QUESTION 1 / ATTACHMENT A

QUESTION 1:

The form OP-PBRSUP must be submitted in its entirety, even if a table is left blank, tables A-D must all be submitted with the headers filled out. Additionally, all PBRs that are listed on the OP-REQ1, pg. 89, must be included on the OP-PBRSUP. Please include all claimed PBRs on the appropriate tables. Please note that on table A only registered PBRs should be included, if there is no registration number/date for that PBR it does not belong on table A.

RESPONSE TO QUESTION 1:

The updated form OP-PBRSUP is attached. It includes only registered PBRs on table A, tables A-D, and all PBRs listed on OP-REQ1, pg. 89 are included on the OP-PBRSUP.

QUESTION 1 / ATTACHMENT A

QUESTION 1:

The updated OP-PBR SUP that was submitted on 9/23/2025 requires one correction, all units with PBR 106.183 on Table A need to be removed as this is not a registered PBR. The second page of Table A (see picture below) needs to be omitted from this section entirely.

RESPONSE TO QUESTION 1:

The updated form OP-PBR SUP is attached. NOTE: The above units were inadvertently placed on Table A and should have been included on Table B. The updated OP-PBR SUP includes all Tables with the updated Table B with the above units listed on it. The only other changes to all other tables on the OP-PBR SUP is the date. Also included is the signed OPCRO1 in which the hard copy is also being sent.

QUESTION 1 / ATTACHMENT A

QUESTION 1:

The updated OP-PBR SUP that was submitted on 9/23/2025 requires one correction, all units with PBR 106.183 on Table A need to be removed as this is not a registered PBR. The second page of Table A (see picture below) needs to be omitted from this section entirely.

RESPONSE TO QUESTION 1:

The updated form OP-PBR SUP is attached. NOTE: The above units were inadvertently placed on Table A and should have been included on Table B. The updated OP-PBR SUP includes all Tables with the updated Table B with the above units listed on it. The only other changes to all other tables on the OP-PBR SUP is the date. Also included is the signed OPCRO1 in which the hard copy is also being sent.

Introduction

Permit Number O-01760 was issued for Ellwood Texas Forge, L.P. (Ellwood) on October 15, 2020. This renewal application requests that this permit be renewed and revised to include changes to applicable regulations, new applicable regulations, and changes to application representations. This application includes the following attachments:

- Attachment 1: Site Information
- Attachment 2: Administrative Forms
- Attachment 3: Unit Attribute Forms
- Attachment 4: Applicability Forms

Attachment 1: Site Information

The plant is located at 12500 Amelia Drive in Houston, Harris County, Texas. The application area for Permit Number O-01760 is the Iron and Steel Forgings plant. Permit Number O-01760 was issued on October 15, 2020 and is subject to a 5-year renewal.

Three OP-NOTIFY requests have been submitted since the last renewal. The following are the equipment, authorizations, and dates of the OP-NOTIFY submissions:

March 2023 – Furnaces authorized by Permit by Rule (PBR) 106.183

ETFN requests that the permit be renewed in accordance with this application submittal.

Permit Area and Process Description

The Plant forges metal billets. Round billets of alloy steels, stainless steels, titanium alloys, and nickel base alloys are purchased and brought into the plant via railcar or truck. The billets are cut to the desired lengths (mults) with circular carbide saws or band saws using coolants to reduce friction during the cutting process. The mults are placed on metal trays and transported to the forging area with fork lifts. The mults are heated in natural gas-fired furnaces to allow the material to be formed. The temperature depends on the specific material being forged (formed).

Once heated, each mult is placed into a metal die that has been installed in a hydraulic forging press and is squeezed with high pressure to fill the cavity (shape) of the die. This yields a forging. After the forge operation and when required, forgings are reheated in other natural gas-fired furnaces and then cooled appropriately to develop specific mechanical properties within the forging. This process is called Heat Treating. These lower temperature furnaces are called heat treat furnaces and consist of two types: those that burn ambient combustion air and those with preheated combustion air. After cooling, the forgings are generally cleaned and then are stored until they are shipped to customers.

A site map, plot plan, and process flow diagram are included on the following pages.
