Dear Senator Perry:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) initial issuance application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-102.050833,33.839166&level=13>.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

The Honorable Charles Perry

3. PROCESS DESCRIPTION

Anton Wolfcamp Battery 1

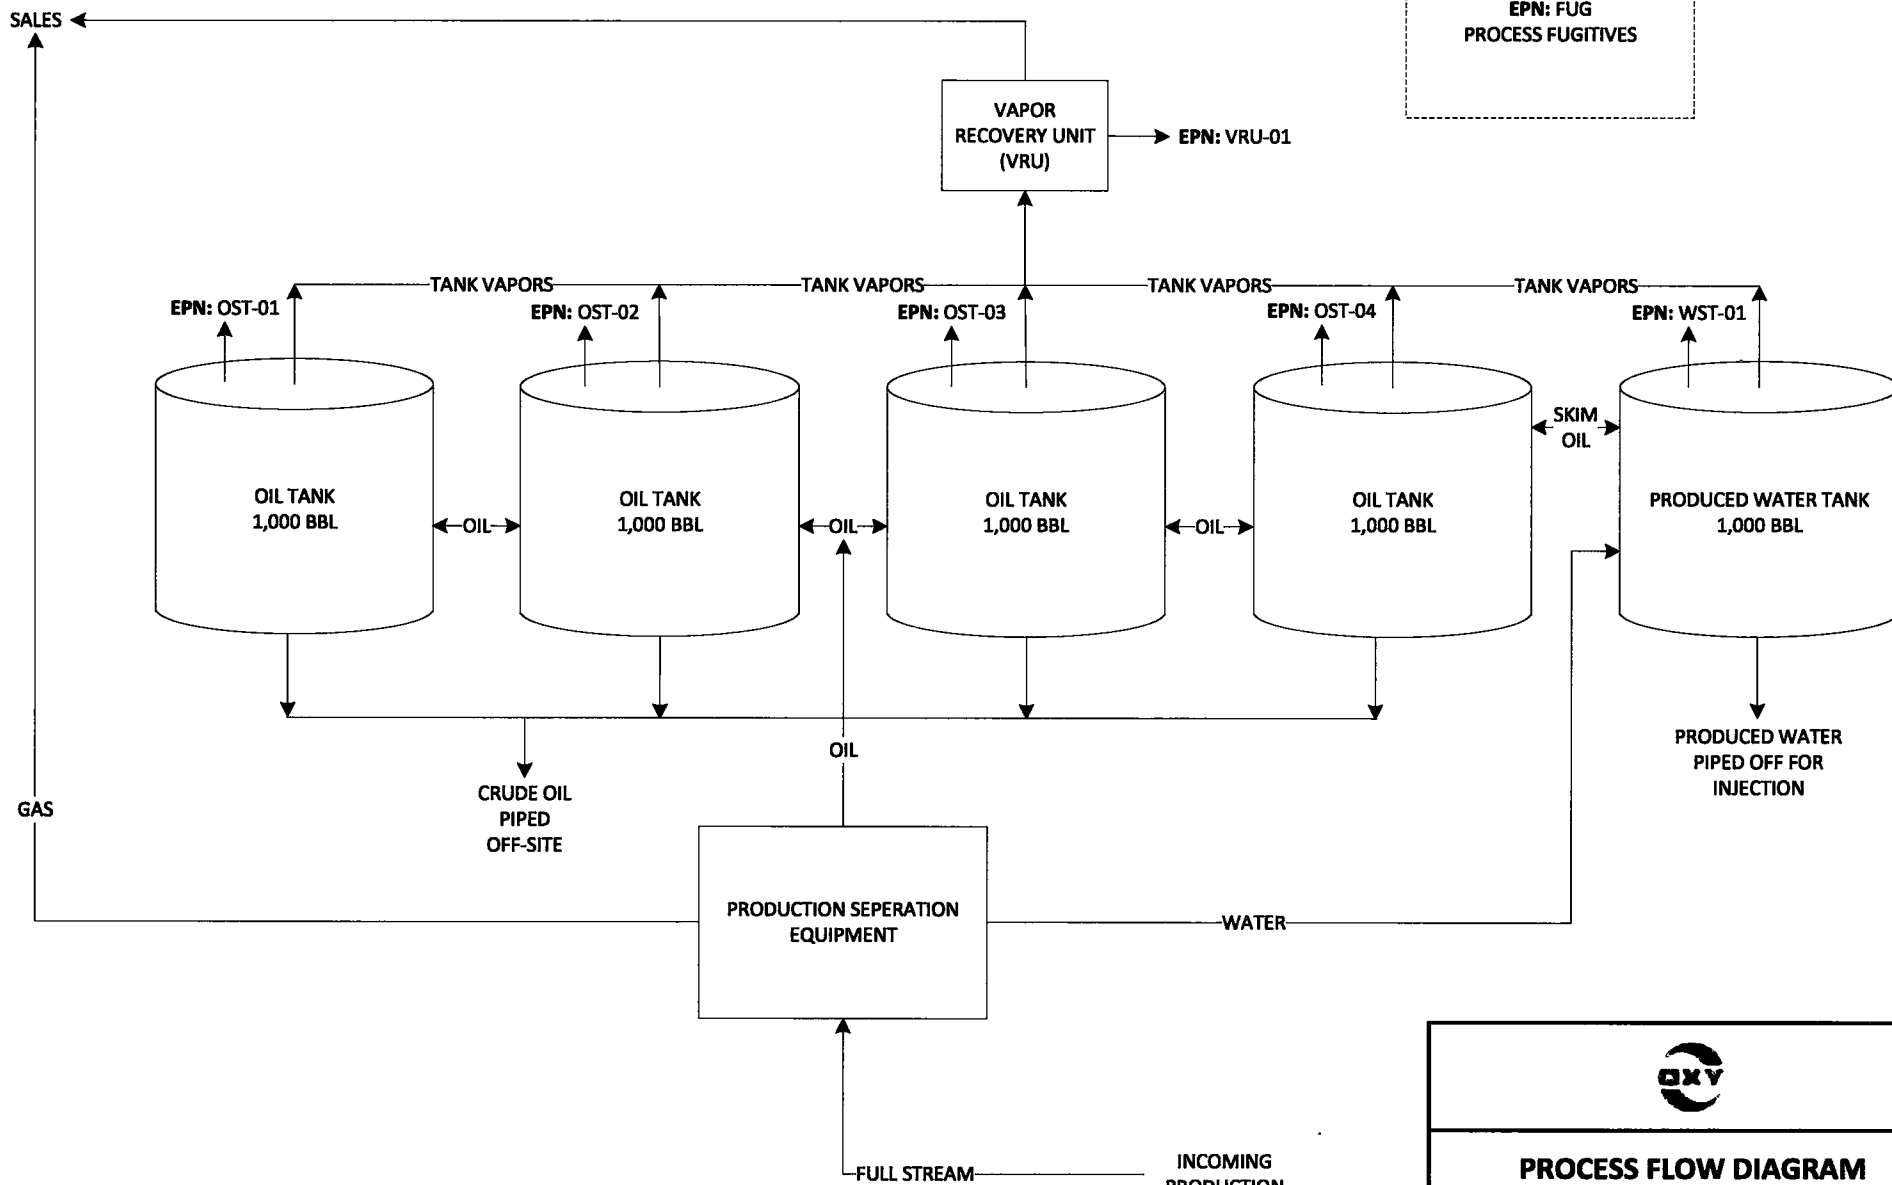

Process fluids enter the plant from the field and pass through separation equipment where gas is sent to sales, oil is sent to four 1,000 bbl oil storage tanks (EPNs OST-01 through OST-04), and produced water is sent to one 1,000 bbl water storage tank (EPN WST-01). The tanks are controlled by an electric drive vapor recovery unit (EPN VRU-01), which routes the tank vapors to sales. Crude oil/condensate and produced water are both piped offsite.

A process flow diagram is included as Figure 3-1.

AICFU Central Water Station

Produced water from production field operations arrives at the AICFU Central Water Station and is routed to the settling tank (TK-1). Water from the settling tank is sent to the suction tank (TK-W1) and is then reinjected. Residual oil from the settling tank is sent to the skim tank (TK-2) and is then piped off-site. A vapor recovery unit (VRU, EPN TK-FUG) controls emissions from the storage tanks. Vapors captured by the VRU are routed to the inlet of the Anton CO₂ Reinjection Facility. A flare (EPN FLARE-WS) controls storage tank emissions during VRU downtime.

A process flow diagram is included as Figure 3-2.

Public Involvement Plan Form for Permit and Registration Applications

The Public Involvement Plan is intended to provide applicants and the agency with information about how public outreach will be accomplished for certain types of applications in certain geographical areas of the state. It is intended to apply to new activities; major changes at existing plants, facilities, and processes; and to activities which are likely to have significant interest from the public. This preliminary screening is designed to identify applications that will benefit from an initial assessment of the need for enhanced public outreach.

All applicable sections of this form should be completed and submitted with the permit or registration application. For instructions on how to complete this form, see TCEQ-20960-inst.

