## TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

*Protecting Texas by Reducing and Preventing Pollution*

July 11, 2025

THE HONORABLE CESAR BLANCO  
TEXAS SENATE  
PO BOX 12068  
AUSTIN TX 78711-2068

Re: Accepted Federal Operating Permit Renewal Application  
Project Number: 38512  
Permit Number: O1348  
Western Refining Company LLC  
El Paso Refinery  
El Paso, El Paso County  
Regulated Entity Number: RN100213016  
Customer Reference Number: CN601510191

Dear Senator Blanco:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) renewal application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-106.411944,31.7675&level=13>.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

To Whom It May Concern:

Western Refining Company, LLC (Western) owns and operates a refinery, wastewater treatment plant, and associated storage tanks located at the El Paso Refinery in El Paso, Texas. Western complies with Title V requirements by using SOP O-1348 to authorize operation of the refinery portion of the facility. SOP O-1348 is set to expire on January 12, 2026, and a renewal application is required to be submitted by July 12, 2025.

Western submits the enclosed renewal application for a Title V Site Operating Permit to operate the facilities located within the refinery portion of their El Paso Refinery. The application fee will be submitted electronically via the State of Texas Environmental Electronic Reporting System (STEERS).

If you have any questions about this application, please contact Ms. Rebecca Ayala of my staff at (915) 526-6394.

# Section 1 Introduction

Western Refining Company, LLC (WRC), and Western Refining Terminals, LLC (WRT), collectively known as Western, own and operate an integrated petroleum refinery in El Paso, Texas (El Paso Refinery). The El Paso Refinery is located at 6501 Trowbridge Drive and is TCEQ Regulated Entity Reference RN100213016. An area map is provided as Figure 1.

The El Paso Refinery operates under TCEQ Air Quality Account EE-0015-H and TCEQ Customer Reference Numbers CN601510191 (Refining) and CN604485763 (Terminals). Emission sources at the El Paso Refinery are authorized under various mechanisms, including TCEQ New Source Review Permits 18897 (Refining) and 93546 (Terminals). The El Paso Refinery is an existing major source under the Prevention of Significant Deterioration (PSD) and Title V programs. The refinery portion of the site is authorized by the Title V program via SOP O-1348 and the terminal portion of the site is authorized via SOP O-4603.

Western complies with Title V requirements by using SOP O-1348 to authorize operation of the refinery portion of the facility. SOP O-1348 is set to expire on January 12, 2026, and a renewal application is required to be submitted by July 12, 2025. Western submits the enclosed renewal application for a Title V Site Operating Permit to operate the facilities located within the refinery portion of their El Paso Refinery.

Details of the application can be found in Section 3 of this notification.

This application is being prepared in accordance with 30 TAC §122. This application includes all applicable forms for submittal (see Attachments).

## Section 2 Process Description

SOP O-1348 authorizes the operation of the sources associated with the refinery portion of the El Paso Refinery, which includes emissions units in the North Plant and South Plant. The North and South Plants include crude distillation units, naphtha fractionating units, hydrotreating and reheniforming units, a fluid catalytic cracking unit (FCCU), alkylation units, light ends recovery units, a hydrogen plant, and associated combustion and utilities. The units are designed to process crude oils to produce a variety of petroleum products, such as liquefied petroleum gas (LPG), butane, gasoline, diesel, jet fuel, fuel oil, and other heavy products such as carbon black oil and asphalt.

A plot plan showing emission points is included as Figure 2, and a process flow diagram is included as Figure 3.

## Section 3 Project Description

Western complies with Title V requirements by using SOP O-1348 to authorize operation of the refinery portion of the facility. SOP O-1348 is set to expire on January 12, 2026, and a renewal application is required to be submitted by July 12, 2025. Western is humbly submitting the enclosed renewal application for a Title V Site Operating Permit to operate the facilities located within the

