1.0 Executive Summary

IACX Rock Creek LLC (IACX) owns and operates the Sneed Booster Station located in Dumas, Texas. IACX operates under Texas Commission on Environmental Quality (TCEQ) Customer Reference Number (CN) 605745843 and TCEQ Air Quality Account Number MR0029L. Sneed Booster Station has been assigned Regulated Entity Number (RN) 100220052. The site is authorized by Permit by Rule (PBR) No. 38617, New Source Review (NSR) Permit No. 73350 and 83193, Prevention of Significant Deterioration (PSD) Permit No. PSDTX1104, and various non-registerable PBRs.

Moore County is currently an attainment or unclassified area for all criteria pollutants. The Sneed Booster Station is an existing major source with respect to PSD. The Nonattainment New Source Review (NNSR) program is not applicable to the Sneed Booster Station. The Sneed Booster Station operates under the federal operating permit program (Title V) due to potential emissions of volatile organic compounds (VOC), oxides of nitrogen (NO_x), sulfur dioxide (SO₂), and carbon monoxide (CO). The Sneed Booster Station currently operates under Site Operating Permit (SOP) / Title V Permit No. O2568. Title V Permit No. O2568 is scheduled to expire on November 10, 2026.

With this application, IACX requests a minor modification to Title V Permit No. O2568 to update NSR Permit No. 83193 issuance date.

1.1 Application Contents

IACX submitted a modification to TCEQ for NSR Permit No. 83193 (issued December 16, 2024) for the Sneed Booster Station. The modification resulted in an update to the Maximum Allowable Emission Rates Table (MAERT). IACX is requesting to incorporate this most recent issuance of NSR Permit No. 83193 into Title V Permit No. O2568.

There are no changes to emission units or regulatory requirements, therefore, only TCEQ Forms OP-2 and OP-REQ1 are being included to document the NSR issuance update. Appendix A and B include the most recent NSR Permit No. 83193 issuance, and the most recent Title V Permit No. O2568.

Permit: 83193 and PSDTX1104

Amendment Date: December 16, 2024

Expiration Date: July 13, 2028

For the Commission

1. **Facilities** covered by this permit shall be constructed and operated as specified in the application for the permit. All representations regarding construction plans and operation procedures contained in the permit application shall be conditions upon which the permit is issued. Variations from these representations shall be unlawful unless the permit holder first makes application to the Texas Commission on Environmental Quality (commission) Executive Director to amend this permit in that regard and such amendment is approved. [Title 30 Texas Administrative Code (TAC) Section 116.116 (30 TAC § 116.116)]¹
2. **Voiding of Permit.** A permit or permit amendment is automatically void if the holder fails to begin construction within 18 months of the date of issuance, discontinues construction for more than 18 months prior to completion, or fails to complete construction within a reasonable time. Upon request, the executive director may grant an 18-month extension. Before the extension is granted the permit may be subject to revision based on best available control technology, lowest achievable emission rate, and netting or offsets as applicable. One additional extension of up to 18 months may be granted if the permit holder demonstrates that emissions from the facility will comply with all rules and regulations of the commission, the intent of the Texas Clean Air Act (TCAA), including protection of the public's health and physical property; and (b)(1) the permit holder is a party to litigation not of the permit holder's initiation regarding the issuance of the permit; or (b)(2) the permit holder has spent, or committed to spend, at least 10 percent of the estimated total cost of the project up to a maximum of \$5 million. A permit holder granted an extension under subsection (b)(1) of this section may receive one subsequent extension if the permit holder meets the conditions of subsection (b)(2) of this section. [30 TAC § 116.120]
3. **Construction Progress.** Start of construction, construction interruptions exceeding 45 days, and completion of construction shall be reported to the appropriate regional office of the commission not later than 15 working days after occurrence of the event. [30 TAC § 116.115(b)(2)(A)]
4. **Start-up Notification.** The appropriate air program regional office shall be notified prior to the commencement of operations of the facilities authorized by the permit in such a manner that a representative of the commission may be present. The permit holder shall provide a separate notification for the commencement of operations for each unit of phased construction, which may involve a series of units commencing operations at different times. Prior to operation of the facilities authorized by the permit, the permit holder shall identify the source or sources of allowances to be utilized for compliance with Chapter 101, Subchapter H, Division 3 of this title (relating to Mass Emissions Cap and Trade Program). [30 TAC § 116.115(b)(2)(B)]
5. **Sampling Requirements.** If sampling is required, the permit holder shall contact the commission's Office of Compliance and Enforcement prior to sampling to obtain the proper data forms and procedures. All sampling and testing procedures must be approved by the executive director and coordinated with the regional representatives of the commission. The permit holder is also responsible for providing sampling facilities and conducting the sampling operations or contracting with an independent sampling consultant. [30 TAC § 116.115(b)(2)(C)]
6. **Equivalency of Methods.** The permit holder must demonstrate or otherwise justify the equivalency of emission control methods, sampling or other emission testing methods, and monitoring methods proposed as alternatives to methods indicated in the conditions of the permit. Alternative methods shall be applied for in writing and must be reviewed and approved by the executive director prior to their use in fulfilling any requirements of the permit. [30 TAC § 116.115(b)(2)(D)]
7. **Recordkeeping.** The permit holder shall maintain a copy of the permit along with records containing the information and data sufficient to demonstrate compliance with the permit, including production records and

operating hours; keep all required records in a file at the plant site. If, however, the facility normally operates unattended, records shall be maintained at the nearest staffed location within Texas specified in the application; make the records available at the request of personnel from the commission or any air pollution control program having jurisdiction in a timely manner; comply with any additional recordkeeping requirements specified in special conditions in the permit; and retain information in the file for at least two years following the date that the information or data is obtained. [30 TAC § 116.115(b)(2)(E)]

8. **Maximum Allowable Emission Rates.** The total emissions of air contaminants from any of the sources of emissions must not exceed the values stated on the table attached to the permit entitled "Emission Sources-- Maximum Allowable Emission Rates." [30 TAC § 116.115(b)(2)(F)]¹
9. **Maintenance of Emission Control.** The permitted facilities shall not be operated unless all air pollution emission capture and abatement equipment is maintained in good working order and operating properly during normal facility operations. The permit holder shall provide notification in accordance with 30 TAC §101.201, 101.211, and 101.221 of this title (relating to Emissions Event Reporting and Recordkeeping Requirements; Scheduled Maintenance, Startup, and Shutdown Reporting and Recordkeeping Requirements; and Operational Requirements). [30 TAC§ 116.115(b)(2)(G)]
10. **Compliance with Rules.** Acceptance of a permit by an applicant constitutes an acknowledgment and agreement that the permit holder will comply with all rules and orders of the commission issued in conformity with the TCAA and the conditions precedent to the granting of the permit. If more than one state or federal rule or regulation or permit condition is applicable, the most stringent limit or condition shall govern and be the standard by which compliance shall be demonstrated. Acceptance includes consent to the entrance of commission employees and agents into the permitted premises at reasonable times to investigate conditions relating to the emission or concentration of air contaminants, including compliance with the permit. [30 TAC § 116.115(b)(2)(H)]
11. **This** permit may not be transferred, assigned, or conveyed by the holder except as provided by rule. [30 TAC § 116.110(e)]
12. **There** may be additional special conditions attached to a permit upon issuance or modification of the permit. Such conditions in a permit may be more restrictive than the requirements of Title 30 of the Texas Administrative Code. [30 TAC § 116.115(c)]
13. **Emissions** from this facility must not cause or contribute to "air pollution" as defined in Texas Health and Safety Code (THSC) §382.003(3) or violate THSC § 382.085. If the executive director determines that such a condition or violation occurs, the holder shall implement additional abatement measures as necessary to control or prevent the condition or violation.
14. **The** permit holder shall comply with all the requirements of this permit. Emissions that exceed the limits of this permit are not authorized and are violations of this permit.¹

¹ Please be advised that the requirements of this provision of the general conditions may not be applicable to greenhouse gas emissions.