Section 1. Preliminary Screening

- ☒ New Permit or Registration Application
☐ New Activity - modification, registration, amendment, facility, etc. (see instructions)

If neither of the above boxes are checked, completion of the form is not required and does not need to be submitted.

Section 2. Secondary Screening

- ☒ Requires public notice,
☐ Considered to have significant public interest, **and**
☐ Located within any of the following geographical locations:

- Austin
- Dallas
- Fort Worth
- Houston
- San Antonio
- West Texas
- Texas Panhandle
- Along the Texas/Mexico Border
- Other geographical locations should be decided on a case-by-case basis

**If all the above boxes are not checked, a Public Involvement Plan is not necessary.
Stop after Section 2 and submit the form.**

- ☒ Public Involvement Plan not applicable to this application. Provide **brief** explanation.

The project is not considered to have significant public interest and is not located within any of the listed geographical locations.

7. POTENTIALLY APPLICABLE REQUIREMENT INFORMATION

- Form OP-REQ1 - Application Area-Wide Applicability Determinations & General Information
- Form OP-REQ3 - Applicable Requirements Summary

Note that per the Form OP-REQ1 instructions, if the only applicable requirement that triggers CAM is a case-by-case NSR authorization, then Form OP-REQ1 question XI.L.1 should be marked "No" as CAM will be addressed in the NSR permit. Emission limitations in PBRs and Standard Permit authorizations that trigger CAM must be addressed in the Title V permit.

AICFU Central Water Station tank TK-1 has a pre-control Potential to Emit (PTE) exceeding the Title V major source threshold. CAM for this tank is addressed in case-by-case NSR Permit 171386.

The Anton Wolfcamp Battery 1 tanks each have a pre-control PTE below the Title V major source threshold. Therefore, CAM does not apply to these tanks.

1. EXECUTIVE SUMMARY

Occidental Permian Ltd. (Oxy) owns and operates the AICFU Central Water Station located 7 miles northeast of Anton, Hale County, Texas. The facility processes water produced by oil and gas field facilities. The AICFU Central Water Station has been assigned Texas Commission on Environmental Quality (TCEQ) Regulated Entity No. RN102167871 and Customer No. CN600755086. The site is currently authorized under New Source Review (NSR) Permit No. 171386 with the Anton CO₂ Reinjection Facility.

Oxy also owns and operates Anton Wolfcamp Battery 1, which is part of the same site for federal permitting purposes because it is located within ¼ mile and shares equipment with the Anton CO₂ Reinjection Facility. Anton Wolfcamp Battery 1 has been assigned TCEQ Regulated Entity No. RN102417391 and Customer No. CN600755086, and it is authorized under Permit by Rule (PBR) Registration No. 49532.

With this submittal, Oxy is providing the full application to obtain an initial Site Operating Permit (SOP) for the Anton Wolfcamp Battery 1 and AICFU Central Water Station. Section 2 contains an area map and plot plan, and section 3 contains a process description and process flow diagram. Sections 4 through 9 contain the required forms.

2. AREA MAP AND PLOT PLAN

Figure 2-1 Area Map shows the facility location relative to nearby topographic features. This map shows a 3,000-foot radius. As indicated by the area map, no schools are located within 3,000 feet of the facility location.