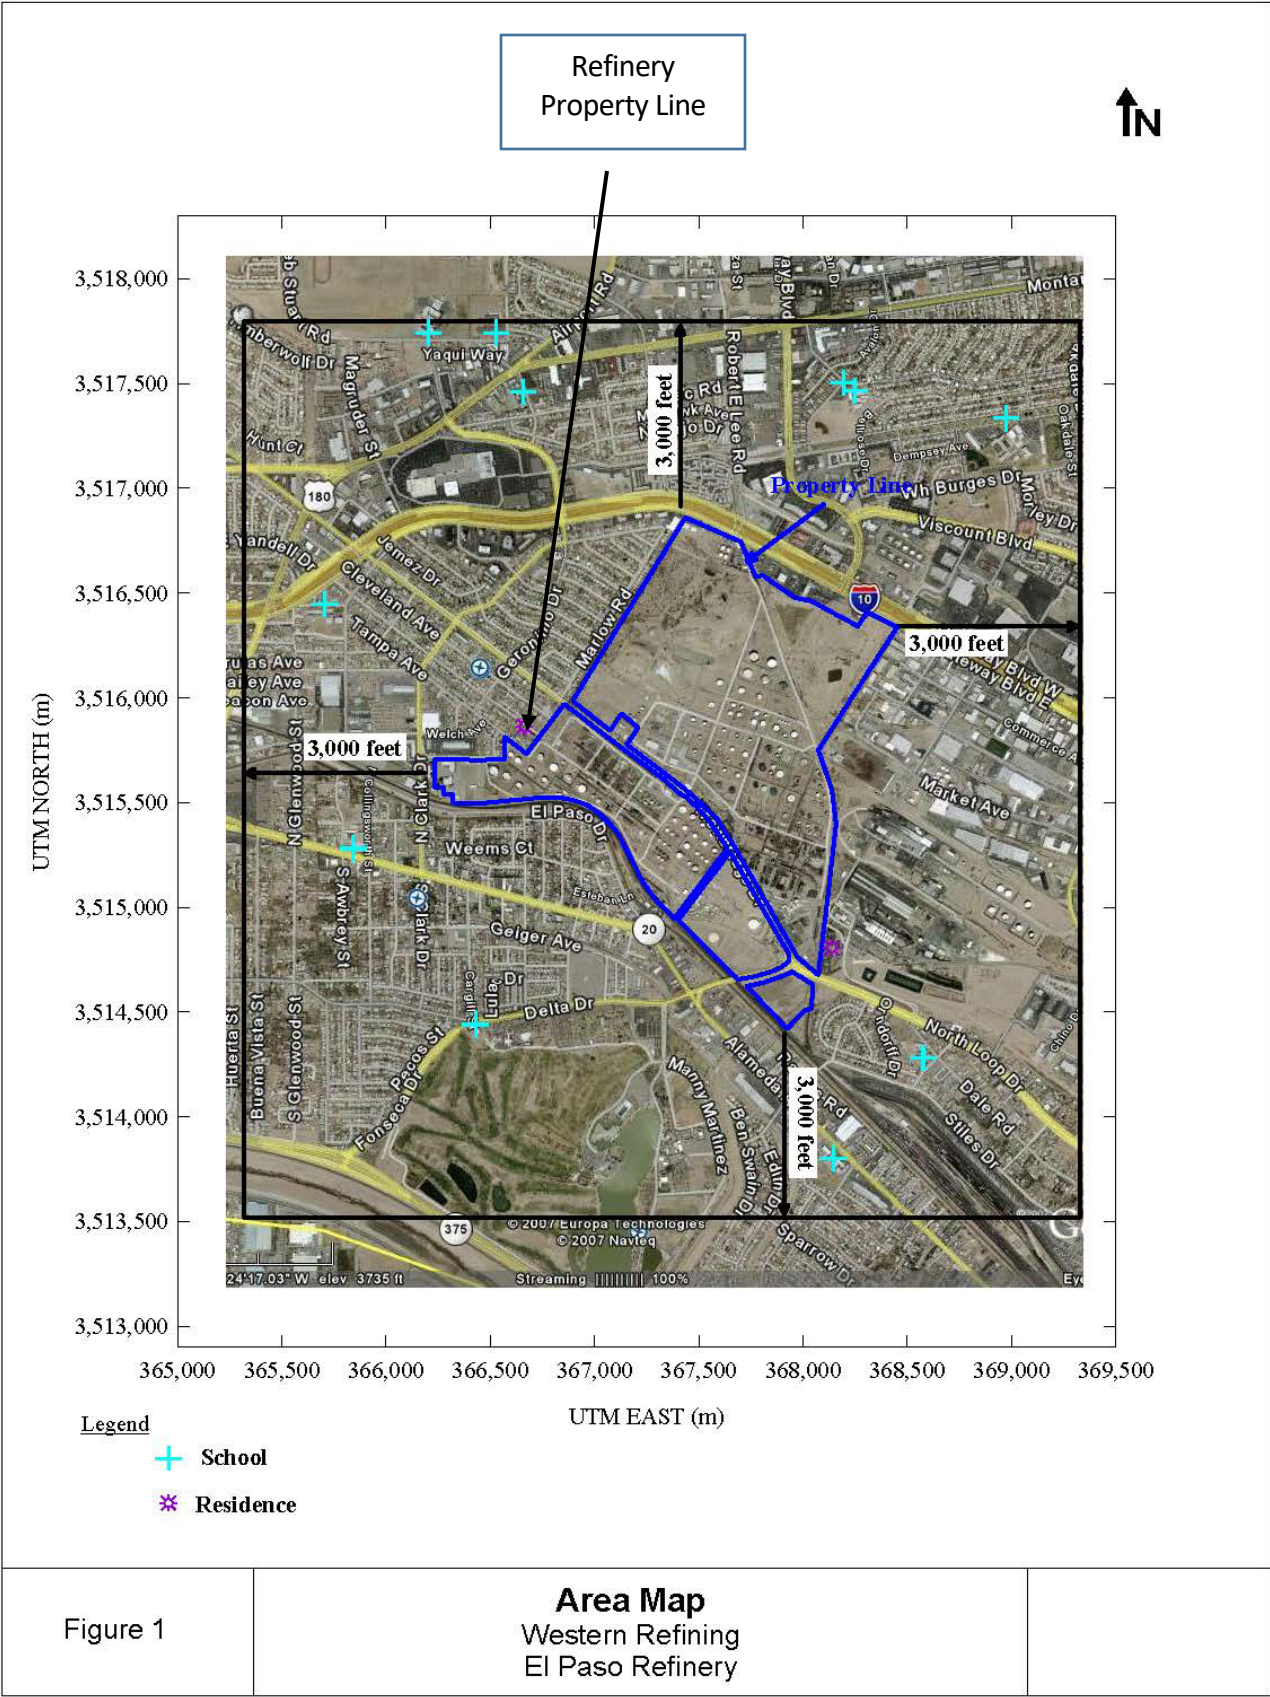

refinery portion of their El Paso Refinery. Along with the required SOP renewal forms, Western requests an SOP revision to include the following modifications:

- Addition of a diesel engine-driven emergency use fire pump (FIREP-4).
- Correction of Boiler F-1013 fuel type to natural gas. The fuel is a mixture of refinery fuel gas and natural gas.
- Switch inspection requirements for domed EFR tank (T-4114) to comply with IFR tank inspection requirements.
- Correction to include existing Tank 120 in the Refinery Title V permit that was inadvertently omitted during previous renewal.

The required SOP administrative and technical application forms are included in the attachments below. SOP requested revisions are summarized in Form OP-2.

For SOP applications, answer ALL questions unless otherwise directed.

◆ For GOP applications, answer ONLY these questions unless otherwise directed.

I. Title 30 TAC Chapter 111 - Control of Air Pollution from Visible Emissions and Particulate Matter		
A. Visible Emissions		
◆ 1.	The application area includes stationary vents constructed on or before January 31, 1972.	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
◆ 2.	The application area includes stationary vents constructed after January 31, 1972. <i>If the responses to Questions I.A.1 and I.A.2 are both "No," go to Question I.A.6. If the response to Question I.A.1 is "No" and the response to Question I.A.2 is "Yes," go to Question I.A.4.</i>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
◆ 3.	The application area is opting to comply with the requirements for stationary vents constructed after January 31, 1972 for vents in the application area constructed on or before January 31, 1972.	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
◆ 4.	All stationary vents are addressed on a unit specific basis.	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
◆ 5.	Test Method 9 (40 CFR Part 60, Appendix A, Method 9 - Visual Determination of the Opacity of Emissions from Stationary Sources) is used to determine opacity of emissions in the application area.	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
◆ 6.	The application area includes structures subject to 30 TAC § 111.111(a)(7)(A).	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
◆ 7.	The application area includes sources, other than those specified in 30 TAC § 111.111(a)(1), (4), or (7), subject to 30 TAC § 111.111(a)(8)(A).	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
◆ 8.	Emissions from units in the application area include contributions from uncombined water.	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
◆ 9.	The application area is located in the City of El Paso, including Fort Bliss Military Reservation, and includes solid fuel heating devices subject to 30 TAC § 111.111(c).	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A