Special Conditions

Permit Numbers 83193 and PSDTX1104

1. This permit authorizes emissions only from those points listed in the attached table entitled "Emission Sources - Maximum Allowable Emission Rates," and the facilities covered by this permit are authorized to emit subject to the emission rate limits on that table and other operating requirements specified in the special conditions. (PSD)
2. Non-fugitive emissions from relief valves, safety valves, or rupture discs of gases containing hydrogen sulfide (H₂S) at a concentration of greater than 0.1 percent are not authorized by this permit unless authorized on the maximum allowable emission rates table (MAERT). Any releases directly to atmosphere from relief valves, safety valves, or rupture discs of gases containing H₂S at a concentration greater than 0.1 weight percent are not consistent with good practice for minimizing emissions.

FEDERAL RULES APPLICABILITY

3. These facilities shall comply with all applicable requirements of the U.S. Environmental Protection Agency (EPA) regulations on Standards of Performance for New Stationary Sources promulgated in Title 40 Code of Federal Regulations Part 60 (40 CFR Part 60): **(12/24)**
 - A. Subpart A, General Provisions.
 - B. Subpart LLL, Standards of Performance for SO₂ Emissions From Onshore Natural Gas Processing for Which Construction, Reconstruction, or Modification Commenced After January 20, 1984, and on or Before August 23, 2011.

SULFUR RECOVERY UNIT

4. The total sulfur recovered from the Sulfur Recovery Unit (SRU) shall not exceed 30 long tons per day (LTPD). The minimum sulfur recovery efficiency for the SRU shall be 98.5 percent on a daily average when the sulfur production rate exceeds five LTPD. The minimum sulfur recovery efficiency for the SRU shall be 96.0 percent on a daily average when the sulfur production rate is less than or equal to five LTPD. The sulfur recovery efficiency shall be determined by calculation as follows: (PSD)

$$\text{Efficiency} = \frac{(\text{S recovered}) \times (100)}{[(\text{S recovered}) + (\text{S incinerator})]}$$

Where:

Efficiency = sulfur recovery efficiency, percent

S recovered = (elemental S in pit), lbs/day

S incinerator = sulfur in incinerator stack, lbs/day

The sulfur recovery efficiency shall be demonstrated for each calendar day (24-hour period) by a mass balance calculation using data obtained from the incinerator stack sulfur dioxide monitor and sulfur production records. Records and copies of the compliance calculations shall be maintained.

STEAM BOILER (BLR)

5. The steam boiler designated as Emission Point No. (EPN) BLR may be operated at up to a maximum fired duty of 4.25 MMBtu/hr with an annual average firing rate of 33,590 MMBtu/year in any rolling 12-month period. Monthly records shall be kept at the plant site on a rolling two-year basis. These records shall be updated by the fifteenth day of the following month to insure compliance with this representation. **(3/10)**

TAILGAS INCINERATOR (TGI)

6. Emissions from the sulfur pit shall be routed to the TGI. An enclosed vent collection system shall be installed at the liquid sulfur tank truck loading spot to collect hydrogen sulfide (H₂S) containing vent gas generated during liquid sulfur tank truck loading. The collected H₂S containing vent gas shall be directed to the TGI. The capture velocity at the enclosed vent collection system shall be a minimum of 150 feet per minute. (PSD) **(3/10)**
7. The TGI shall either operate with no less than 99.9 percent efficiency in disposing of the acid gas waste streams or operate with an exhaust H₂S concentration of less than five parts per million by volume (ppmv), corrected to 3 percent oxygen (O₂), on an hourly averaging period. Continuous compliance with this condition and the H₂S maximum allowable emission rate limit shall be demonstrated through compliance with the requirements in Special Conditions Nos. 9 and 11, or through the operation of a H₂S CEMS per Special Condition No. 15. (PSD)
8. There shall be no visible emissions from the TGI stack. (PSD)
9. Unless a H₂S CEMS is installed and operating per Special Condition No. 15, the TGI firebox exit temperature shall be continuously monitored and recorded. The temperature measurement device shall reduce the temperature readings to an averaging period of six minutes or less and record it at that frequency. The temperature monitor shall be installed, calibrated at least annually, and maintained according to the manufacturer's specifications. The device shall have an accuracy of ±2 percent of the temperature being measured. (PSD)

Quality-assured (or valid) data must be generated when the TGI is operating except during the performance of a daily zero and span check. Loss of valid data due to periods of monitor break down, out-of-control operation (producing inaccurate data), repair, maintenance, or calibration may be exempted provided it does not exceed 5 percent of the time (in minutes) that the TGI operated over the previous rolling 12-month period. The measurements missed shall be estimated using engineering judgment and the methods used recorded.

10. The following requirements apply to the acid gas collection systems used to route acid gas to the control devices designated as EPNs TGI and FLR1. **(12/24)**
 - A. Once a month conduct a visual, audible, and/or olfactory inspection of the acid gas collection system to verify there are no leaking components in the capture system.
 - B. The control devices (EPNs TGI and FLR1) shall not have a bypass.or
If there is a bypass for the control devices, comply with either of the following requirements:

- (1) Install a flow indicator that records and verifies zero flow at least once every 15 minutes immediately downstream of each valve that if opened would allow a vent stream to bypass the TGI or flare and be emitted, either directly or indirectly, to the atmosphere; or
- (2) Once a month, inspect the valves, verifying the position of the valves and the condition of the car seals prevent flow out the bypass.

A deviation shall be reported if the monitoring or inspections indicate bypass of the TGI or flare.

- C. Records of the inspections required shall be maintained and if the results of any of the above inspections are not satisfactory, the permit holder shall promptly take necessary corrective action.
 - D. All acid gas waste streams from this facility shall be routed to the TGI under normal operating conditions. In the event the TGI is down, emissions shall be routed to the flare (FIN FLR1-AOS, EPN FLR1) as an alternative to disposing acid gas waste streams. **The routing of waste streams from the SRU to the flare is limited to 6,000 hours per year.** In the event that both the SRU and TGI are down, emissions shall be routed to the flare (FIN FLR1-AOS, EPN FLR1). The routing of acid gas waste streams from the amine units to the flare is limited to 100 hours per year. EPN TGI and FIN FLR1-AOS shall not operate simultaneously. Any other exception to this condition requires prior approval by the TCEQ Executive Director or designated representative, and such exceptions may be subject to strict monitoring requirements. **(12/24)**
11. Unless a H₂S CEMS is installed and operating per Special Condition No. 15, the TGI firebox exit temperature shall be maintained at not less than 1450°F and exhaust O₂ concentration not less than 3 percent while waste gas is being fed into it prior to initial stack testing. After the initial stack test has been completed, the TGI shall be operated with not less than the O₂ concentration maintained during the last satisfactory stack test performed in accordance with Special Condition No. 14.

