TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Protecting Texas by Reducing and Preventing Pollution

April 1, 2025

THE HONORABLE PAUL BETTENCOURT
TEXAS SENATE
PO BOX 12068

Re: Accepted Federal Operating Permit Renewal Application

Permit Number: O3191
Trunkline Gas Company, LLC
Cypress Compressor Station
Cypress, Harris County
Regulated Entity Number: RN100225556
Customer Reference Number: CN600286512

Dear Senator Bettencourt:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) renewal application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-95.657777,29.99&level=13>.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

The Honorable Paul Bettencourt

2.0 PROCESS DESCRIPTION

This section describes the processes that are conducted at the Station.

Natural gas is received at the Cypress Compressor Station and sent through an inlet separator, where entrained liquids are removed from the gas stream by gravitational forces. Liquids removed from the gas stream are collected and stored in a condensate tank, ID No. TANK14, and are removed from the station via tanker truck when necessary. After liquids are removed from the gas stream, the gas is then compressed and exits the station at a higher pressure.
