

Unit Attribute (UA) Form Table Instructions
Federal Operating Permit Program
Texas Commission on Environmental Quality

Overview:

The UA Form includes General Information, a Table of Contents, OP-SUM, OP-REQ2, and the unit attribute tables for the emission units which start on Page 1. The corresponding instructions for the unit attribute tables are found in the UA Form Instructions link in the Website Links section. A dropdown menu is used in all of the unit attribute tables. The dropdown menu corresponds to the codes that are available in the form instructions. These forms have conditional formatting and data validation which use a dropdown menu. Therefore, if typing or pasting codes that are not in the dropdown menu, an error will occur.

This sheet is for informational purposes only. No data is required and you do not need to print this sheet. Please begin by inserting the permit information in the General Information sheet. Complete the UA Form in order of the sheets until you reach Page 1, then complete the unit attribute tables as applicable. Responses and data entered on the OP-SUM Table 1 are used to prefill columns in the remaining sheets of the UA form.

The recommended zoom setting is 100%. Adjusting the zoom may affect the visibility of instructions.

When pasting, always use Excel's "Paste as Values" option from the right-clicking menu. "Paste as Values" can be used when data repeats on multiple forms.

Fully expand the row by increasing the row heights so all text is visible. (Place the cursor on the bottom of the number line to the far left of the screen, click and drag downward until all text is visible.)

Accessibility disclaimer: this form contains intentionally blank cells.

Under Texas Government Code 559.003(a), individuals are entitled to receive and review any information collected by TCEQ about the individual by means of a form that that is completed and filed with TCEQ in a paper or electronic format on the TCEQ website consistent with Texas Government Code sec., 559.003(b). The individual is also entitled to have TCEQ correct information about the individual that is incorrect.

If you have questions on how to fill out this form or about the Air Permits Division, please contact us at 512-239-1250.

Instructions:

[General Information](#)

The General Information sheet holds the permit information. Applicants will enter the following permit application information for the site:

"Date", "Customer Reference No.", "Regulated Entity No.", "Permit No.", "Permit Area Name", and "Project Number" if available. The applicants will use the dropdown menu for "Permit Type", "Project Type", and "Submission Type". The "Title V Form Release Date", "Form Number", "APD ID Number", and "Version Revised Date" are present and cannot be altered.

Any subsequent submittals must have a new date.

[Table of Contents](#)

Unit Attribute (UA) Form Table Instructions
Federal Operating Permit Program
Texas Commission on Environmental Quality

The Table of Contents lists all of the sheets in the UA Form Table. If information is submitted on the OP-SUM, OP-REQ2 or the Unit Attribute pages, the “Data Submitted” column will display a “Yes”. If no information is submitted, the “Data Submitted” column will remain blank. The Table of Contents information is autopopulated. Applicants will not need to submit any information in the Table of Contents.

On the Table of Contents sheet, there are filter dropdowns in row 3 that are optional tools to simplify data shown on the sheet.

To use the Table of Contents filter(s):

- Locate row 3 on the Table of Contents sheet.
 - Left click the arrow icon in whichever column you would like to filter. A box will appear with checkboxes of all data within the table column.
 - Select the applicable checkbox(s), or search for specific data by using the search bar, and then select the “OK” button.
 - The table will filter out data that has not been selected.
 - Should the project require different filter settings during the process, return to the filter(s) and update the checkboxes accordingly.
- To return to the original state of the sheet, select the “(Select All)” checkbox for all table column filters.

[OP-SUM Table 1](#)
and [OP-SUM Table 2](#)

The data found in the Unit ID No. and Group ID No. columns are used to prefill the dropdown menus for the Unit ID No. found in the OP-REQ2 and the unit attribute tables. Use the dropdown menus in the OP-SUM to select data. If there is no dropdown menu, enter the data. Refer to the OP-SUM form instructions for further details to fill out the table.

[OP-REQ2](#)

The OP-REQ2 contains dropdown menus for Unit AI and Unit ID No. The data in the dropdown menus come from the data submitted in the OP-SUM Table 1. If a Unit ID No. is a member of a group, only the Group ID No. will be available in the dropdown menu. If a permit shield is being requested for a Unit ID No., the ID No. must be entered on the OP-SUM Table 1. Refer to the OP-REQ2 form instructions for further details to fill out the table.

The Potentially Applicable Regulatory Name column has conditional formatting in place if a regulatory name is typed in or pasted rather than selected from the dropdown menu. This does not automatically indicate an error.

Unit Attribute Tables begin with [Page 1](#):

The pages contain the unit attribute tables. The Unit ID No. dropdown menu is populated with the Unit ID No. entered in the OP-SUM Table 1. If a Unit ID No. is a member of a group, only the Group ID No. will be available in the dropdown menu. The SOP/GOP Index No. is not a dropdown menu. The SOP/GOP Index No. cannot be left blank and must be entered by the applicant. The dropdown menu for the other columns in the table corresponds to the codes that are available for each question found in the UA Form Instructions. Refer to the specific OP-UA form instructions for further details to fill out the table.