The firebox chamber six-minute average temperature shall be maintained above the hourly average temperature maintained during the last satisfactory stack test performed in accordance with Special Condition No. 14. (PSD) **(3/10)**

FLARE (FLR1)

12. The flare shall be designed and operated in accordance with the following requirements: (PSD)
- A. The flare system shall be designed such that the combined assist natural gas and waste stream to the flare meets the 40 CFR § 60.18 specifications of minimum heating value and maximum tip velocity at all times when emissions may be vented to them. **(12/24)**
The heating value and velocity requirements shall be satisfied during operations authorized by this permit. Flare testing per 40 CFR § 60.18(f) may be requested by the appropriate TCEQ Regional Office to demonstrate compliance with these requirements.
 - B. The flare shall be operated with a flame present at all times and/or have a constant pilot flame. The pilot flame shall be continuously monitored by a thermocouple or an infrared monitor. The time, date, and duration of any loss of pilot flame shall be recorded. Each

monitoring device shall be accurate to, and shall be calibrated at a frequency in accordance with, the manufacturer's specifications

- C. The flare shall be operated with no visible emissions except periods not to exceed a total of five minutes during any two consecutive hours.
- D. The permit holder shall install a continuous flow monitor and H₂S concentration analyzer that provide a record of the vent stream flow and H₂S concentration to the flare. The flow monitor sensor and analyzer sample points shall be installed in the vent stream such that the total planned MSS and AOS vent streams to the flare are measured and analyzed. Readings shall be taken at least once every 15 minutes and the average hourly values of the flow and composition shall be recorded each hour. **(12/24)**

The monitors shall be calibrated on an annual basis to meet the following accuracy specifications: the flow monitor shall be ± 5.0 percent, temperature monitor shall be ± 2.0 percent at absolute temperature, and pressure monitor shall be ± 5.0 mm Hg. The H₂S monitor shall meet the requirements of 40 CFR Part 60 Performance Specification 7. The monitors and analyzers shall operate as required by this section at least 95 percent of the time when the acid gas is directed to the flare, averaged over a rolling 12-month period.

Flared gas net heating value and actual exit velocity determined in accordance with 40 CFR § 60.18(f)(4) shall be recorded at least once every 15 minutes. Hourly mass emission rates shall be determined and recorded using the above readings and the emission factors used in the permit application. Flare emissions shall be calculated each month and the rolling 12-month flare emissions recorded

STACK SAMPLING

- 13. Sampling ports and platform(s) shall be incorporated into the design of the TGI (EPN TGI) according to the specifications set forth in the attachment entitled "Chapter 2, Stack Sampling Facilities" of the Texas Commission on Environmental Quality (TCEQ) Sampling Procedures Manual. Alternate sampling facility designs must be submitted for approval to the TCEQ Regional Director. **(12/24)** (PSD)
- 14. The permit holder shall perform stack sampling and other testing as required to establish the actual pattern and quantities of air contaminants being emitted into the atmosphere from the EPN TGI to demonstrate compliance with the MAERT and Special Condition No. 7. The permit holder is responsible for providing sampling and testing facilities and conducting the sampling and testing operations at his expense. Sampling shall be conducted in accordance with the appropriate procedures of the TCEQ Sampling Procedures Manual and the EPA Reference Methods. (PSD)

Requests to waive testing for any pollutant specified in this condition shall be submitted to the TCEQ Office of Air, Air Permits Division. Test waivers and alternate/equivalent procedure proposals for 40 CFR Part 60 testing which must have EPA approval shall be submitted to the TCEQ Regional Director. **(12/24)**

Sampling shall occur within 60 days after achieving the maximum operating rate, but no later than 180 days after initial start-up of the and at such other times as may be required by the TCEQ Executive Director. Requests for additional time to perform sampling shall be submitted to the appropriate TCEQ Regional Office.
- D. The facility being sampled shall operate at the maximum possible sulfur production rate during stack emission testing. These conditions/parameters and any other primary operating parameters that affect the emission rate shall be monitored and recorded during the stack test. Any additional parameters shall be determined at the pretest meeting and shall be stated in the sampling report. Permit conditions and parameter limits may be waived during stack testing performed under this condition if the proposed condition/parameter range is identified in the test notice specified in paragraph A and accepted by the TCEQ Regional Office. Permit allowable emissions and emission control requirements are not waived and still apply during stack testing periods.

If a H₂S CEMS is not used to demonstrate continuous compliance with Special Condition No. 7 during any subsequent operations, a stack test must be performed within 120 days if the weekly sulfur production rate is more than 10 percent greater than that recorded during the most recent test period. This sampling may be waived by the TCEQ Air Section Manager for the region.

- E. One copy of the final sampling report shall be forwarded to the appropriate TCEQ Regional Office within 60 days after sampling is completed. Sampling reports shall comply with the attached provisions entitled "Chapter 14, Contents of Sampling Reports" of the TCEQ Sampling Procedures Manual.

If a H₂S CEMS is installed to demonstrate continuous compliance with Special Condition No. 7, it must be installed, calibrated, and maintained in accordance with this condition. (PSD)
 - A. The CEMS shall meet the design and performance specifications, pass the field tests, and meet the installation requirements and the data analysis and reporting requirements specified

in the applicable Performance Specification Nos. 1 through 9, 40 CFR Part 60, Appendix B. If there are no applicable performance specifications in 40 CFR Part 60, Appendix B, contact the TCEQ Office of Permitting and Registration, Air Permits Division for requirements to be met.

- B. The permit holder shall assure that the CEMS meets the applicable quality-assurance requirements specified in 40 CFR Part 60, Appendix F, Procedure 1. Relative accuracy exceedances, as specified in 40 CFR Part 60, Appendix F, § 5.2.3 and any CEMS downtime shall be reported to the appropriate TCEQ Regional Manager, and necessary corrective action shall be taken. Supplemental stack concentration measurements may be required at the discretion of the appropriate TCEQ Regional Manager.
- C. The TGI exhaust stack flow rate shall be continuously monitored and recorded. The flow shall be recorded at least every 15 minutes and the hourly average flow rate shall be recorded. Each flow monitoring device shall be calibrated at a frequency in accordance with the manufacturer's specifications, or at least annually, whichever is more frequent, and shall be accurate to within 2 percent of span or 5 percent of the lesser of the design value or the flow measured during the most recent stack test.
- D. The monitoring data shall be reduced to hourly average concentrations at least once each day, using a minimum of four equally-spaced data points from each one-hour period. The individual average concentrations shall be reduced to units of pounds per hour at least once every week as follows:

The measured hourly average concentration from the CEMS shall be multiplied by the exhaust gas flow rate to determine the hourly emission rate. If a H₂S CEMS is installed to demonstrate continuous compliance with Special Condition No. 7, the hourly average CEMS readings shall be utilized to demonstrate continuous compliance with Special Condition No. 7 and the H₂S maximum allowable emission rate.
- E. All monitoring data and quality-assurance data shall be maintained by the source. The data from the CEMS may, at the discretion of the TCEQ, be used to determine compliance with the conditions of this permit.
- F. The appropriate TCEQ Regional Office shall be notified at least 30 days prior to any required RATA in order to provide them the opportunity to observe the testing.
- G. Quality-assured (or valid) data must be generated when the TGI is operating except during the performance of a daily zero and span check. Loss of valid data due to periods of monitor break down, out-of-control operation (producing inaccurate data), repair, maintenance, or calibration may be exempted provided it does not exceed 5 percent of the time (in minutes) that the TGI operated over the previous rolling 12-month period. The measurements missed shall be estimated using engineering judgment and the methods used recorded. Options to increase system reliability to an acceptable value, including a redundant CEMS, may be required by the TCEQ Regional Manager.

This permit authorizes the emissions from the TGI (EPN TGI), Facility Flare (EPN FLR1), Steam Boiler (EPN BLR), and SRU (EPN SRUFUGMSS) for the planned maintenance, start-up, and shutdown (MSS) of the SRU. Planned MSS activities that were not represented in the permit application are not authorized by this permit. The performance of each planned maintenance activity and the emissions associated with it shall be recorded and include at least the following information: (PSD)

- A. The physical location at which emissions from the planned MSS activity occurred, including the emission point number, common name, and any other identifier for the point at which the emissions were released into the atmosphere;
- B. The type of planned MSS activity and the reason for the planned activity;
- C. The date and time of the planned MSS activity and its duration;
- D. The estimated quantity of each air contaminant or mixture of air contaminants, emitted with the data and methods used to determine it. The emissions shall be estimated using the methods identified in the permit application, consistent with good engineering practice, as identified below.

FLR1: Measured flare stream flow rate, measured H₂S concentration, and estimated/measured acid gas VOC concentration to determine flow to flare and net heating value. Use 98 percent flare destruction efficiency and TCEQ flare factors for CO and NO_x.

