.264) and no Standard Exemptions. Please confirm the submitted forms are correct, and thus, indicating that four PBRS and two Standard Exemptions, currently existing in the effective permit, are no longer utilized at the site and are to be removed from the permit.

1. Relatedly, the NSR database indicates PBR Registration No. 144265 consists of PBRs 106.261, 106.262, and 106.472. However, there is no reference to PBR 106.472 in this application nor is it in the effective permit. Please advise.
2. Relatedly, the effective permit identifies PBRs 106.512 and 106.512 as authorizations for units EEFIREWC02 and EEPORTP02, respectively. Based on the renewal application submittal, the units are not being removed from the permit, nor are PBRs 106.511 or 106.512 included on the submitted application OP-REQ1 or OP-PBRSUP. Please advise.
 - i. Also, the respective PBR authorizations are the only preconstruction authorizations identified in the effective permit for the two units. Thus, if the PBRs are no longer the authorizing mechanism, another NSR mechanism must be identified for the two units.
1. The previous Title V permit action, a minor revision issued 9/29/2023 (Project 33882) indicated PBR 106.412 was being added as an additional authorization for unit FUELDISP as long with Standard Exemption (SE) No. 51. The submitted renewal application contains no reference to either PBR 106.412 or SE 51. Please advise.
5. Please note that *all changes* (additions and/or deletions and/or updates), including those associated with preconstruction authorizations, *must* be indicated as changes/revision items and listed on the OP-2 and OP-SUMR, as appropriate, for any permit application.
6. Accordingly, based on the above items, please submit updated forms as appropriate. Please provide at your earliest opportunity, but please no later than COB on Friday, March 28, 2025.

In addition to the above information please be aware that EPA has, on occasion, objected to Title V permits based on the following items at one time or another:

- a. NSR permit and PBR monitoring sufficiency – please refer to our periodic monitoring guidance for reference of monitoring that EPA has, so far, considered sufficient.
- b. Reference to confidential business information (CBI) in NSR permits and PBR submittals.
- c. High-level terms in the SOP Applicable Requirement Summary Table. The high-level terms are sometimes used in SOPs when unit attribute forms have not yet been updated due to regulatory amendments.
- d. Accuracy of PBR information provided on the OP-PBRSUP supplemental table and in the permit. Please refer to Forms OP-PBRSUP and OP-REQ1 Instructions.

If you have any questions or concerns on any of the above items, please do not hesitate to contact me.

I look forward to working with you on this project.

Thank you.

RE: Sasol Chemicals (USA) LLC
Greens Bayou Site
Permit No. 01254 Title V Renewal
Houston, Harris County
Regulated Entity No. RN110497567
Customer No. CN600360622

Dear Mr. Meyer:

On behalf of Sasol Chemicals (USA) LLC, attached is the updated Permit No. 01254 Title V Renewal application for the Greens Bayou Site. This renewal removes EPNs from the Title V permit to reflect the previous year's NSR renewal, and updates administrative forms. Please also see the responses below in [blue](#) to your comments.

1. The cover letter states: "Please note that we are currently awaiting the approval of the NSR Permit No. 20686 renewal from the agency." Please advise whether there will be additional changes required for this renewal application as a result of the issuance of the pending amendment/renewal of NSR No. 20686. If so, please submit all appropriate and related documentation.

[There will be no additional changes.](#)

2. The "Version No./Date" indicated on the submitted OP-REQ1, question XII.I. (page 89) for each of the PBRs, are actually issuance dates of the related PBR registration. Please submit a revised OP-REQ1 page 89 which identifies PBR version date, instead of the issuance date of the PBR registration.

[An updated Form OP-REQ1 is provided with this submittal.](#)

HEADQUARTERS

12700 Park Central Dr, Ste 600, Dallas, TX 75251 / P 800.229.6655 / P 972.661.8100 / F 972.385.9203

3. The submitted OP-PBRSUP contains only Tables A and D. Please confirm that both Tables B and C were omitted due to them being not applicable.

Table B has been added, but Table C is still omitted.

4. The effective permit identifies seven PBRs and two Standard Exemptions as active preconstruction authorizations at the site. However, the submitted OP-REQ1 and OP-PBRSUP only identify three PBRs (106.261, 160.262, and 106.264) and no Standard Exemptions. Please confirm the submitted forms are correct, and thus, indicating that four PBRs and two Standard Exemptions, currently existing in the effective permit, are no longer utilized at the site and are to be removed from the permit.

1. Relatedly, the NSR database indicates PBR Registration No. 144265 consists of PBRs 106.261, 106.262, and 106.472. However, there is no reference to PBR 106.472 in this application nor is it in the effective permit. Please advise.

Updated

2. Relatedly, the effective permit identifies PBRs 106.511 and 106.512 as authorizations for units EEFIREWC02 and EEPORTP02, respectively. Based on the renewal application submittal, the units are not being removed from the permit, nor are PBRs 106.511 or 106.512 included on the submitted application OP-REQ1 or OP-PBRSUP. Please advise.

Updated

- i. Also, the respective PBR authorizations are the only preconstruction authorizations identified in the effective permit for the two units. Thus, if the PBRs are no longer the authorizing mechanism, another NSR mechanism must be identified for the two units.

Understood

3. The previous Title V permit action, a minor revision issued 9/29/2023 (Project 33882) indicated PBR 106.412 was being added as an additional authorization for unit FUELDISP as long with Standard Exemption (SE) No. 51. The submitted renewal application contains no reference to either PBR 106.412 or SE 51. Please advise.

Updated

5. Please note that *all changes* (additions and/or deletions and/or updates), including those associated with preconstruction authorizations, *must* be indicated as changes/revision items and listed on the OP-2 and OP-SUMR, as appropriate, for any permit application.

The forms are updated and provided with this submittal.

6. Accordingly, based on the above items, please submit updated forms as appropriate. Please provide at your earliest opportunity, but please no later than COB on Friday, April 4, 2025.

Attached is the updated application in its entirety.

If you have any questions, please email me at anirudh.srivatsav@trinityconsultants.com or call me at (832) 477-3279, or contact Ms. Kathy Winkler, Sasol Chemicals (USA) LLC, at Kathy.winkler@us.sasol.com or 832-783-6467.