3. PROCESS DESCRIPTION

Anton Wolfcamp Battery 1

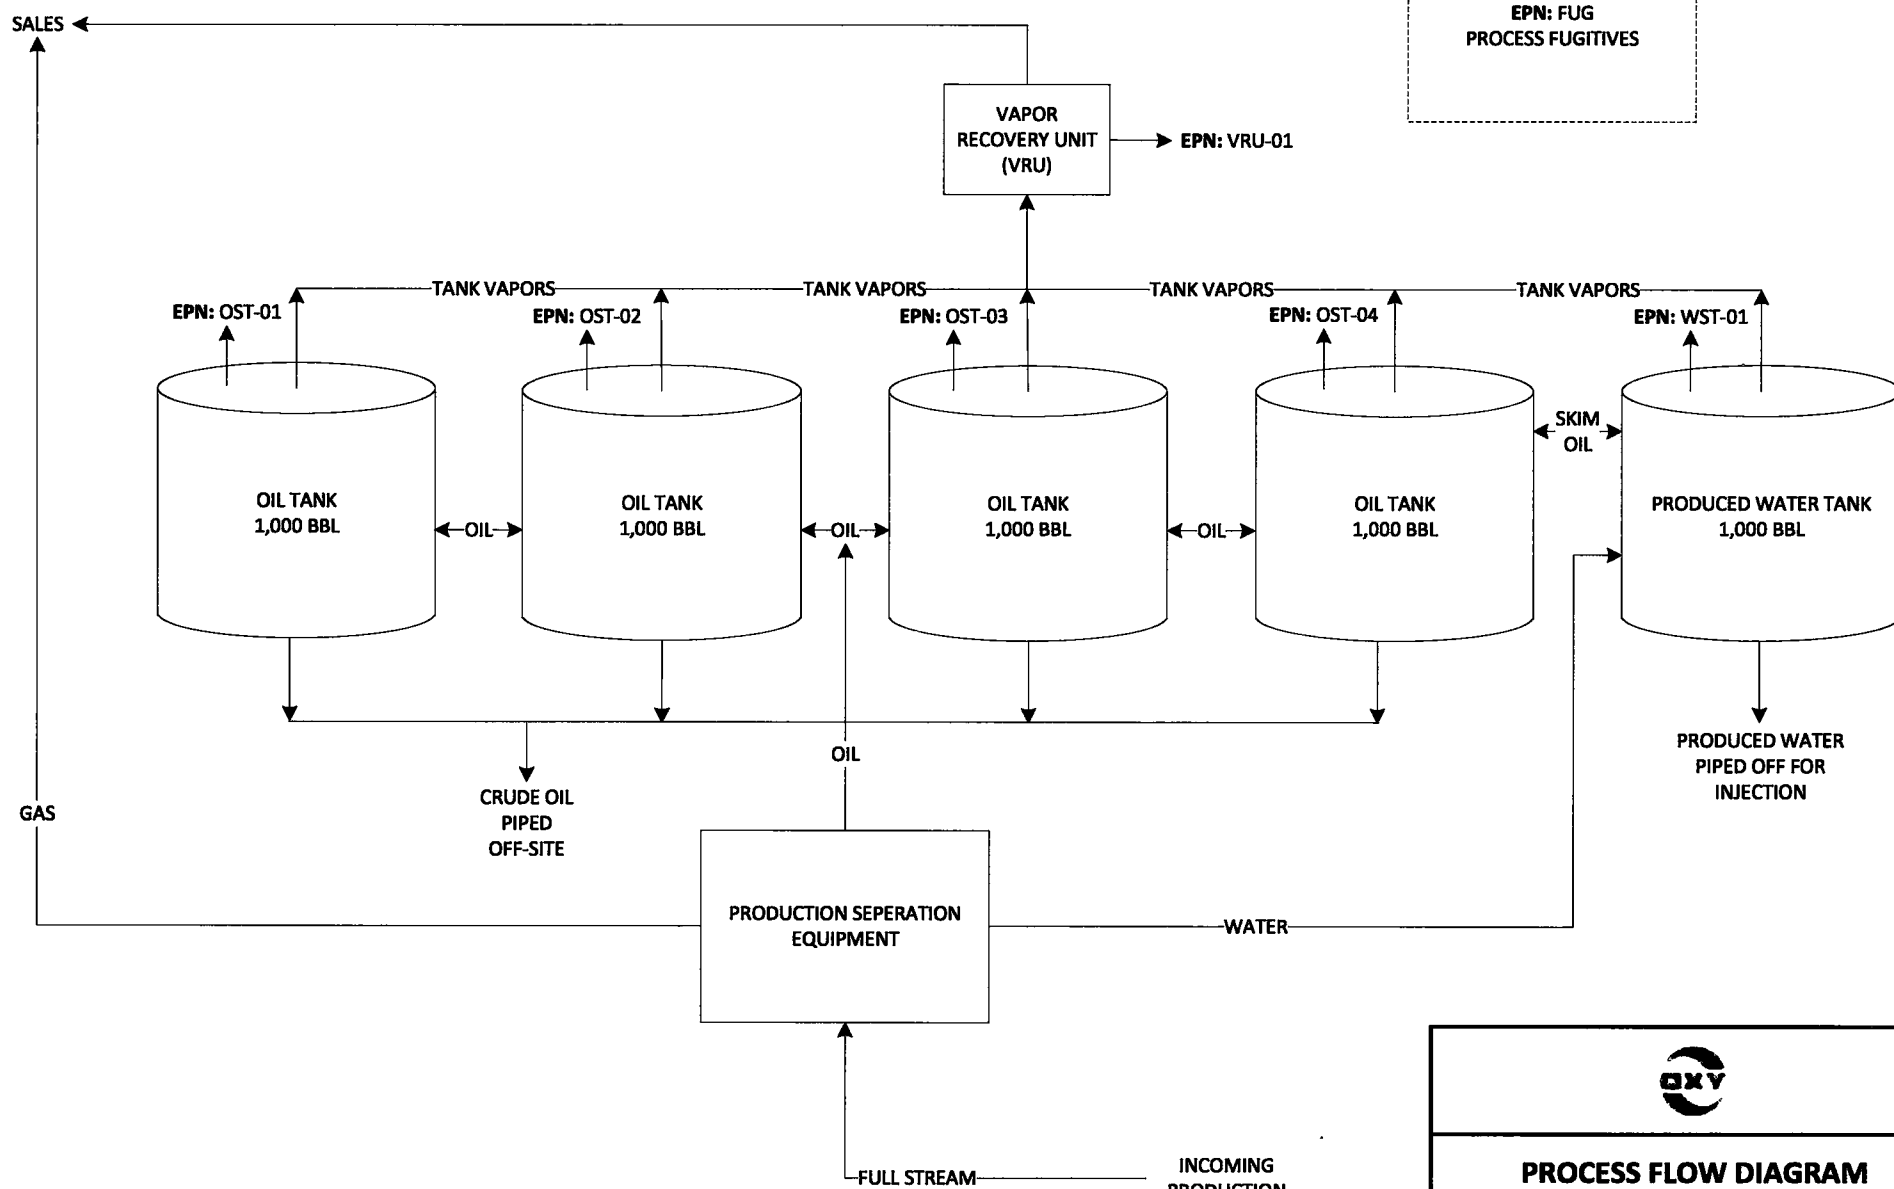

Process fluids enter the plant from the field and pass through separation equipment where gas is sent to sales, oil is sent to four 1,000 bbl oil storage tanks (EPNs OST-01 through OST-04), and produced water is sent to one 1,000 bbl water storage tank (EPN WST-01). The tanks are controlled by an electric drive vapor recovery unit (EPN VRU-01), which routes the tank vapors to sales. Crude oil/condensate and produced water are both piped offsite.

A process flow diagram is included as Figure 3-1.

AICFU Central Water Station

Produced water from production field operations arrives at the AICFU Central Water Station and is routed to the settling tank (TK-1). Water from the settling tank is sent to the suction tank (TK-W1) and is then reinjected. Residual oil from the settling tank is sent to the skim tank (TK-2) and is then piped off-site. A vapor recovery unit (VRU, EPN TK-FUG) controls emissions from the storage tanks. Vapors captured by the VRU are routed to the inlet of the Anton CO₂ ReInjection Facility. A flare (EPN FLARE-WS) controls storage tank emissions during VRU downtime.

A process flow diagram is included as Figure 3-2.

7. POTENTIALLY APPLICABLE REQUIREMENT INFORMATION

- Form OP-REQ1 - Application Area-Wide Applicability Determinations & General Information
- Form OP-REQ3 - Applicable Requirements Summary

Note that per the Form OP-REQ1 instructions, if the only applicable requirement that triggers CAM is a case-by-case NSR authorization, then Form OP-REQ1 question XI.L.1 should be marked "No" as CAM will be addressed in the NSR permit. Emission limitations in PBRs and Standard Permit authorizations that trigger CAM must be addressed in the Title V permit.