BLR: Fuel flow rate and duration of firing for a maximum of 30 days in any rolling 12-month period at a maximum fired duty of 4.25 MMBtu per hour. **(3/10)**

TGI: Measured SO₂ emissions using CEMS

- 17. The SRU shall be depressurized, emptied and degassed in accordance with the following requirements. (PSD)
 - A. A sulfur purge (catalyst bed burnoff) shall be performed on the SRU prior to opening it to atmosphere. The sulfur dioxide concentration in the gas entering the TGI shall be confirmed to be less than 100 ppmv using a colorimetric gas detector tube and the value recorded prior to stopping the purge and venting the SRU to atmosphere. The sulfur dioxide CEMS and flow meter shall be used to determine the emissions during the sulfur purge.
 - B. The sulfur purge shall not be performed if acid gas is being flared at a flare stream sulfur load of greater than 3 LTPD.
- 18. If the SRU planned MSS will require a full SRU shutdown, the SRU shall continue to operate and process acid gas until the sulfur production drops to 3 LTPD on an hourly average, at which time flaring may commence and the SRU shutdown. Flaring may continue for no more than 24 hours during SRU shutdown. Acid gas flaring may occur during SRU start-up for a period not to exceed 24 hours. (PSD)

The permit holder shall comply with the permit's requirements, including compliance certification and deviation reporting, until notified by the TCEQ that this permit is voided.

The permit holder shall comply with 30 TAC Chapter 116 by obtaining a New Source Review authorization prior to new construction or modification of emission units located in the area covered by this permit.

All reports required by this permit must include in the submittal a cover letter which identifies the following information: company name, TCEQ regulated entity number, air account number (if assigned), site name, area name (if applicable), and Air Permits Division permit number(s).

Special Terms and Conditions:

Emission Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting

1. Permit holder shall comply with the following requirements:
 - A. Emission units (including groups and processes) in the Applicable Requirements Summary attachment shall meet the limitations, standards, equipment specifications, monitoring, recordkeeping, reporting, testing, and other requirements listed in the Applicable Requirements Summary attachment to assure compliance with the permit.
 - B. The textual description in the column titled "Textual Description" in the Applicable Requirements Summary attachment is not enforceable and is not deemed as a substitute for the actual regulatory language. The Textual Description is provided for information purposes only.
 - C. A citation listed on the Applicable Requirements Summary attachment, which has a notation [G] listed before it, shall include the referenced section and subsection for all commission rules, or paragraphs for all federal and state regulations and all subordinate paragraphs, subparagraphs and clauses, subclauses, and items contained within the referenced citation as applicable requirements.
 - D. When a grouped citation, notated with a [G] in the Applicable Requirements Summary, contains multiple compliance options, the permit holder must keep records of when each compliance option was used.

- E. Emission units subject to 40 CFR Part 63, Subpart ZZZZ as identified in the attached Applicable Requirements Summary table are subject to 30 TAC Chapter 113, Subchapter C, § 113.1090 which incorporates the 40 CFR Part 63 Subpart by reference.
2. The permit holder shall comply with the following sections of 30 TAC Chapter 101 (General Air Quality Rules):
- A. Title 30 TAC § 101.1 (relating to Definitions), insofar as the terms defined in this section are used to define the terms used in other applicable requirements
 - B. Title 30 TAC § 101.3 (relating to Circumvention)
 - C. Title 30 TAC § 101.8 (relating to Sampling), if such action has been requested by the TCEQ
 - D. Title 30 TAC § 101.9 (relating to Sampling Ports), if such action has been requested by the TCEQ
 - E. Title 30 TAC § 101.10 (relating to Emissions Inventory Requirements)
 - F. Title 30 TAC § 101.201 (relating to Emission Event Reporting and Recordkeeping Requirements)
 - G. Title 30 TAC § 101.211 (relating to Scheduled Maintenance, Start-up, and Shutdown Reporting and Recordkeeping Requirements)

 - J. Title 30 TAC § 101.223 (relating to Actions to Reduce Excessive Emissions)
3. Permit holder shall comply with the following requirements of 30 TAC Chapter 111:
- A. Visible emissions from stationary vents with a flow rate of less than 100,000 actual cubic feet per minute and constructed after January 31, 1972 that are not listed in the Applicable Requirements Summary attachment for 30 TAC Chapter 111, Subchapter A, Division 1, shall not exceed 20% opacity averaged over a six-minute period. The permit holder shall comply with the following requirements for stationary vents at the site subject to this standard:
 - (i) Title 30 TAC § 111.111(a)(1)(B) (relating to Requirements for Specified Sources)
 - (ii) Title 30 TAC § 111.111(a)(1)(E)
 - (iii) Title 30 TAC § 111.111(a)(1)(F)(i), (ii), (iii), or (iv)
 - (iv) For emission units with vent emissions subject to 30 TAC § 111.111(a)(1)(B), complying with 30 TAC § 111.111(a)(1)(F)(ii), (iii), or (iv), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146. These periodic monitoring requirements do not apply to vents that are not capable of producing visible emissions such as vents that emit only colorless VOCs; vents from non-fuming liquids; vents that provide passive

ventilation, such as plumbing vents; or vent emissions from any other source that does not obstruct the transmission of light. Vents, as specified in the "Applicable Requirements Summary" attachment, that are subject to the emission limitation of 30 TAC § 111.111(a)(1)(B) are not subject to the following periodic monitoring requirements:

- (1) An observation of stationary vents from emission units in operation shall be conducted at least once during each calendar quarter unless the emission unit is not operating for the entire quarter.
- (2) For stationary vents from a combustion source, if an alternative to the normally fired fuel is fired for a period greater than or equal to 24 consecutive hours, the permit holder shall conduct an observation of the stationary vent for each such period to determine if visible emissions are present. If such period is greater than 3 months, observations shall be conducted once during each quarter. Supplementing the normally fired fuel with natural gas or fuel gas to increase the net heating value to the minimum required value does not constitute creation of an alternative fuel.
- (3) Records of all observations shall be maintained.
- (4) Visible emissions observations of emission units operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of emission units operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions observations shall be made during times when the activities described in 30 TAC § 111.111(a)(1)(E) are not taking place. Visible emissions shall be determined with each stationary vent in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each stationary vent during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.
- (5) Compliance Certification:
 - (a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(1) and (a)(1)(B).
 - (b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(1)(F) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity

requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

- (c) Some vents may be subject to multiple visible emission or monitoring requirements. All credible data must be considered when certifying compliance with this requirement even if the observation or monitoring was performed to demonstrate compliance with a different requirement.

B. For visible emissions from a building, enclosed facility, or other structure; the permit holder shall comply with the following requirements:

- (i) Title 30 TAC § 111.111(a)(7)(A) (relating to Requirements for Specified Sources)
- (ii) Title 30 TAC § 111.111(a)(7)(B)(i) or (ii)
- (iii) For a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source subject to 30 TAC § 111.111(a)(7)(A), complying with 30 TAC § 111.111(a)(7)(B)(i) or (ii), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146:
 - (1) An observation of visible emissions from a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source which is required to comply with 30 TAC § 111.111(a)(7)(A) shall be conducted at least once during each calendar quarter unless the air emission source or enclosed facility is not operating for the entire quarter.
 - (2) Records of all observations shall be maintained.
 - (3) Visible emissions observations of air emission sources or enclosed facilities operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of air emission sources or enclosed facilities operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions shall be determined with each emissions outlet in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each emissions outlet during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to

condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

- (4) Compliance Certification:
- (a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(7) and (a)(7)(A).
 - (b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(7)(B) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

6. The permit holder shall comply with certified registrations submitted to the TCEQ for purposes of establishing federally enforceable emission limits. A copy of the certified registration shall be maintained with the permit. Records sufficient to demonstrate compliance with the established limits shall be maintained. The certified registration and records demonstrating compliance shall be provided, on request, to representatives of the appropriate TCEQ regional office and any local air pollution control agency having jurisdiction over the site. The permit holder shall submit updated certified registrations when changes at the site require establishment of new emission limits. If changes result in emissions that do not remain below major source thresholds, the permit holder shall submit a revision application to codify the appropriate requirements in the permit.