If existing information on a unit attribute table for an operating scenario needs to be changed, updated, or deleted (including index numbers) provide a description of the change in the “Description of Change and Provisional Terms and Conditions” section of Form OP-2. The OP-2 description should clearly identify whether existing UA data is being updated.

For application updates within a specific project the entire UA form must be resubmitted with the changed, new or clarified information included.

Title V Site Operating Permit O3829 Renewal Application

Dear Mr. Chacon:

Palo Duro Pipelines (Texas Gathering) L.P. (Palo Duro), previously known as Midcoast Pipelines (Texas Gathering) L.P., has authorized me to submit this Federal Title V Site Operating Permit Number O3829 (SOP 3829) Renewal Application, under Title V of the Federal Clean Air Act Amendments of 1990 (FCAA) and Title 30 Texas Administrative Code (30 TAC) Chapter 122, to the TCEQ for the Allison Gas Plant (AGP). The AGP is primarily a natural gas liquids (NGL), stabilized condensate, and sales gas production facility that is located approximately 2.5 miles west-northwest of the town of Allison in Wheeler County, Texas. The AGP currently operates under SOP 3829, which was last renewed by the TCEQ on May 26, 2021. Per the associated TCEQ SOP 3829 renewal notice letter, SOP 3829 expires on May 26, 2026 and a complete renewal application received before November 26, 2025 will be considered timely. Accordingly, this SOP 3829 complete renewal application is being submitted to the TCEQ before November 26, 2025. We look forward to working with you and/or the Title V SOP reviewer in your review and subsequent renewal of SOP 3829. Please call Marissa Stambaugh of Palo Duro at (806) 663-7723, or me at (512) 663-0807, or e-mail us at MStambaugh@producersmidstream.com or DavidCrowther88@outlook.com, if you have any questions or need additional information.

Sincerely,

David Crowther

INTRODUCTION

Palo Duro Pipelines (Texas Gathering) L.P. (Palo Duro), previously known as Midcoast Pipelines (Texas Gathering) L.P., is submitting this Federal Title V Site Operating Permit Number O3829 (SOP 3829) Renewal Application, under Title V of the Federal Clean Air Act Amendments of 1990 (FCAA) and Title 30 Texas Administrative Code (30 TAC) Chapter 122, to the Texas Commission on Environmental Quality (TCEQ) for the Allison Gas Plant (AGP). The AGP is primarily a natural gas liquids (NGL), stabilized condensate, and sales gas production facility that is located approximately 2.5 miles west-northwest of the town of Allison in Wheeler County, Texas.

The AGP currently operates under SOP 3829, which was last renewed by the TCEQ on May 26, 2021. Per the associated TCEQ SOP 3829 renewal notice letter, SOP 3829 expires on May 26, 2026 and a complete renewal application received before November 26, 2025 will be considered timely. Accordingly, this SOP 3829 complete renewal application is being submitted to the TCEQ before November 26, 2025.

The AGP normal emission sources are authorized under Standard Permit Registration Number 95105 (SP 95105), automatically authorized by the TCEQ on May 12, 2020. A small gasoline dispensing facility is authorized under Permit-by-Rule (PBR) §106.473 without requiring formal registration. Small diesel and other storage tanks, and associated unloading/loading facilities, with negligible volatile organic compound (VOC) emissions are authorized under PBR §106.472 without requiring formal registration. There are maintenance/startup/shutdown (MSS) activities and emissions authorized under PBR 30 TAC §106.263 without requiring formal registration.

APPLICABLE REGULATIONS SUMMARY

Since the potential emission of at least one criteria air pollutant is greater than 100 tons per year (TPY), each hazardous air pollutant (HAP) is less than 10 TPY, and combined HAPs are less than 25 TPY, the AGP is a major emissions source under Title V and a non-major (a.k.a. area) emissions source under Title III of the FCAA. Because the potential emission of each criteria air pollutant is less than 250 TPY and it is not one of the listed source types in the regulation, the AGP is a non-major (a.k.a. minor) emissions source under the Federal Prevention of Significant Deterioration (PSD) regulation. Being located in Wheeler County, the AGP cannot be a major Federal Nonattainment emissions source. The AGP is a non-major (a.k.a. minor) source of greenhouse gas (GHG) emissions.

Since each 4-stroke lean-burn (4SLB) 3,550 horsepower (HP) Caterpillar G3612TALE and the 4SLB 1,945 HP Cummins QSK60G reciprocating internal combustion engine (RICE) “commenced construction” after July 1, 2007, it is subject to the applicable requirements of Title 40 Code of Federal Regulations (40 CFR) Part 60 New Source Performance Standard Subpart JJJJ (NSPS JJJJ). Compliance with the applicable requirements of NSPS JJJJ satisfies the applicable requirements of 40 CFR Part 63 Maximum Achievable Control Technology Standard Subpart ZZZZ (MACT ZZZZ).