AICFU Central Water Station tank TK-1 has a pre-control Potential to Emit (PTE) exceeding the Title V major source threshold. CAM for this tank is addressed in case-by-case NSR Permit 171386.

The Anton Wolfcamp Battery 1 tanks each have a pre-control PTE below the Title V major source threshold. Therefore, CAM does not apply to these tanks.

Ms. Femi Serrano

I am conducting the initial review of the subject application. The OP-CRO1 form and STEERS application you have submitted are showing Mr. Mario Guerrero as Duly Authorized Representative (DAR) and as the certifying official for this application. Mr. Guerrero cannot be entered into this initial SOP and cannot certify this application until I have received a completed and signed OP-DEL form designating Mr. Guerrero as DAR for this initial SOP. Please email a completed and signed OP-DEL form directly to me by close of business tomorrow, April 4, 2025, so your application is complete and can be accepted.

Thank you.

Ms. Thomas,

We understand that TCEQ requested submission of this form via STEERS; however, the system is not letting us enter anything for these new permits. Therefore, attached is the signed form. The hard copy is also mailed to you today. If you have any questions or need anything else, please don't hesitate to reach out.

Unfortunately, we are unable to certify the TV application at this time. To proceed, Maria A Guerrero must complete form OPDEL to be designated as DAR, which is essential for the certification of the Title V application. Taking this step will ensure that we can effectively move forward with the process.

Please send the form OPDEL to my attention by close of business.

Thank you,