<b>I. Title 30 TAC Chapter 111 - Control of Air Pollution from Visible Emissions and Particulate Matter (continued)</b>		
<b>B. Materials Handling, Construction, Roads, Streets, Alleys, and Parking Lots</b>		
1. Items a - d determine applicability of any of these requirements based on geographical location.		
◆	a. The application area is located within the city of El Paso.	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
◆	b. The application area is located within the Fort Bliss Military Reservation, except areas specified in 30 TAC § 111.141.	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
◆	c. The application area is located in the portion of Harris County inside the loop formed by Beltway 8.	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
◆	d. The application area is located in the area of Nueces County outlined in Group II state implementation plan (SIP) for inhalable particulate matter adopted by the TCEQ on May 13, 1988.	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
<i>If there is any "Yes" response to Questions I.B.1.a - d, answer Questions I.B.2.a - d. If all responses to Questions I.B.1.a-d are "No," go to Section I.C.</i>		
2. Items a - d determine the specific applicability of these requirements.		
◆	a. The application area is subject to 30 TAC § 111.143.	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
◆	b. The application area is subject to 30 TAC § 111.145.	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
◆	c. The application area is subject to 30 TAC § 111.147.	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
◆	d. The application area is subject to 30 TAC § 111.149.	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
<b>C. Emissions Limits on Nonagricultural Processes</b>		
◆	1. The application area includes a nonagricultural process subject to 30 TAC § 111.151.	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
	2. The application area includes a vent from a nonagricultural process that is subject to additional monitoring requirements. <i>If the response to Question I.C.2 is "No," go to Question I.C.4.</i>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
	3. All vents from nonagricultural process in the application area are subject to additional monitoring requirements.	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No

III. Title 30 TAC Chapter 115 - Control of Air Pollution from Volatile Organic Compounds (continued)		
C. Industrial Wastewater		
1.	The application area includes affected VOC wastewater streams of an affected source category, as defined in 30 TAC § 115.140. <i>If the response to Question III.C.1 is "No" or "N/A," go to Section III.D.</i>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A
2.	The application area is located at a petroleum refinery in the Beaumont/Port Arthur or Houston/Galveston/Brazoria area. <i>If the response to Question III.C.2 is "Yes" and the refinery is in the Beaumont/Port Arthur area, go to Section III.D.</i>	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
3.	The application area is complying with the provisions of 40 CFR Part 63, Subpart G, as an alternative to complying with this division (relating to Industrial Wastewater). <i>If the response to Question III.C.3 is "Yes," go to Section III.D.</i>	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
4.	The application area is located at a plant with an annual VOC loading in wastewater, as determined in accordance with 30 TAC § 115.148, less than or equal to 10 Mg (11.03 tons). <i>If the response to Question III.C.4 is "Yes," go to Section III.D.</i>	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
5.	The application area includes wastewater drains, junction boxes, lift stations, or weirs that are subject to the control requirements of 30 TAC § 115.142(1).	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
6.	The application area includes wastewater drains, junction boxes, lift stations, or weirs that handle streams chosen for exemption under 30 TAC § 115.147(2).	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
7.	The application area includes wastewater drains, junction boxes, lift stations, or weirs that have an executive director approved exemption under 30 TAC § 115.147(4).	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
D. Loading and Unloading of VOCs		
◆ 1.	The application area includes VOC loading operations.	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
◆ 2.	The application area includes VOC transport vessel unloading operations. <i>For GOP applications, if the responses to Questions III.D.1 - D.2 are "No," go to Section III.E.</i>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No

