THE HONORABLE BRYAN HUGHES

Dear Senator Hughes:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) renewal application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-94.3625,32.188333&level=13>.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

1. EXECUTIVE SUMMARY

Louisiana-Pacific Corporation (LP) owns and operates an oriented strandboard (OSB) mill (Texas Commission on Environmental Quality [TCEQ] Air Account No. PB-0010-O) located in Carthage, Panola County, Texas (Carthage OSB Mill). LP operates under Texas Commission on Environmental Quality (TCEQ) Customer Number (CN) 600127534. The Carthage OSB Mill has been assigned TCEQ Regulated Entity Number (RN) 100215433.

Panola County is currently classified as an attainment/unclassified for all criteria pollutants, except for sulfur dioxide (SO₂). A portion of Panola County bordering Rusk County has been designated as non-attainment for the 2010 SO₂ 1-hour NAAQS. The Carthage OSB Mill is not located in this non-attainment region.¹ The primary Standard Industrial Classification (SIC) code of the mill is 2493. Thus, the site is subject to the Texas Federal Operating Permits Program according to Title 30 of the Texas Administrative Code Section 122.120 (30 TAC §122.120).

LP received a renewed Operating Permit No. O1200 on October 23, 2020. In accordance with 30 TAC §122.133, this renewal application is submitted 6 months prior to the expiration date of Operating Permit No. O1200. The following sections describe changes at the site resulting in updates to the operating permit and the contents of this renewal application.

1.1 Changes at the Site

Since the last renewal of Operating Permit No. O1200, three (3) administrative updates to the operating permit were issued on November 4, 2020, November 9, 2022, and November 17, 2023; one (1) minor revision to the operating permit was issued on December 7, 2021; and one (1) minor revision to the operating permit was submitted on September 26, 2025.² Two notifications of operational flexibility or off-permit changes have been submitted to the TCEQ since the last renewal of Operating Permit No. O1200, which are summarized below:

- ▶ LP authorized the replacement of two existing dryer Regenerative Thermal Oxidizers (RTOs) (Title V Unit IDs RTOEAST, RTOEASTSTK, RTOWEST, and RTOWESTSTK) with five new RTOs that have a single exhaust point (Title V Unit ID RTO1-5) via Standard Permit Registration No. 170473. The off-permit change notification was submitted on February 16, 2024 (Title V Project No. 36335). The new RTO authorization has since been incorporated into New Source Review (NSR) Permit No. 26002 and Standard Permit Registration No. 170473 has been voided. This change was included in the pending minor revision application submitted on September 26, 2025 (Title V Project No. 37195).
- ▶ LP removed an existing diesel fire water pump and replaced it with a similar generator (Title V Unit IDs FWP-1 and FWP-2, respectively). Emissions from the replacement fire water are authorized under 30 TAC §106.511 – *Portable and Emergency Engines and Turbines*. Aside from the NSR authorization, the new diesel fire water pump triggers new site-wide or unit specific applicable requirements under New Source Performance Standard Subpart IIII. The off-permit and operational flexibility change notification was submitted on August 10, 2023 (Title V Project No. 35498). LP has not yet submitted a

permit application for NSR Permit No. 26002 since the removal of Title V Unit ID FWP-1; therefore, this unit is still identified in the NSR permit though it is not physically on-site. LP plans to remove Title V Unit ID FWP-1 from NSR Permit No. 26002 during the next modification of the NSR permit.

1.2 Renewal Application Contents

Per TCEQ guidance, only the following items are required to be included in a renewal application.³

- ▶ TCEQ Forms OP-CRO1, OP-REQ1, OP-ACPS, OP-1, OP-2, and OP-PBRSUP

- ▶ Core Data Form, if applicable

- ▶ TCEQ Form OP-REQ3, if applicable requirements have changed
- ▶ TCEQ Form OP-MON, if applicable

Since this application is being submitted via STEERS, TCEQ Form OP-CRO1 is not required to be included per TCEQ guidance.

The following TCEQ unit attribute forms have been previously submitted for the site.

³ Per TCEQ guidance, Site Operating Permit (SOP) Renewal Application Guidance, http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_renewal.pdf, Date Accessed: January 13, 2025.

Columns or answers in the current TCEQ Form OP-UA1 have not changed from the previously submitted versions of TCEQ Form OP-UA1. Therefore, no changes or forms associated with this project are incorporated into the Title V permit as part of this renewal application. Therefore, TCEQ Form OP-UA1 is not included in this renewal application.

TCEQ Form OP-UA2 applies to the diesel emergency generator and fire-water pump located at the Carthage OSB Mill. The existing diesel fire water pump (Title V Unit ID FWP-1) was replaced (with Title V Unit ID FWP-2). Therefore, TCEQ Form OP-UA2 is included in this application with previously provided information for Title V Unit ID FWP-1 shown in strikethrough and information provided for new Title V Unit ID FWP-2. Information previously provided for Title V Unit ID GEN-2 have not changed. Therefore, Title V Unit ID GEN-2 is not included in TCEQ Form OP-UA2.

Columns or answers in the current TCEQ Form OP-UA3 Table 3 have changed from the version of TCEQ Form OP-UA3 Table 3 dated March 8, 2002. Therefore, Table 3 of TCEQ Form OP-UA3 is included in this renewal application for existing units in Operating Permit No. O-01200.

