THE HONORABLE ROBERT NICHOLS  
TEXAS SENATE  
PO BOX 12068  
AUSTIN TX 78711-2068

Re: Accepted Federal Operating Permit Renewal Application

Regulated Entity Number: RN101943868  
Customer Reference Number: CN603256413

Dear Senator Nichols:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) renewal application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-96.101388,32.126388&level=13>.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

**INTRODUCTION**  
**FEDERAL OPERATING PERMIT No. O57**  
**TRINIDAD STEAM ELECTRIC STATION (RN101943868)**  
**LUMINANT GENERATION COMPANY LLC (CN603256413)**  
**FEBRUARY 2025**

Luminant Generation Company LLC (Luminant) is applying for renewal of Federal Operating Permit (FOP) No. O57, which authorizes operation of the Trinidad Steam Electric Station (TRSES) in Henderson County near Trinidad, Texas. This February 2025 application also requests FOP revisions. The application is a complete application so that all representations related to FOP No. O57 (i.e., unchanged previous representations, as well as revisions) can be found in this application document.

Process Description

TRSES is an electric utility site consisting of a steam generating unit (Boiler No. 9) and its ancillary equipment. Also present at the site are two 2-MW diesel-fired emergency generators, a 300-kW diesel-fired emergency generator, and storage tanks. Luminant owns and operates this site.