The application area is located at a site that is subject to 40 CFR 63, Subpart F and the application area includes process vents, storage vessels, transfer racks, or waste streams associated with a chemical manufacturing process subject to 40 CFR 63, Subpart F. <i>If the response to Question VIII.C.1 is "No," go to Section VIII.D.</i>	<input type="checkbox"/> Yes <input type="checkbox"/> No
2. The application area includes fixed roofs, covers, and/or enclosures that are required to comply with 40 CFR § 63.148.	<input type="checkbox"/> Yes <input type="checkbox"/> No
3. The application area includes vapor collection systems or closed-vent systems that are required to comply with 40 CFR § 63.148. <i>If the response to Question VIII.C.3 is "No," go to Question VIII.C.8.</i>	<input type="checkbox"/> Yes <input type="checkbox"/> No
4. The application area includes vapor collection systems or closed-vent systems that are constructed of hard piping.	<input type="checkbox"/> Yes <input type="checkbox"/> No
5. The application area includes vapor collection systems or closed-vent systems that contain bypass lines that could divert a vent stream away from a control device and to the atmosphere. <i>If the response to Question VIII.C.5 is "No," go to Question VIII.C.8.</i>	<input type="checkbox"/> Yes <input type="checkbox"/> No
<b><i>Vapor Collection and Closed Vent Systems</i></b>	
6. Flow indicators are installed, calibrated, maintained, and operated at the entrances to bypass lines in the application area.	<input type="checkbox"/> Yes <input type="checkbox"/> No
7. Bypass lines in the application area are secured in the closed position with a car-seal or a lock-and-key type configuration.	<input type="checkbox"/> Yes <input type="checkbox"/> No

Re: Request for Alternative to the Continuous  
Opacity Monitoring System (COMS)

Dear Ms. Allen:

This is in response to the request of El Paso Refinery, L.P. (EPR) dated March 22, 1991, for the approval of an alternative to the Continuous Opacity Monitoring System (COMS) requirement of 40 C.F.R. § 60.105(a)(1), Subpart J. The following continuous parameter monitoring protocol is approved as an alternative to the COMS required by § 60.105(a)(1):

1. EPR shall continuously monitor and record:
  - a). the pressure drop across the wet gas scrubber (WGS),
  - b). the scrubber liquid to gas ratio (L/G), and
  - c). the effluent temperature immediately downstream of the demister section of the control device.
2. EPR is required to determine when excess emissions occur and to submit quarterly reports of those excess emissions.
3. The baseline values of the operating parameters identified in Condition No. 1, above shall be established during the performance test required per Special Provision 8, in Permit C-18897.
4. For the purposes of reporting excess emissions pursuant to Condition No. 2, above, excess emissions are defined as any three-hour period during which any operating parameter is greater than the baseline value established pursuant to Condition No. 3, above.

*Copied to Air Dist. 2/24/92.*

This approval is limited to EPR's request to amend their construction permit, C-18897, for the modified fluid catalytic cracking unit as referenced in its letter dated March 22, 1991.

RE: Alternative Monitoring Plan (AMP) – New Source Performance Standards (NSPS) for Petroleum Refineries (40 CFR Part 60 Subparts J and Ja) and National Emission Standards for Hazardous Air Pollutants (NESHAP) for Petroleum Refineries (40 CFR Part 63 Subpart UUU) – Parametric Monitoring In lieu of Continuous Opacity Monitoring System for Fluidized Catalytic Cracking Unit Wet Gas Scrubber at the El Paso Refinery (*formerly owned by Western Refining Company L.P.*), located in El Paso, Texas.

Dear Mr. Adams:

This letter is in response to your request dated December 11, 2018, pertaining to a prior AMP approval for the Fluidized Catalytic Cracking Unit (FCCU) Wet Gas Scrubber (WGS) subject to NSPS Subpart J. You have requested that we update the AMP approval to include opacity monitoring requirements at 40 C.F.R. § 63.1573(g), since the facility is also subject to NESHAP Subpart UUU. Upon review of all available information, the United States Environmental Protection Agency (EPA) approves your AMP request for the FCCU WGS, as delineated fully in the enclosure to this letter.

If operations change from those represented in the enclosure for the FCCU operations at the El Paso Refinery, this approval may become void and a new AMP request will be necessary. If you have any questions or concerns about this approval, please contact Prince Nfodzo of my staff at [nfodzo.prince@epa.gov](mailto:nfodzo.prince@epa.gov), or at 214-665-7491.