Additional Monitoring Requirements

The permit holder may elect to collect monitoring data on a more frequent basis and average the data, consistent with the averaging time or minimum frequency specified in the "Periodic Monitoring Summary," for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis. In no event shall data be collected and used in particular instances to avoid reporting deviations. Deviations shall be reported according to 30 TAC § 122.145 (Reporting Terms and Conditions).

A notation in the flare operation log should include the time of day and whether or not the flare had visible emissions. For flares operated less frequently than daily, the observation shall be made for each operation. The flare operator shall record at least 98% of these required observations. Note that to properly determine the presence of visible emissions, all sources must be in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 miles, away from the emission source during the observation. The observer shall select a position where the sun is not directly in the observer's eyes.</p> <p>If visible emissions are observed the permit holder shall either report a deviation or determine visible emissions consistent with Test Method 22 or Test Method 9.</p>

Permit: 83193 and PSDTX1104

Issuance Date: July 13, 2018

Expiration Date: July 13, 2028

For the Commission

1. **Facilities** covered by this permit shall be constructed and operated as specified in the application for the permit. All representations regarding construction plans and operation procedures contained in the permit application shall be conditions upon which the permit is issued. Variations from these representations shall be unlawful unless the permit holder first makes application to the Texas Commission on Environmental Quality (commission) Executive Director to amend this permit in that regard and such amendment is approved. [Title 30 Texas Administrative Code (TAC) Section 116.116 (30 TAC § 116.116)]¹
2. **Voiding of Permit.** A permit or permit amendment is automatically void if the holder fails to begin construction within 18 months of the date of issuance, discontinues construction for more than 18 months prior to completion, or fails to complete construction within a reasonable time. Upon request, the executive director may grant an 18-month extension. Before the extension is granted the permit may be subject to revision based on best available control technology, lowest achievable emission rate, and netting or offsets as applicable. One additional extension of up to 18 months may be granted if the permit holder demonstrates that emissions from the facility will comply with all rules and regulations of the commission, the intent of the Texas Clean Air Act (TCAA), including protection of the public's health and physical property; and (b)(1) the permit holder is a party to litigation not of the permit holder's initiation regarding the issuance of the permit; or (b)(2) the permit holder has spent, or committed to spend, at least 10 percent of the estimated total cost of the project up to a maximum of \$5 million. A permit holder granted an extension under subsection (b)(1) of this section may receive one subsequent extension if the permit holder meets the conditions of subsection (b)(2) of this section. [30 TAC § 116.120]
3. **Construction Progress.** Start of construction, construction interruptions exceeding 45 days, and completion of construction shall be reported to the appropriate regional office of the commission not later than 15 working days after occurrence of the event. [30 TAC § 116.115(b)(2)(A)]
4. **Start-up Notification.** The appropriate air program regional office shall be notified prior to the commencement of operations of the facilities authorized by the permit in such a manner that a representative of the commission may be present. The permit holder shall provide a separate notification for the commencement of operations for each unit of phased construction, which may involve a series of units commencing operations at different times. Prior to operation of the facilities authorized by the permit, the permit holder shall identify the source or sources of allowances to be utilized for compliance with Chapter 101, Subchapter H, Division 3 of this title (relating to Mass Emissions Cap and Trade Program). [30 TAC § 116.115(b)(2)(B)]
5. **Sampling Requirements.** If sampling is required, the permit holder shall contact the commission's Office of Compliance and Enforcement prior to sampling to obtain the proper data forms and procedures. All sampling and testing procedures must be approved by the executive director and coordinated with the regional representatives of the commission. The permit holder is also responsible for providing sampling facilities and conducting the sampling operations or contracting with an independent sampling consultant. [30 TAC § 116.115(b)(2)(C)]
6. **Equivalency of Methods.** The permit holder must demonstrate or otherwise justify the equivalency of emission control methods, sampling or other emission testing methods, and monitoring methods proposed as alternatives to methods indicated in the conditions of the permit. Alternative methods shall be applied for in writing and must be reviewed and approved by the executive director prior to their use in fulfilling any requirements of the permit. [30 TAC § 116.115(b)(2)(D)]
7. **Recordkeeping.** The permit holder shall maintain a copy of the permit along with records containing the information and data sufficient to demonstrate compliance with the permit, including production records and operating hours; keep all required records in a file at the plant site. If, however, the facility normally operates unattended, records

shall be maintained at the nearest staffed location within Texas specified in the application; make the records available at the request of personnel from the commission or any air pollution control program having jurisdiction in a timely manner; comply with any additional recordkeeping requirements specified in special conditions in the permit; and retain information in the file for at least two years following the date that the information or data is obtained. [30 TAC § 116.115(b)(2)(E)]

8. **Maximum Allowable Emission Rates.** The total emissions of air contaminants from any of the sources of emissions must not exceed the values stated on the table attached to the permit entitled "Emission Sources-- Maximum Allowable Emission Rates." [30 TAC § 116.115(b)(2)(F)]¹
9. **Maintenance of Emission Control.** The permitted facilities shall not be operated unless all air pollution emission capture and abatement equipment is maintained in good working order and operating properly during normal facility operations. The permit holder shall provide notification in accordance with 30 TAC §101.201, 101.211, and 101.221 of this title (relating to Emissions Event Reporting and Recordkeeping Requirements; Scheduled Maintenance, Startup, and Shutdown Reporting and Recordkeeping Requirements; and Operational Requirements). [30 TAC§ 116.115(b)(2)(G)]
10. **Compliance with Rules.** Acceptance of a permit by an applicant constitutes an acknowledgment and agreement that the permit holder will comply with all rules and orders of the commission issued in conformity with the TCAA and the conditions precedent to the granting of the permit. If more than one state or federal rule or regulation or permit condition is applicable, the most stringent limit or condition shall govern and be the standard by which compliance shall be demonstrated. Acceptance includes consent to the entrance of commission employees and agents into the permitted premises at reasonable times to investigate conditions relating to the emission or concentration of air contaminants, including compliance with the permit. [30 TAC § 116.115(b)(2)(H)]
11. **This** permit may not be transferred, assigned, or conveyed by the holder except as provided by rule. [30 TAC § 116.110(e)]
12. **There** may be additional special conditions attached to a permit upon issuance or modification of the permit. Such conditions in a permit may be more restrictive than the requirements of Title 30 of the Texas Administrative Code. [30 TAC § 116.115(c)]
13. **Emissions** from this facility must not cause or contribute to "air pollution" as defined in Texas Health and Safety Code (THSC) §382.003(3) or violate THSC § 382.085. If the executive director determines that such a condition or violation occurs, the holder shall implement additional abatement measures as necessary to control or prevent the condition or violation.
14. **The** permit holder shall comply with all the requirements of this permit. Emissions that exceed the limits of this permit are not authorized and are violations of this permit.¹

¹ Please be advised that the requirements of this provision of the general conditions may not be applicable to greenhouse gas emissions.

SPECIAL CONDITIONS

Permit Numbers 83193 and PSDTX1104

1. This permit authorizes emissions only from those points listed in the attached table entitled "Emission Sources - Maximum Allowable Emission Rates," and the facilities covered by this permit are authorized to emit subject to the emission rate limits on that table and other operating requirements specified in the special conditions. **(PSD)**
2. Non-fugitive emissions from relief valves, safety valves, or rupture discs of gases containing hydrogen sulfide (H₂S) at a concentration of greater than 0.1 percent are not authorized by this permit unless authorized on the maximum allowable emission rates table (MAERT). Any releases directly to atmosphere from relief valves, safety valves, or rupture discs of gases containing H₂S at a concentration greater than 0.1 weight percent are not consistent with good practice for minimizing emissions.