Per associated guidance from the Environmental Protection Agency (EPA):

1. Since the 4-stroke rich-burn (4SRB) 738 HP Waukesha F3521GSI RICE “commenced construction” after the MACT ZZZZ existing/new area source demarcation date of June 12, 2006 but yet was originally manufactured before the pertinent NSPS JJJJ applicability date of July 1, 2007, it is considered a “Gap Engine”;
2. Gap Engines would be subject to 40 CFR §60.4230(a)(6), but review of §60.4230(a)(6)-referenced §60.4236, §60.4236(b)-referenced §60.4233, and §60.4233(e)-referenced Table 1 verifies that there are no applicable NSPS JJJJ requirements for Gap Engines; and
3. Therefore, the resulting applicable regulation for Gap Engines is 40 CFR §63.6590(c).

Because the AGP was constructed after January 20, 1984 and before August 23, 2011, certain cryogenic plant fugitive emission components are subject to the applicable requirements of NSPS KKK.

Since each of the reciprocating gas compressors, pneumatic controllers, storage vessels, and natural gas processing plant were originally manufactured before August 23, 2011, they are not subject to the requirements NSPS OOOO, nor to subsequent NSPS OOOOa & OOOOb. There are no NSPS OOOO-defined gas well, centrifugal gas compressor, or sweetening unit affected facilities at the AGP.

The flare (Unit ID No. FLR-1) is an emergency/upset flare and is therefore exempt from the process flare compliance monitoring requirements of 30 TAC §111.111(a)(4)(i) & (ii).

Although the 4SRB 738 HP Waukesha F3521GSI RICE operates with a catalytic converter to control the oxides of nitrogen (NO_x) to no more than the 2 grams per horsepower-hour (gr/HP-hr) allowed by SP 95105, where 30 TAC §116 Subchapter F is an “Applicable requirement” per 30 TAC Chapter 122, since it can’t operate more than 4,380 hours per year (hrs/yr) as federally-enforced by SP 95101, the potential uncontrolled NO_x emission is less than 100 TPY. Accordingly, the Waukesha F3521GSI RICE is not subject to the Compliance Assurance Monitoring (CAM) requirements of 30 TAC §122.604.

PROCESS DESCRIPTION

The AGP is primarily an NGL, stabilized condensate, and sales gas production facility that includes gas compression, molecular sieve gas dehydration, cryogenic NGL recovery, NGL treating, and truck loading/unloading facilities.

Figure 1-1 is a simple process flow diagram (PFD) for the AGP.

The inlet gas stream enters the plant through pipeline and flows through gas and liquids separation equipment, which separates raw condensate and produced water from the gas. The separated pressurized raw condensate flows either directly offsite, or first through a condensate stabilization unit before it flows offsite, through pipeline. Separated vapors from the condensate stabilization unit route to a process line. There are no atmospheric condensate storage tanks at the AGP. The separated produced water, along with atmospheric drain slop water, flows into the atmospheric slop oil and/or produced/slop water tanks, from where it is periodically loaded into and removed from the site by atmospheric transport trucks.

The separated gas stream from the gas/liquids separation equipment flows through the molecular sieve gas dehydration unit desiccant beds, which remove almost all of the water from the gas before it flows into the cryogenic NGL recovery unit. There are at least two parallel molecular sieve desiccant beds, one bed in gas dehydration service while the other bed is being regenerated by hot, dry natural gas that has been indirectly heated by the heat-medium heater, to remove the adsorbed water from the desiccant. The desiccant beds are periodically switched so that the other desiccant bed can be regenerated.

The dehydrated gas from the molecular sieve desiccant beds flows through the cryogenic NGL recovery unit, which significantly lowers the temperature and pressure of the gas, as well as removes energy from the gas, enabling lighter (primarily ethane and propane) NGL to be separated from the gas. The separated NGL, and possibly NGL from another Palo Duro plant, flows through the amine treating unit, which removes primarily carbon dioxide (CO₂) from the NGL before it exits the site through pipeline. The removed CO₂ and other gaseous components (normally called “Acid Gas”) from the NGL ends up venting to the atmosphere from the NGL amine treating unit vent.

The residue gas stream from the cryogenic NGL recovery unit is compressed by gas-fired RICE-driven gas compressors before flowing offsite through a sales gas pipeline.

Part of the residue gas stream is used as fuel gas for the RICE, hot oil heaters, and flare, as well as molecular sieve regeneration gas.

New and/or spent (used) lube oil, antifreeze (mixture of ethylene glycol (EG) and water), methyldiethanolamine (MDEA), gasoline, diesel, methanol, and other atmospheric storage tanks with very small or negligible VOC emissions can also exist at the site.
