Dear Senator Kolkhurst:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) renewal application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-97.134722,28.895&level=13>.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

The Honorable Lois Kolkhorst

Introduction and Background Information

South Texas Electric Cooperative, Inc. (STEC) respectfully submits this application for a renewal of the existing Title V permit O-799 covering the Sam Rayburn Power Plant. The site was initially awarded a site operating permit (SOP) in September of 1999. Since that time, STEC has also applied for a Significant Revision in 2002 in conjunction with the addition of several major sources at the site, a minor amendment in 2016, and renewals in 2004, 2009, 2014, and 2020.

This renewal application includes minor revisions to remove units that are no longer in service, update the names of two storage tanks, and remove NESHAP requirements that no longer apply. Additional details are provided in the Process Description section. Below is a brief background of the company and facility, followed by a list of required forms and submittals.

Company Background

South Texas Electric Cooperative, a generation and transmission electric cooperative, is a Texas Corporation organized for the purpose of furnishing dependable, economical, wholesale electricity to primarily rural areas of Texas. The eight electric distribution systems that comprise the STEC system are set up to provide distribution electric services to cooperative members over a 42 county area in South Texas.

Plant History

STEC owns and operates the Sam Rayburn Power Plant. The plant, which first entered service in 1963, is located on the Guadalupe River near the town of Nursery. Due to the emissions from the electric generating equipment at the site, the plant is classified as a major site with respect to four of the “criteria pollutants” regulated by state and federal law.

An expansion that began in 2002 and completed in 2003 triggered a PSD review and a major amendment to the existing Title V permit. There are now 6 primary generating units including the following:

- 2 – 1.6MW Mobile Diesel Generators
- 3 – 49MW Dual Fuel Combustion Turbines
- 1 – 39MW Steam Turbine connected to 3 unfired HRSG’s

Site Description

The Sam Rayburn Power Plant is located on the banks of the Guadalupe River, 4.7 miles west of Nursery, Texas on FM 447. Victoria, the nearest major town, is approximately 10 miles to the southeast with a population of approximately 65,000. The predominant land use in the area is agricultural. The nearest household is one half mile from the power plant. The plant location is shown on an excerpt from a USGS 7.5-minute quadrangle map following this description.

STEC SAMRAYBURN POWER PLANT

Process Description

The Sam Rayburn Power Plant previously included two 11.25 MW dual-fuel combustion turbines, which have since been retired and demolished. The facility currently consists of three 49 MW dual-fuel combustion turbines operating in combined cycle with a 39 MW steam turbine. The heat recovery steam generators for the combined cycle installation are unfired, and the turbines are not equipped with bypass stacks. The plant also includes various support equipment, such as three small emergency diesel generators, a cooling tower, and several VOC storage tanks.

The two 11.25MW combustion turbines were installed in 1963 and had the ability to operate on natural gas or diesel fuel. STEC elected to maintain their grandfathered/exempt status in late 1999. The 25 MW steam turbine was previously removed from the Title V permit but was originally powered by a 260 MMBtu/hr tangentially fired boiler capable of operating on natural gas or diesel fuel. The boiler and turbine were originally installed in 1965.

The three 49MW combustion turbines were added in 2003 to be operated in combined cycle with a 39MW steam unit. These units were added under PSD authorization PSD-TX-1011 and TCEQ permit number 48070.

Standby power is developed by two 1.6MW diesel generators. These generators are currently permitted under TCEQ standard exemption #6 dated 09/12/1989. A 500kW backup generator provides standby auxiliary service to plant offices and control equipment in case of emergency. This unit is covered by standard exemption #6 dated 10/4/1995. Two other emergency diesel generators are located on-site, one to provide backup power to fire protection pumps, and one that provides emergency backup to critical auxiliaries. These two units are covered by 30 TAC 106.511 with an effective date of 9/4/2000.

Various plant auxiliaries and support systems are covered under the current Title V permit. These systems include a cooling tower added under the PSD authorization quoted above, and several tanks. The tanks currently maintain exempt or grandfathered status due to size, installation date, contents, or a combination of these.

However the two 11.25 MW dual fuel combustion turbines were retired and demolished last month, along with one large fuel oil tank (FIN OIL2). We request that they be removed from the permit. Additionally, an auxiliary boiler that was authorized by 30 TAC 106.183 has been retired and is no longer in service. We also request the removal of that unit, along with a diesel storage tank (DSL3) which has also been retired and is no longer in service.

For clarification purposes, we also request that diesel storage tanks DSL4 and DSL5 be relabeled as DSL6 and DSL13 in the permit, respectively, to reflect their current association with emergency diesel generators G6 and G13. Please note that no physical changes have been made to the tanks themselves.

We also request that Special Terms and Condition 7, pertaining to 40 CFR Part 61, Subpart M (Asbestos NESHAP) be removed. The site no longer contains any regulated asbestos-containing materials, nor are there any ongoing or planned activities that would subject the facility to this standard. We therefore consider this requirement no longer applicable.