Columns or answers in the current TCEQ Form OP-UA4 Table 1a have not changed from the version of TCEQ Form OP-UA4 Table 1a dated August 14, 2007. Therefore, Table 1a of TCEQ Form OP-UA4 is not included in this renewal application for existing units in Operating Permit No. O-01200.

Columns or answers in the current TCEQ Form OP-UA6 have not changed from the previously submitted versions of TCEQ Form OP-UA6. Therefore, TCEQ Form OP-UA6 is not included in this renewal application for existing units in Operating Permit No. O-01200.

An updated TCEQ Form OP-UA15 was provided for the replacement dryer RTOs in the pending minor revision application submitted September 26, 2024 (Title V Project No. 37195). The information previously submitted in TCEQ Form OP-UA15 has not changed. Therefore, TCEQ Form OP-UA15 is not included in this renewal application.

LP is proposing Compliance Assurance Monitoring changes for Title V Unit IDs PRESS and RCOPRESS to align the current deviation limits with manufacturer recommendations and wording in NSR Permit No. 26002; therefore, TCEQ Form OP-MON is included in this renewal application.

For the units impacted by a rule promulgation and the modification of TCEQ unit attribute forms, affected forms are included in this application. Additionally, the revisions to the permit are summarized in TCEQ Form OP-2 and the affected units are summarized in TCEQ Form OP-SUMR. A manual build of citations is requested for MACT Subpart DDDD in TCEQ Form OP-REQ3, which is an existing applicable requirement with new citations resulting from rule promulgations since the previous SOP renewal.

An updated Major NSR Summary Table was provided in the pending minor revision application submitted September 26, 2024 (Title V Project No. 37195). No additional updates aside from those provided in the pending minor revision application are required at this time, and the Major NSR Summary Table is not being included with this application.

The enclosed SOP renewal application for LP consists of the following forms along with supplemental information.

- ▶ Section 2. Process Description
- ▶ Section 3. Process Flow Diagram

- ▶ Section 4. TCEQ Form OP-1
- ▶ Section 5. TCEQ Form OP-2

Units at the Carthage OSB Mill that are specifically identified as off-permit sources in TCEQ guidance documents and forms are not specifically addressed in the SOP application. In addition to off-permit sources, units identified as having no unit-specific applicable state or federal requirements are not addressed in the SOP application. The sources not addressed in the application may still be subject to applicable site-wide requirements; however, these requirements are not codified on a unit-specific basis.

2. PROCESS DESCRIPTION

This section of the application presents an overview of the OSB manufacturing process at the Carthage OSB Mill.

2.1 Process Overview

Tree length logs are delivered to the plant site by truck and stored either in the crane pad or the wet deck until needed. Logs are fed by crane into one of three debarkers where the bark is removed. Bark is mechanically conveyed into a bin, and combusted on-site in the bark burner. Logs are reduced by three waferizers into thin wafers. After installation of the green screening system, the green wafers will then be screened, with the fines directed to the wet fuel system. The properly sized green wafers are mechanically conveyed to four green wafer bins.

Wafers are fed from the green bins into four rotary dryers where they are dried to the desired moisture content. Wafers exiting each dryer are collected by cyclone and deposited in a rotary screener to separate larger wafers from fines. The larger wafers are mechanically conveyed to three dry wafer bins, and the fines are pneumatically conveyed to the fines reclaim and raw fuel bin system. Exhaust from the cyclones is ducted to four WESPs and then to five RTO before being discharged to atmosphere.

Wafers are deposited from the dry bins into three blenders where they are coated with resins and wax. Coated wafers are mechanically conveyed into small forming bins from which they are deposited onto the mat forming line. The continuously formed mat is separated into approximately 24-foot sections by the flying cutoff saws. Mats are loaded into the press and pressed under heat to set the resin and form the board. The press is enclosed and exhaust from pressing is ducted to the press RTO/ RCO.

Pressed panels are conveyed to the sawline where the rough edges are trimmed off and the large panels cut into smaller marketable panels. Trimmed material and sawdust is collected and pneumatically conveyed to the sawline baghouse. Material collected by this baghouse is then pneumatically conveyed to the raw fuel bin. A portion of the sawtrim is reintroduced into the blending system.

Cut panels are stacked into units. Most proceed through the paint booth where edges are coated with water-based paint and a logo is painted on. These units are then banded and forklift conveyed to the warehouse ready for shipment. Some units, however, are either converted to tongue-and-groove panels on the sawline or are conveyed to the older sander and tongue-and-groove line where they may be sanded and or the edges profiled. Sander dust and material from the profiler is pneumatically conveyed to two sander baghouses. Material collected by these baghouses is pneumatically conveyed to the sander dust receiving bin. Some units are forklift conveyed to the Tech Shield line where a layer of aluminum foil is glued to one surface.

Material collected in the raw fuel and sander dust receiving bins is deposited into a hammermill where it is milled to consistent size and then pneumatically conveyed to the TOH fuel bin. Excess fine material may also be mechanically conveyed into the fines truck bin, drop loaded into trucks and shipped off site. Material in the finish fuel bin is fed to the hammermill, milled to a finer consistency and pneumatically conveyed to the TOH fuel bin. The TOH supplies hot oil used to heat the press. The primary TOH is wood and natural gas fired. When firing wood, exhaust from the primary TOH is routed through the dryers. The back-up TOH is natural gas fired. When firing natural gas, both the primary and back-up TOH exhaust is emitted directly to the atmosphere through a single, dedicated stack.