Sincerely,

**ENCLOSURE**  
**Marathon El Paso Refinery**  
**Modified Alternative Monitoring Plan (AMP) for**  
**FCCU WGS Parametric Monitoring in Lieu of COMS**

BACKGROUND INFORMATION

Marathon (formerly Western Refining Company L.P.) has proposed modifications to EPA's prior approval of an alternative monitoring plan (AMP) for the FCCU WGS at the El Paso Refinery ("MER"), in consideration of applicable rule subpart changes. This Enclosure provides EPA's evaluation of the current operational status and rule requirement implementation for the WGS, where parametric monitoring is proposed in lieu of continuous opacity monitoring system (COMS) requirements. Since MER needs to comply with Opacity and Particulate Matter (PM) emission limitations under NSPS Part 60 Subparts J ("Refinery NSPS") and NESHAP Part 63 Subpart UUU ("Refinery MACT II"), an AMP is necessary to address the issue of reliability for monitoring opacity when moisture levels are high in a stack.

TECHNICAL INFORMATION FOR AMP APPROVAL

The WGS *Liquid-to-Gas Ratio* ("L/G Ratio") is one critical operating parameter to be monitored for ensuring scrubber performance in all the scrubber designs evaluated across the refinery sector. Although the L/G Ratio involves measurement of both the total liquid flow rate to the scrubber and the total gas flow rate through the scrubber, EPA views the L/G Ratio as a single operating parameter for compliance monitoring. Historically, pressure drop had been used as a critical operating parameter for venturi type scrubbers in addition to the L/G Ratio, since pressure drop had been shown to correlate directly with scrubber efficiency. However, as scrubber designs evolved to meet the needs of multiple pollutant removal and/or flexibility in site-specific process operations, pressure drop became a redundant parameter for monitoring compliance in some scrubber systems.

Ultimately, the final selection of critical operating parameters is entirely dependent upon ensuring that effective scrubber performance is maintained and that emission limitations are continually met, given those needs associated with facility-specific operations of the FCCU Catalyst Regenerator and the WGS type configuration. Through initial and subsequent performance testing, operating parameter limits ("OPLs") are established either as a minimum, average, or maximum value over time intervals for reporting that are recognized as representative of the performance testing conducted to demonstrate compliance with emission limitations.

Specifically, MER proposed the following set of OPLs to ensure that the WGS would function as intended and that emissions from the FCCU Regenerator would continuously meet the regulatory requirements for opacity and particulate matter:

1. Minimum Liquid-to-Gas Ratio (L/G): defined as total liquid flowrate (L) divided by total gas flowrate (G) through the WGS.
2. Minimum pressure drop across the WGS ( $\Delta P$ ).

PROVISIONS FOR MODIFIED AMP

MER has requested modifying the prior EPA approved AMP for the FCCU WGS opacity parametric monitoring under NSPS Subpart J to cover opacity monitoring requirements under the

Refinery MACT UUU regulations, and to revise the parameters that are monitored. MER provided test results for performance tests conducted at the FCCU WGS March 29-30, 2006 and December 1-2, 2016.

EPA has reviewed MER's request and performance test results and approves the following OPLs.

1. **Minimum Liquid-to-Gas Ratio (L/G):** The minimum L/G ratio shall be 19.3 GPM/CFM.
2. **Minimum pressure drop across the WGS ( $\Delta P$ ):** The minimum  $\Delta P$  shall be 0.50 psig

Compliance for the above OPLs is determined on an hourly rolling average based on evaluation of results from three one-hour test runs, consistent with the FCCU operating conditions and corresponding test data from the most recent particulate matter performance test. Any parameter values that are less than the approved cut-off levels represent and shall be reported as a deviation. MER shall incorporate the terms of this AMP approval into the facility's New Source Review (NSR) and Title V permits for federal enforceability.

As per the requirements at 40 CFR § 63.1571(a)(5), MER shall conduct performance tests at least once every five years to verify that the established values for OPLs are still representative of facility operations and WGS performance, or to determine new representative values. A copy of each performance test report must be submitted to EPA and the permitting authority, along with any changes to the prior OPL values resulting from the data obtained during testing at the FCCU WGS.