FEDERAL RULES APPLICABILITY

3. These facilities shall comply with the applicable requirements of the U.S. Environmental Protection Agency (EPA) regulations on Standards of Performance for New Stationary Sources promulgated for Onshore Natural Gas Processing: Sulfur Dioxide Emissions in Title 40 Code of Federal Regulations Part 60 (40 CFR Part 60), Subparts A and LLL. **(PSD)**

SULFUR RECOVERY UNIT

4. The total sulfur recovered from the Sulfur Recovery Unit (SRU) shall not exceed 30 long tons per day (LTPD). The minimum sulfur recovery efficiency for the SRU shall be 98.5 percent on a daily average when the sulfur production rate exceeds five LTPD. The minimum sulfur recovery efficiency for the SRU shall be 96.0 percent on a daily average when the sulfur production rate is less than or equal to five LTPD. The sulfur recovery efficiency shall be determined by calculation as follows: **(PSD)**

$$\text{Efficiency} = \frac{(\text{S recovered}) \times (100)}{[(\text{S recovered}) + (\text{S incinerator})]}$$

Where:

Efficiency = sulfur recovery efficiency, percent
S recovered = (elemental S in pit), lbs/day
S incinerator = sulfur in incinerator stack, lbs/day

SPECIAL CONDITIONS

Permit Numbers 83193 and PSDTX1104

Page 2

The sulfur recovery efficiency shall be demonstrated for each calendar day (24-hour period) by a mass balance calculation using data obtained from the incinerator stack sulfur dioxide monitor and sulfur production records. Records and copies of the compliance calculations shall be maintained.

STEAM BOILER (BLR)

5. The steam boiler designated as Emission Point No. (EPN) BLR may be operated at up to a maximum fired duty of 4.25 MMBtu/hr with an annual average firing rate of 33,590 MMBtu/year in any rolling 12-month period. Monthly records shall be kept at the plant site on a rolling two-year basis. These records shall be updated by the fifteenth day of the following month to insure compliance with this representation. **(3/10)**

TAILGAS INCINERATOR (TGI)

6. Emissions from the sulfur pit shall be routed to the TGI. An enclosed vent collection system shall be installed at the liquid sulfur tank truck loading spot to collect hydrogen sulfide (H₂S) containing vent gas generated during liquid sulfur tank truck loading. The collected H₂S containing vent gas shall be directed to the TGI. The capture velocity at the enclosed vent collection system shall be a minimum of 150 feet per minute. **(PSD) (3/10)**
7. The TGI shall either operate with no less than 99.9 percent efficiency in disposing of the acid gas waste streams or operate with an exhaust H₂S concentration of less than five parts per million by volume (ppmv), corrected to 3 percent oxygen (O₂), on an hourly averaging period. Continuous compliance with this condition and the H₂S maximum allowable emission rate limit shall be demonstrated through compliance with the requirements in Special Conditions Nos. 9 and 11, or through the operation of a H₂S CEMS per Special Condition No. 14. **(PSD)**
8. There shall be no visible emissions from the TGI stack. **(PSD)**
9. Unless a H₂S CEMS is installed and operating per Special Condition No. 14, the TGI firebox exit temperature shall be continuously monitored and recorded. The temperature measurement device shall reduce the temperature readings to an

SPECIAL CONDITIONS

Permit Numbers 83193 and PSDTX1104

averaging period of six minutes or less and record it at that frequency. The temperature monitor shall be installed, calibrated at least annually, and maintained according to the manufacturer's specifications. The device shall have an accuracy of ± 2 percent of the temperature being measured. **(PSD)**

Quality-assured (or valid) data must be generated when the TGI is operating except during the performance of a daily zero and span check. Loss of valid data due to periods of monitor break down, out-of-control operation (producing inaccurate data), repair, maintenance, or calibration may be exempted provided it does not exceed 5 percent of the time (in minutes) that the TGI operated over the previous rolling 12-month period. The measurements missed shall be estimated using engineering judgment and the methods used recorded.

10. The following requirements apply to the acid gas collection systems used to route acid gas to the TGI designated as EPN TGI. **(3/10)**
 - A. Once a month conduct a visual, audible, and/or olfactory inspection of the acid gas collection system to verify there are no leaking components in the capture system.
 - B. The TGI shall not have a bypass.

or

If there is a bypass for the TGI, comply with either of the following requirements:

- (1) Install a flow indicator that records and verifies zero flow at least once every 15 minutes immediately downstream of each valve that if opened would allow a vent stream to bypass the TGI and be emitted, either directly or indirectly, to the atmosphere; or
- (2) Once a month, inspect the valves, verifying the position of the valves and the condition of the car seals prevent flow out the bypass.

A deviation shall be reported if the monitoring or inspections indicate bypass of the TGI.

- C. Records of the inspections required shall be maintained and if the results of any of the above inspections are not satisfactory, the permit holder shall promptly take necessary corrective action.

SPECIAL CONDITIONS

Permit Numbers 83193 and PSDTX1104

Page 4

11. Unless a H₂S CEMS is installed and operating per Special Condition No. 14, the TGI firebox exit temperature shall be maintained at not less than 1450°F and exhaust O₂ concentration not less than 3 percent while waste gas is being fed into it prior to initial stack testing. After the initial stack test has been completed, the TGI shall be operated with not less than the O₂ concentration maintained during the last satisfactory stack test performed in accordance with Special Condition No. 13.
The firebox chamber six-minute average temperature shall be maintained above the hourly average temperature maintained during the last satisfactory stack test performed in accordance with Special Condition No. 13. **(PSD) (3/10)**

STACK SAMPLING

12. Sampling ports and platform(s) shall be incorporated into the design of the TGI (EPN TGI) according to the specifications set forth in the attachment entitled "Chapter 2, Stack Sampling Facilities" of the Texas Commission on Environmental Quality (TCEQ) Sampling Procedures Manual. Alternate sampling facility designs must be submitted for approval to the TCEQ Regional Manager or the TCEQ Office of Compliance and Enforcement (OCE), Compliance Support Division. **(PSD)**
13. The permit holder shall perform stack sampling and other testing as required to establish the actual pattern and quantities of air contaminants being emitted into the atmosphere from the EPN TGI to demonstrate compliance with the MAERT and Special Condition No. 7. The permit holder is responsible for providing sampling and testing facilities and conducting the sampling and testing operations at his expense. Sampling shall be conducted in accordance with the appropriate procedures of the TCEQ Sampling Procedures Manual and the EPA Reference Methods. **(PSD)**

Requests to waive testing for any pollutant specified in this condition shall be submitted to the TCEQ Office of Permitting and Registration, Air Permits Division. Test waivers and alternate/equivalent procedure proposals for 40 CFR Part 60 testing which must have EPA approval shall be submitted to the TCEQ OCE, Compliance Support Division.

- A. The appropriate TCEQ Regional Office shall be notified not less than 45 days prior to sampling. The notice shall include:
 - (1) Proposed date for pretest meeting.

- (2) Date sampling will occur.
- (3) Name of firm conducting sampling.
- (4) Type of sampling equipment to be used.
- (5) Method or procedure to be used in sampling.
- (6) Description of any proposed deviation from the sampling procedures specified in this permit or TCEQ/EPA sampling procedures.
- (7) Procedure/parameters to be monitored to determine worst case emissions during the sampling period.

The purpose of the pretest meeting is to review the necessary sampling and testing procedures, to provide the proper data forms for recording pertinent data, and to review the format procedures for the test reports. The TCEQ Regional Director or the TCEQ OCE, Compliance Support Division must approve any deviation from specified sampling procedures.