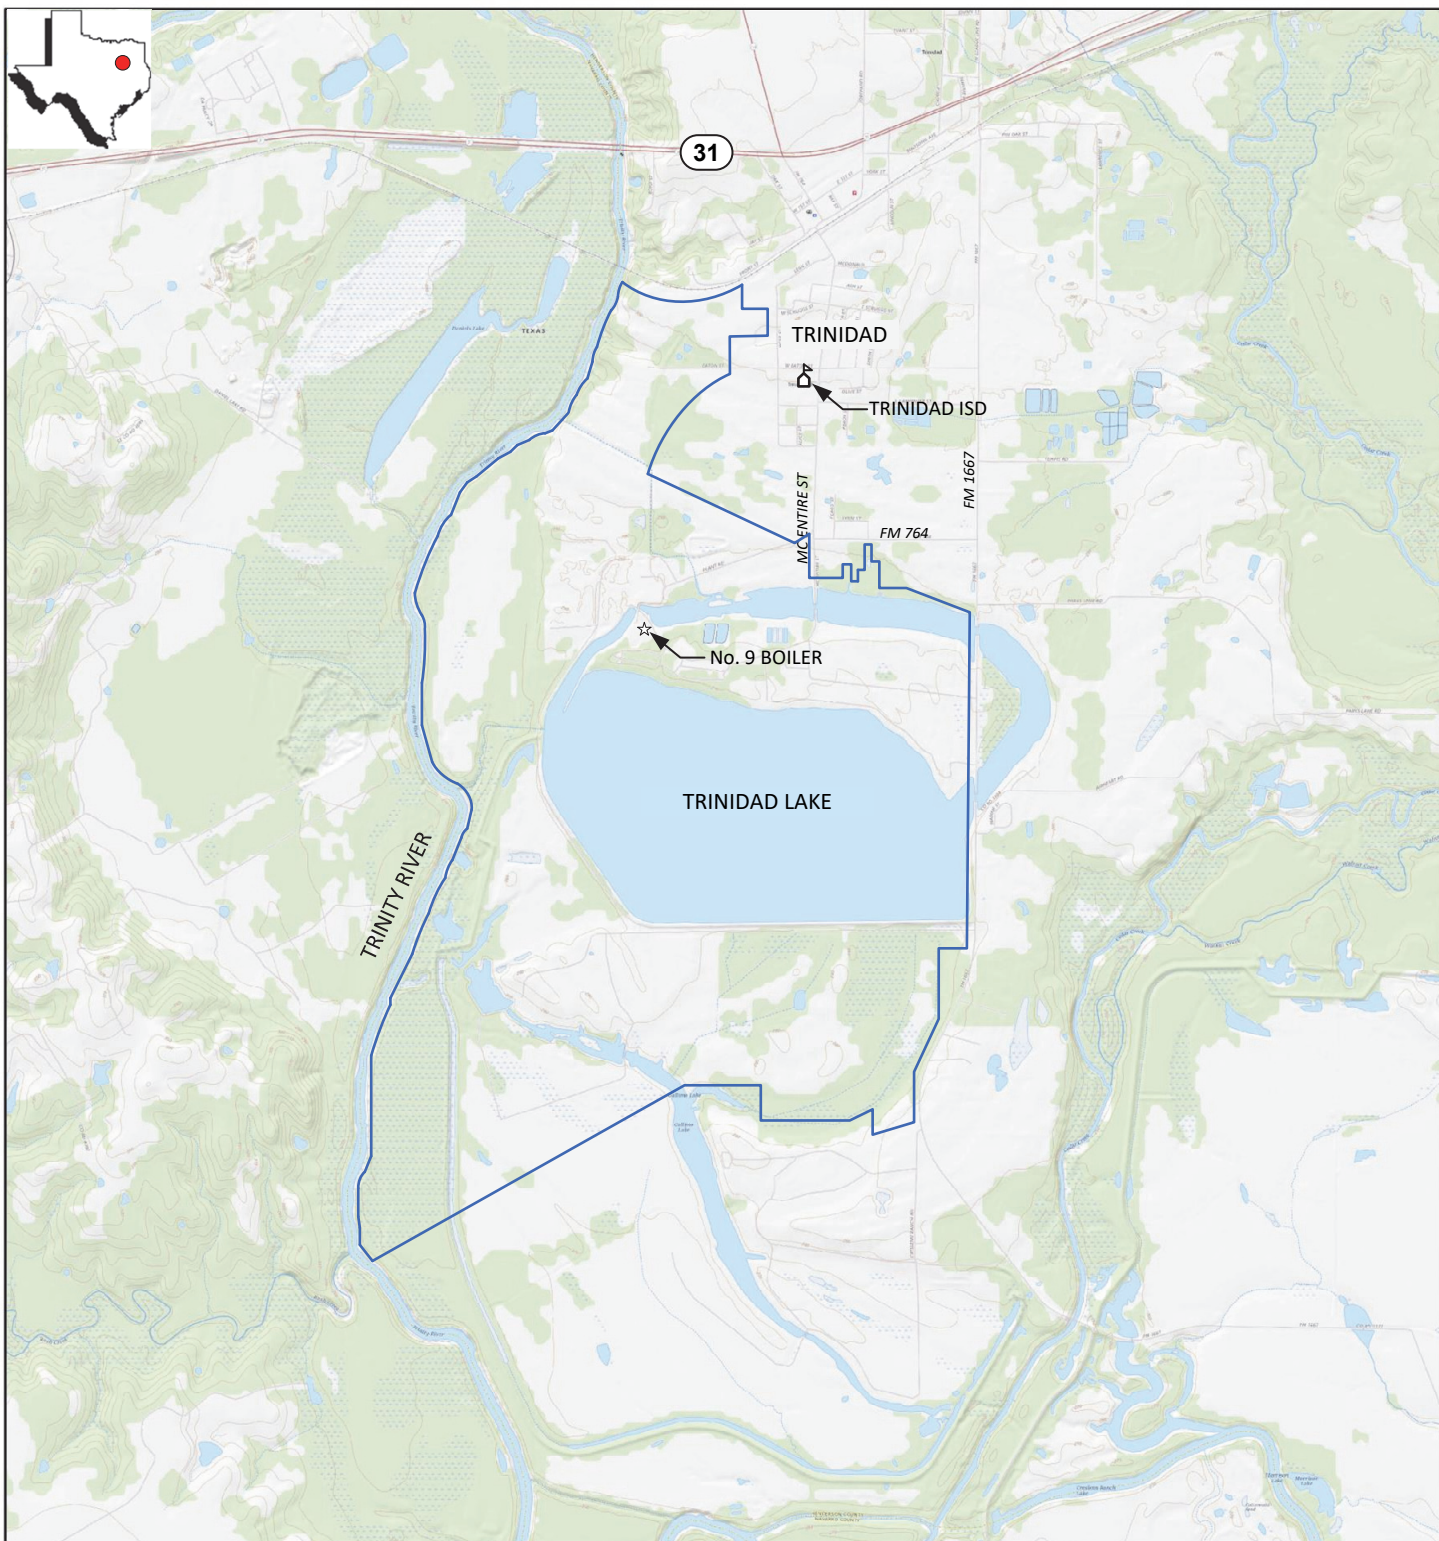

Boiler No. 9 is a tangential fired, drum type steam generating unit manufactured by Combustion Engineering. It combusts natural gas, fuel oil, or both in the pressurized furnace to convert the boiler feedwater into steam. Forced-draft fans furnish adequate air for complete combustion of the fuel. The steam energy is used to turn a steam-driven turbo-generator (Unit 6), which is designed for a nominal net output of 240 megawatts (MW).

The three emergency generators are stationary internal combustion engines that provide emergency electrical power. These diesel generators can also combust No. 2 fuel oil.

The storage tanks can hold fuel oil, diesel fuel, gasoline, lubricating oils, used oil, and various other liquids. Organic liquid loading and unloading of tank-truck tanks and other organic liquid transfers may occur at the site.

