- ▶ Form OP-UA2, Table 5 for 40 CFR Part 60 Subpart IIII is being submitted since TCEQ has made updates to the form since the last time it was submitted for units EMRGEN1, EMRGEN2B, and EMRGEN6.
- ▶ Form OP-PBR SUP is being submitted to include the latest units authorized by PBRs and latest issued PBR registrations.
- ▶ Update the pre-construction authorizations for various existing units as shown on OP-SUMR.
- ▶ Form OP-REQ1 has been updated to reflect the latest changes to the site-wide terms and conditions.
- ▶ No changes are being made to the Major NSR Summary Table, except for updating the issuance date of NSR Permit No. 109923/GHG PSDTX159/PSDTX1502. Amendment/Renewal NSR project no. 370124 is still pending and isn't expected to be issued prior to submittal of the renewal application. The AMOC approves the use of portable electrochemical detector/sensor instead of colorimetric detector tubes.
- ▶ Add wastewater tanks TK-2601A, TK-2601B, and TK-2602 to the permit with their applicable requirements.
- ▶ Remove the 40 CFR Part 60, Subpart Kb requirements from tanks TK-6001, TK-6002, TK-6003, TK-6004, TK-6005, and TK-6006 and add a permit shield for the same rule.

Dear Mr. Cummings:

This correspondence is in response to Buckeye Texas Processing LLC's (Buckeye's) March 16, 2023 request for an alternative H₂S monitoring at the Corpus Christi Refinery in Corpus Christi, Nueces County to demonstrate compliance with permit limits.

We understand that the above-referenced permits require storage tanks to be at or below 24 ppmv H₂S during normal operations and maintenance, start-up or shutdown activities. The permit conditions further stipulate that compliance with this limit shall be demonstrated in each tank's vapor space using a colorimetric detector tube is required at least annually or within 60 days of change of service of any tank. The permit condition allows the TCEQ Region to approve alternative methods. Additionally, Buckeye has shown that there are no other state (30 TAC §112) or federal (40 CFR 60, Subpart Ja or Kb) regulatory requirements for H₂S monitoring that are applicable to these tanks.

The information provided by Buckeye on use of the proposed portable electrochemical monitoring equipment (such as a Honeywell Model PGM6228 5-gas monitor with C03-0907-001 sensors, as well as other similar devices) included manufacturer's specifications, functionality, measurement techniques, precision, accuracy, span, and range. Supporting documentation also showed equivalent monitors have been approved by the U.S. EPA through alternative monitoring plans (AMPs) and the TCEQ is familiar with many of these models.

The Texas Commission on Environmental Quality (TCEQ) Executive Director has made a final decision to approve your AMOC request under attached conditions. Please maintain these conditions at the site with all permit documentation.

This AMOC approval may supersede certain requirements or representations in Permit Nos. 109923 and PSDTX1502. To ensure effective and consistent enforceability, we request that Buckeye incorporate this AMOC into the permit(s) through submittal of alteration(s) no later than 90 days after this approval.

This approval may also change applicable requirements for the site, which are identified in the site operating permit (SOP) O3869. The TCEQ recommends the submittal of a SOP administrative revision if any changes are necessary. Changes meeting the criteria for an administrative revision can be operated before issuance of the revision if a complete application is submitted to the TCEQ and this information is maintained with the SOP records at the site.

Corpus Christi, Nueces County

- A. Demonstrations of compliance with NSR Permit Conditions' H₂S tank vapor space limitations (24 ppmv) during routine operations and uncontrolled MSS activities may optionally use a portable electrochemical detector/sensor instead of colorimetric detector tubes. Portable electrochemical detectors may not be used for H₂S concentration compliance demonstrations when vapor streams are sent a control device during MSS or are subject to 40 CFR 60, Subpart Ja.
- B. Electrochemical detectors meeting the following specifications may be used to determine H₂S in tank vapor spaces:
1. Manufacturer's recommendations and guidelines regarding training, operation, sampling time, storage, and maintenance as specified for the given detector/meter/sensor model shall be followed.
 2. The appropriate detector span shall be based on the expected actual concentration range in a given tank's vapor space. The detection limit for the electrochemical detector shall be either no more than one-tenth of the limit that is being complied with or has a detection limit that is no more than one half of a reading that followed this condition and was confirmed from the given sample point within the last 12 hours. The H₂S concentration measured must also be less than 80% of the manufacturer's specified span/range for the electrochemical detector.
 3. Detectors shall meet the following:
 - i. For spans of 0 - 199 ppm: Precision/Resolution – 2 ppm, Repeatability/Standard Deviation – 10%
 - ii. For spans of 200 - 1999 ppm: Precision/Resolution – 20 ppm, Repeatability/Standard Deviation – 10%
 - iii. For spans of 2000 ppm or more: Precision/Resolution – 100 ppm, Repeatability/Standard Deviation – 10%
 4. A functionality test shall be performed on the electrochemical detector within 24 hours of use with a certified standard of at least 50% of the detector's resolution (1 ppm, 10 ppm, or 50 ppm, respectively for the spans listed above).
 5. Records, including the date/time and test results, shall be maintained.
- C. All sample locations, monitoring frequencies, monitoring techniques, recordkeeping, and reporting requirements remain unchanged from those in NSR Permit Conditions.