- B. Air contaminants emitted from EPN TGI to be tested for include (but are not limited to) H₂S, sulfur dioxide, carbon monoxide, and nitrogen oxides.
- C. Sampling shall occur within 60 days after achieving the maximum operating rate, but no later than 180 days after initial start-up of the and at such other times as may be required by the TCEQ Executive Director. Requests for additional time to perform sampling shall be submitted to the appropriate TCEQ Regional Office.
- D. The facility being sampled shall operate at the maximum possible sulfur production rate during stack emission testing. These conditions/parameters and any other primary operating parameters that affect the emission rate shall be monitored and recorded during the stack test. Any additional parameters shall be determined at the pretest meeting and shall be stated in the sampling report. Permit conditions and parameter limits may be waived during stack testing performed under this condition if the proposed condition/parameter range is identified in the test notice specified in paragraph A and accepted by the TCEQ Regional Office. Permit allowable emissions and emission control requirements are not waived and still apply during stack testing periods.

SPECIAL CONDITIONS

Permit Numbers 83193 and PSDTX1104

Page 6

If a H₂S CEMS is not used to demonstrate continuous compliance with Special Condition No. 7 during any subsequent operations, a stack test must be performed within 120 days if the weekly sulfur production rate is more than 10 percent greater than that recorded during the most recent test period. This sampling may be waived by the TCEQ Air Section Manager for the region.

- E. One copy of the final sampling report shall be forwarded to the appropriate TCEQ Regional Office within 60 days after sampling is completed. Sampling reports shall comply with the attached provisions entitled "Chapter 14, Contents of Sampling Reports" of the TCEQ Sampling Procedures Manual.

CONTINUOUS EMISSION MONITORING SYSTEM (CEMS)

14. The permit holder shall install, calibrate, and maintain a CEMS to measure and record the in-stack concentration of sulfur dioxide and O₂ from the TGI or EPN TGI. If a H₂S CEMS is installed to demonstrate continuous compliance with Special Condition No. 7, it must be installed, calibrated, and maintained in accordance with this condition. **(PSD)**

- A. The CEMS shall meet the design and performance specifications, pass the field tests, and meet the installation requirements and the data analysis and reporting requirements specified in the applicable Performance Specification Nos. 1 through 9, 40 CFR Part 60, Appendix B. If there are no applicable performance specifications in 40 CFR Part 60, Appendix B, contact the TCEQ Office of Permitting and Registration, Air Permits Division for requirements to be met.
- B. The permit holder shall assure that the CEMS meets the applicable quality-assurance requirements specified in 40 CFR Part 60, Appendix F, Procedure 1. Relative accuracy exceedances, as specified in 40 CFR Part 60, Appendix F, § 5.2.3 and any CEMS downtime shall be reported to the appropriate TCEQ Regional Manager, and necessary corrective action shall be taken. Supplemental stack concentration measurements may be required at the discretion of the appropriate TCEQ Regional Manager.
- C. The TGI exhaust stack flow rate shall be continuously monitored and recorded. The flow shall be recorded at least every 15 minutes and the hourly average flow rate shall be recorded. Each flow monitoring device shall be calibrated at a frequency in accordance with the manufacturer's specifications, or at least annually, whichever is more frequent, and shall be accurate to within 2 percent of span or 5 percent of the lesser of the design value or the flow measured during the most recent stack test.

SPECIAL CONDITIONS

Permit Numbers 83193 and PSDTX1104

Page 7

- D. The monitoring data shall be reduced to hourly average concentrations at least once each day, using a minimum of four equally-spaced data points from each one-hour period. The individual average concentrations shall be reduced to units of pounds per hour at least once every week as follows:

The measured hourly average concentration from the CEMS shall be multiplied by the exhaust gas flow rate to determine the hourly emission rate. If a H₂S CEMS is installed to demonstrate continuous compliance with Special Condition No. 7, the hourly average CEMS readings shall be utilized to demonstrate continuous compliance with Special Condition No. 7 and the H₂S maximum allowable emission rate.

- E. All monitoring data and quality-assurance data shall be maintained by the source. The data from the CEMS may, at the discretion of the TCEQ, be used to determine compliance with the conditions of this permit.
- F. The appropriate TCEQ Regional Office shall be notified at least 30 days prior to any required RATA in order to provide them the opportunity to observe the testing.
- G. Quality-assured (or valid) data must be generated when the TGI is operating except during the performance of a daily zero and span check. Loss of valid data due to periods of monitor break down, out-of-control operation (producing inaccurate data), repair, maintenance, or calibration may be exempted provided it does not exceed 5 percent of the time (in minutes) that the TGI operated over the previous rolling 12-month period. The measurements missed shall be estimated using engineering judgment and the methods used recorded. Options to increase system reliability to an acceptable value, including a redundant CEMS, may be required by the TCEQ Regional Manager.

PLANNED MAINTENANCE, START-UP, AND SHUTDOWN

15. This permit authorizes the emissions from the TGI (EPN TGI), Facility Flare (EPN FLR1), Steam Boiler (EPN BLR), and SRU (EPN SRUFUGMSS) for the planned maintenance, start-up, and shutdown (MSS) of the SRU. Planned MSS activities that were not represented in the permit application are not authorized by this permit. The performance of each planned maintenance activity and the emissions associated with it shall be recorded and include at least the following information: **(PSD)**

SPECIAL CONDITIONS

Permit Numbers 83193 and PSDTX1104

Page 8

- A. The physical location at which emissions from the planned MSS activity occurred, including the emission point number, common name, and any other identifier for the point at which the emissions were released into the atmosphere;
- B. The type of planned MSS activity and the reason for the planned activity;
- C. The date and time of the planned MSS activity and its duration;
- D. The estimated quantity of each air contaminant or mixture of air contaminants, emitted with the data and methods used to determine it. The emissions shall be estimated using the methods identified in the permit application, consistent with good engineering practice, as identified below.

FLR1: Measured flare stream flow rate, measured H₂S concentration, and estimated/measured acid gas VOC concentration to determine flow to flare and net heating value. Use 98 percent flare destruction efficiency and TCEQ flare factors for CO and NO_x.

BLR: Fuel flow rate and duration of firing for a maximum of 30 days in any rolling 12-month period at a maximum fired duty of 4.25 MMBtu per hour. **(3/10)**

TGI: Measured SO₂ emissions using CEMS

- 16. The SRU shall be depressurized, emptied and degassed in accordance with the following requirements. **(PSD)**
 - A. A sulfur purge (catalyst bed burnoff) shall be performed on the SRU prior to opening it to atmosphere. The sulfur dioxide concentration in the gas entering the TGI shall be confirmed to be less than 100 ppmv using a colorimetric gas detector tube and the value recorded prior to stopping the purge and venting the SRU to atmosphere. The sulfur dioxide CEMS and flow meter shall be used to determine the emissions during the sulfur purge.
 - B. The sulfur purge shall not be performed if acid gas is being flared at a flare stream sulfur load of greater than 3 LTPD.
- 17. The flare shall be designed and operated in accordance with the following requirements: **(PSD)**

SPECIAL CONDITIONS

Permit Numbers 83193 and PSDTX1104

Page 9

- A. The flare system shall be designed such that the combined assist natural gas and waste stream to the flare meets the 40 CFR § 60.18 specifications of minimum heating value and maximum tip velocity under normal, upset, and maintenance flow conditions.

The heating value and velocity requirements shall be satisfied during operations authorized by this permit. Flare testing per 40 CFR § 60.18(f) may be requested by the appropriate TCEQ Regional Office to demonstrate compliance with these requirements.

- B. The flare shall be operated with a flame present at all times and/or have a constant pilot flame. The pilot flame shall be continuously monitored by a thermocouple or an infrared monitor. The time, date, and duration of any loss of pilot flame shall be recorded. Each monitoring device shall be accurate to, and shall be calibrated at a frequency in accordance with, the manufacturer's specifications
- C. The flare shall be operated with no visible emissions except periods not to exceed a total of five minutes during any two consecutive hours.
- D. The permit holder shall install a continuous flow monitor and H₂S concentration analyzer that provide a record of the vent stream flow and H₂S concentration to the flare. The flow monitor sensor and analyzer sample points shall be installed in the vent stream such that the total planned MSS vent stream to the flare is measured and analyzed. Readings shall be taken at least once every 15 minutes and the average hourly values of the flow and composition shall be recorded each hour.