**Modified Alternative Monitoring Plan (AMP) for**  
**FCCU WGS Parametric Monitoring in Lieu of COMS**

BACKGROUND INFORMATION

Marathon (formerly Western Refining Company L.P.) has proposed modifications to EPA's prior approval of an alternative monitoring plan (AMP) for the FCCU WGS at the El Paso Refinery ("MER"), in consideration of applicable rule subpart changes. This Enclosure provides EPA's evaluation of the current operational status and rule requirement implementation for the WGS, where parametric monitoring is proposed in lieu of continuous opacity monitoring system (COMS) requirements. Since MER needs to comply with Opacity and Particulate Matter (PM) emission limitations under NSPS Part 60 Subparts J ("Refinery NSPS") and NESHAP Part 63 Subpart UUU ("Refinery MACT II"), an AMP is necessary to address the issue of reliability for monitoring opacity when moisture levels are high in a stack.

TECHNICAL INFORMATION FOR AMP APPROVAL

The WGS *Liquid-to-Gas Ratio* ("L/G Ratio") is one critical operating parameter to be monitored for ensuring scrubber performance in all the scrubber designs evaluated across the refinery sector. Although the L/G Ratio involves measurement of both the total liquid flow rate to the scrubber and the total gas flow rate through the scrubber, EPA views the L/G Ratio as a single operating parameter for compliance monitoring. Historically, pressure drop had been used as a critical operating parameter for venturi type scrubbers in addition to the L/G Ratio, since pressure drop had been shown to correlate directly with scrubber efficiency. However, as scrubber designs evolved to meet the needs of multiple pollutant removal and/or flexibility in site-specific process operations, pressure drop became a redundant parameter for monitoring compliance in some scrubber systems.

Ultimately, the final selection of critical operating parameters is entirely dependent upon ensuring that effective scrubber performance is maintained and that emission limitations are continually met, given those needs associated with facility-specific operations of the FCCU Catalyst Regenerator and the WGS type configuration. Through initial and subsequent performance testing, operating parameter limits ("OPLs") are established either as a minimum, average, or maximum value over time intervals for reporting that are recognized as representative of the performance testing conducted to demonstrate compliance with emission limitations.

Specifically, MER proposed the following set of OPLs to ensure that the WGS would function as intended and that emissions from the FCCU Regenerator would continuously meet the regulatory requirements for opacity and particulate matter:

1. Minimum Liquid-to-Gas Ratio (L/G): defined as total liquid flowrate (L) divided by total gas flowrate (G) through the WGS.
2. Minimum pressure drop across the WGS ( $\Delta P$ ).

PROVISIONS FOR MODIFIED AMP

MER has requested modifying the prior EPA approved AMP for the FCCU WGS opacity parametric monitoring under NSPS Subpart J to cover opacity monitoring requirements under the

Refinery MACT UUU regulations, and to revise the parameters that are monitored. MER provided test results for performance tests conducted at the FCCU WGS March 29-30, 2006 and December 1-2, 2016.

EPA has reviewed MER's request and performance test results and approves the following OPLs.

1. **Minimum Liquid-to-Gas Ratio (L/G):** The minimum L/G ratio shall be 19.3 GPM/CFM.
2. **Minimum pressure drop across the WGS ( $\Delta P$ ):** The minimum  $\Delta P$  shall be 0.50 psig

Compliance for the above OPLs is determined on an hourly rolling average based on evaluation of results from three one-hour test runs, consistent with the FCCU operating conditions and corresponding test data from the most recent particulate matter performance test. Any parameter values that are less than the approved cut-off levels represent and shall be reported as a deviation. MER shall incorporate the terms of this AMP approval into the facility's New Source Review (NSR) and Title V permits for federal enforceability.

As per the requirements at 40 CFR § 63.1571(a)(5), MER shall conduct performance tests at least once every five years to verify that the established values for OPLs are still representative of facility operations and WGS performance, or to determine new representative values. A copy of each performance test report must be submitted to EPA and the permitting authority, along with any changes to the prior OPL values resulting from the data obtained during testing at the FCCU WGS.

RE: Performance Test Waiver and Alternative Monitoring Request

**40 CFR Part 60 Subparts NNN and RRR - Standards of Performance for Volatile Organic Compound (VOC) Emissions From Synthetic Organic Chemical Manufacturing Industry (SOCMI) Distillation Operations (Subpart NNN) and Reactor Processes (Subpart RRR)**

Western Refining El Paso Refinery, Distillation Unit Vents at the El Paso Refinery located in El Paso, Texas.