Revisions

Proposed updates and revisions are listed in the OP-2 form and shown in **bold red font** throughout the application. The revisions include the addition of the 300-kW diesel-fired emergency generator and the inclusion of Form OP-PBRSUP. Per TCEQ guidance given to Luminant, emissions units listed only on Form OP-PBRSUP and nowhere else in the application are not included on Form OP-SUMR.

**VI. Periodic Monitoring Case-By-Case**

**Periodic Monitoring Text:**

Visible emissions observations shall be made and recorded. A visible emissions observation is not required for sources that do not operate at any time during the calendar quarter.

Note that to properly determine the presence of visible emissions, all sources must be in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 miles, away from the emission source during the observation. The observer shall select a position where the sun is not directly in the observer's eyes. If the observations cannot be conducted due to weather conditions, the date, time, and specific weather conditions shall be recorded. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor.

If visible emissions are observed, the permit holder shall report a deviation. As an alternative, the permit holder may determine the opacity consistent with Test Method 9, as soon as practicable, but no later than 24 hours after observing visible emissions. If a Test Method 9 is performed, the opacity limit is 30%, six-minute average. If the result of the Test Method 9 is six-minute average above 30%, the permit holder shall report a deviation.

Periodic Monitoring Text:

For purposes of the annual compliance certification under 122.146, the permittee is required to monitor the sulfur content of the liquid fuel in accordance with fuel sampling requirements specified in 40 CFR Part 75, Appendix D, 2.2 Oil Sampling and Analysis. If the average sulfur content is determined to be less than or equal to 0.7 percent by weight, the Responsible Official may certify that the boiler is in compliance with the concentration limitation established by 112.9(a) and 112.9(b). If the liquid fuel sulfur content exceeds 0.7 percent by weight, the permittee shall list this occurrence as a deviation on the next deviation report as required under 122.145(2).

## Periodic Monitoring Options Table

EMISSION	INDICATOR MONITORED	PERIODIC MONITORING REQUIREMENT	MIN. FREQ.	AVERAGE	PM OPTION NUMBER
	3. Opacity	Measure and record the opacity with a continuous opacity monitoring system (COMS). The COMS shall be operated in accordance with 40 CFR § 60.13. The maximum opacity is the applicable or corresponding opacity limit. If there is no applicable or corresponding opacity limit, a maximum opacity shall be established using the most recent performance test. Any opacity readings that are above the opacity limit from the underlying applicable requirement shall be considered and reported as a deviation.	six times per minute	Six minutes	PM-P-003
PM Continued	<b>COMBUSTION UNITS FUELED BY PIPELINE NATURAL GAS, LIQUID PETROLEUM GAS, OR FIELD GAS W/ &lt; 10GR TOTAL SULFUR PER 100 CUBIC FEET</b>				
	1. Fuel Type	Record the type of fuel used by the unit. If an alternate fuel is fired, either alone or in combination with the specified gas, for a period greater than or equal to 24 consecutive hours it shall be considered and reported as a deviation or the permit holder shall conduct an observation of the stationary vent for each such period to determine if visible emissions are observed. Any time an alternate fuel is fired for a period of greater than 7 consecutive days then visible emissions observations will be conducted no less than once per week. Documentation of all observations shall be maintained. If visible emissions are present during the firing of an alternate fuel, the permit holder shall either list this occurrence as a deviation or the permit holder may determine the opacity consistent with Test Method 9. Any opacity readings that are above the opacity limit from the underlying applicable requirement shall be reported as a deviation.	Annually or at any time an alternate fuel is used	n/a	PM-P-029
	2. Fuel Type	Record the type of fuel used by the unit. If an alternate fuel is fired, either alone or in combination with the specified gas, it shall be considered and reported as a deviation.	Annually	n/a	PM-P-030
	<b>UNITS WITH A CONTROL DEVICE: FABRIC FILTER</b>				
	1. Pressure Drop	Measure and record the pressure drop. Establish a minimum and maximum pressure drop using the most recent performance test, manufacturer's recommendations, engineering calculations, and/or historical data. The monitoring instrumentation shall be calibrated, maintained, and operated in accordance with manufacturer's specifications or other written procedures. Any monitoring data below the minimum limit or above the maximum limit shall be considered and reported as a deviation.	once per week	n/a	PM-P-004
	2. Bag Leak Detection Signal (Analog System)	Monitor and record the bag leak detection signal. Operate bag leak detector in accordance with EPA's, Office of Air Quality Planning and Standards, Fabric Filter Bag Leak Detection Guidance (EPA-454/R-98-015). Establish a maximum signal using the Fabric Filter Bag Leak Detection Guidance. The monitoring instrumentation shall be calibrated, maintained, and operated in accordance with manufacturer's specifications or other written procedures. Any monitoring data above a maximum limit shall be considered and reported as a deviation.	four times per hour	Establish per EPA guidance (EPA-454/R-98-015)	PM-P-005