The monitors shall be calibrated on an annual basis to meet the following accuracy specifications: the flow monitor shall be ± 5.0 percent, temperature monitor shall be ± 2.0 percent at absolute temperature, and pressure monitor shall be ± 5.0 mm Hg. The H₂S monitor shall meet the requirements of 40 CFR Part 60 Performance Specification 7. The monitors and analyzers shall operate as required by this section at least 95 percent of the time when the acid gas is directed to the flare, averaged over a rolling 12-month period.

SPECIAL CONDITIONS

Permit Numbers 83193 and PSDTX1104

Page 10

Flared gas net heating value and actual exit velocity determined in accordance with 40 CFR § 60.18(f)(4) shall be recorded at least once every 15 minutes. Hourly mass emission rates shall be determined and recorded using the above readings and the emission factors used in the permit application. Flare emissions shall be calculated each month and the rolling-12 month flare emissions recorded.

18. If the SRU planned MSS will require a full SRU shutdown, the SRU shall continue to operate and process acid gas until the sulfur production drops to 3 LTPD on an hourly average, at which time flaring may commence and the SRU shutdown. Flaring may continue for no more than 24 hours during SRU shutdown. Acid gas flaring may occur during SRU start-up for a period not to exceed 24 hours. **(PSD)**

EMISSION SOURCES - MAXIMUM ALLOWABLE EMISSION RATES

Permit Numbers 83193 and PSDTX1104

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

Subject: Working Draft Permit - FOP O2568/ Project 38294, IACX Rock Creek LLC/ Sneed Booster Station

Good Afternoon Ms. Holt,

I have been assigned to the Federal Operating Permit (FOP) revision application of Permit No. O2568 for IACX Rock Creek LLC, Sneed Booster Station. This application has been assigned Project No. 38294. Please

address all correspondence pertaining to this permit application, including any updates, to me at the address below, and use both the Permit and Project reference numbers above to facilitate tracking.

In addition, I wanted to let you know that EPA has, on occasion, objected to Title V permits based on the following:

- a. NSR permit and PBR monitoring sufficiency –please refer to our periodic monitoring guidance for reference of monitoring that EPA has, so far, considered sufficient.
- b. Reference to confidential business information (CBI) in NSR permits and PBR submittals.
- c. High level terms in the SOP Applicable Requirement Summary Table. The high level terms are sometimes used in SOPs when unit attribute forms have not yet been updated due to regulatory amendments.
- d. Accuracy of PBR information provided on the supplemental table and in the permit – please refer to Forms OP-PBRSUP and OP-REQ1 Instructions.

If you have any questions or concerns on any of these items or think you need to do any additional updates, let me know and we can discuss further.

I have conducted a technical review of this application and I have attached an electronic copy of the Working Draft Permit (WDP) for your review. This WDP contains the TCEQ determination of applicable requirements based on the information submitted in your application, and any updates provided.

Please review the WDP and the Major NSR Summary Table and submit to me any comments you have regarding it by October 9, 2025. Please submit a written response by this deadline, even if you are not making any comments on the content of the WDP or the Major NSR Summary Table. Note that any application updates necessary to make requested changes must accompany the WDP comments.

Please submit a written response by this deadline, even if you are not making any comments on the content of the WDP.

There are a few updates required with the application which are listed below.

Please review the "SOP Technical Review Fact Sheet" located at http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_wdp_factsheet.pdf. This guidance contains important information regarding the review process, application updates, WDP review and comment procedures.

Note that a Certification by Responsible Official (Form OP-CRO1) for any uncertified submittals, including application updates supporting the WDP comments is required to be submitted with the WDP response. After final review of the WDP, additional changes, supported by application updates, may require certification. I will advise you of these changes at a later date. Prior to transmittal of the Public Notice/Announcement Authorization Package, a duly signed OP-CRO1 form may be required which includes the specific dates or time-period of all submitted application documentation that were not previously certified. I will advise you of this requirement prior to sending the Public Notice/Announcement Authorization.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Please notify me when these updates have been submitted.

As required on Form OP-1, question IV.D, please remember the FOP application and all application updates must be submitted to EPA Region 6 at R6AirPermitsTX@epa.gov and to the TCEQ regional office having jurisdiction. This submittal information can be found on our website at [Where to Submit FOP Applications and Permit-Related Documents](#).

Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Thank you for your cooperation.

Sincerely,

Liam Lin

1. EXECUTIVE SUMMARY

IACX Rock Creek LLC. (IACX) owns and operates a gas plant located in Moore County, Texas (Sneed Booster Station). IACX operates under Texas Commission on Environmental Quality (TCEQ) Customer Reference Number (CN) 605745843. The Sneed Booster Station has been assigned Regulated Entity Number (RN) 100220052. Equipment at the site is authorized under two NSR permits and various Permits By Rule (PBRs). NSR Permit No. 73350 includes some of the engines at the site, flare pilot emissions, tanks, and fugitives. NSR Permit No. 83193/PSDTX1104 includes the incinerator and associated SRU equipment, as well as a process flare.

The Sneed Booster Station is located in Moore County, Texas. Moore County is currently designated as an attainment area for all criteria pollutants.¹ The Sneed Booster Station is a major source with respect to the Prevention of Significant Deterioration (PSD). In addition, the Sneed Booster Station is a major source with respect to the Federal Operating Permit Program (Title V) and operates under Title V Operating Permit No. O-2568.

The Sneed Booster Station is subject to the Texas Federal Operating Permits Program according to Title 30 of the Texas Administrative Code Section 122.120 (30 TAC §122.120). Due to proposed changes at the site, Operating Permit No. O-2568 must be revised per 30 TAC §122.210. Therefore, IACX is submitting this minor revision application according to the requirements listed in 30 TAC §122.215 through §122.217. The following section describes the proposed changes at the site resulting in updates to the operating permit.

New Source Review (NSR) Permit No. 83193 was amended and issued on December 16, 2024. It was amended to authorize the operation of the Acid Gas Flare (EPN FLR1) when the SRU is down and the amine unit is vented to the Acid Gas Flare (EPN FLR1) or when the Tail Gas Incinerator (EPN TGI) is down and SRU is vented to the Acid Gas Flare (EPN FLR1). IACX proposes to incorporate these changes into SOP No. O-2568.

1.1 TITLE V ACTIONS

With this Title V revision, there are no changes to the applicable requirements for Title V Unit ID FLR1.

1.2 APPLICATION CONTENTS

The enclosed SOP minor revision application for the Sneed Booster Station consists of the following forms:

- (1) Emission point identification - either specific equipment designation or emission point number from a plot plan.
- (2) Specific point source names. For fugitive sources, use an area name or fugitive source name.
- (3)

CO	-	carbon monoxide
NO _x	-	total oxides of nitrogen
PM ₁₀	-	particulate matter (PM) equal to or less than 10 microns in diameter. Where PM is not listed, it shall be assumed that no PM greater than 10 microns is emitted.
SO ₂	-	sulfur dioxide
VOC	-	volatile organic compounds as defined in Title 30 Texas Administrative Code §101.1
H ₂ S	-	hydrogen sulfide
- (4) Fugitive emissions are an estimate only and should not be considered as a maximum allowable emission rate.
- (5) Prevention of significant deterioration pollutant.
- (6) A maximum of 30 days of operation on a rolling 12-month basis.
- (7) Limited at an average 12-month rolling firing rate of 33,590 MMBtu per year.
- (8) Routing of acid gas waste stream from amine units to flare while SRU is down is limited to maximum of 100 hours per year.

* Emission rates are based on and the facilities are limited by the following maximum operating schedule:

24 Hrs/day 7 Days/week 52 Weeks/year

** Compliance with annual emission limits is based on a rolling 12-month period.