Dear Mr. Adams:

This letter is in response to your request dated January 17, 2018, for the above referenced waiver and alternative monitoring under New Source Performance Standards (NSPS). As delineated below, we are approving your request for meeting Subpart RRR in lieu of Subpart NNN requirements for testing, monitoring, reporting and record-keeping, *related specifically to the use of boilers, process heaters, and flares* for compliance with the standards of both Subparts.

In your letter, you requested to substitute NSPS RRR requirements in lieu of requirements for NSPS NNN as an alternative flow and temperature monitoring for the vent streams associated with the following distillation units process vents:

C-550 De-butanizer (Light ends Recovery Unit)  
F-1306 De-butanizer (South Fluidized Catalytic Cracking Unit)  
F-801 De-isobutanizer (South Alky Units No. 1 and 2)  
F-802 De-propanizer (South Alky Units No. 1 and 2)  
F-803 De-butanizer (South Alky Units No. 1 and 2)  
F-7107 Stabilizer (South Butamer Unit)

You also requested a waiver of the NSPS performance testing requirement for the following boilers and furnaces due to the off gas from the distillation units being burned as primary fuel:

Boiler No. 1 (H-901)  
Boiler No. 3 (H-903)  
No. 11 Boiler

pag 3.

NTD 10.17.2.4

Boiler F-1013  
CPS Crude Heater (H-103)  
Vacuum Unit Heater (H-1601)  
Vacuum Preflash Heater (H-1101)  
CGHT First Stage Heater  
CGHT Second Stage Heater  
CGHT Stabilizer Reboiler  
No. 6 Crude Unit Furnace 1  
No. 6 Crude Unit Furnace 2  
Rheniformer Reactor Furnace (F-4150)  
Rheniformer Reactor Furnace (F-4160)  
Rheniformer Reactor Furnace (F-4170)  
Rheniformer Reactor Furnace (F-4180)  
Plant 39 Diesel Furnace  
Plant 39 Furnace

Your letter indicates that these distillation units' off gas is normally routed to the fuel gas system, where it is burned as a primary fuel in combination with other refinery fuel gas and natural gas. Our understanding is that the fuel gas system is comprised of boilers and process heaters, all with heat input capacities less than 150 one million British Thermal Units per hour (MMBTU/hr). Vent gases mixed with refinery fuel and natural gas constitute the primary fuel for these boiler or furnace units and are introduced into the flame zone of each unit. In addition, none of the distillation vents are equipped with a bypass directly to the atmosphere.

The United States Environmental Protection Agency (EPA) hereby approves your request to waive the initial performance test for those vents specified in your letter as being *introduced with the primary fuel* into a boiler or process heater in accordance with 40 CFR §60.8(b), and as provided for in §60.704(b)(5). Furthermore, EPA approves your request to implement the Subpart RRR monitoring provisions in lieu of complying with the monitoring provisions of 40 CFR §60.663(b) and 40 CFR §60.663(c) under Subpart NNN. Finally, EPA approves your request to comply with the reporting and recordkeeping requirements of Subpart RRR in lieu of the reporting and recordkeeping requirements of Subpart NNN since these reporting and recordkeeping requirements correspond directly to those monitoring requirements to be implemented for the distillation units process vents under Subpart RRR. Please be advised that you must provide a copy of the schematic required by Subpart RRR §60.705(s) in your initial report to the state agency, and also maintain a copy on site for the life of the system to ensure that the affected vent streams are being routed to appropriate control devices under this approval.

This approval is based upon the information submitted in your request for those units specified and identified within this letter. This approval is consistent with previous determinations made by EPA for Subpart NNN affected facilities. Enclosed, please find our detailed comparison of Subpart NNN and Subpart RRR requirements in relation to your request. If any new information becomes available or process unit operations are changed, this determination may become void and a new determination may be necessary. If you have any

**Enclosure**  
**Comparison of 40 CFR Subparts NNN and RRR**  
**For**  
**Flares and Boilers/Process Heaters**

The performance standards of §60.662 (Subpart NNN) and §60.702 (Subpart RRR) are established to minimize the emissions of volatile organic compounds (VOC) through the application of best demonstrated technology (BDT). Therefore, different technology controls have different testing, monitoring, and reporting requirements.

When a flare is used to seek compliance with either §60.662(b) or §60.702(b), both Subparts NNN and RRR require that the flare meet the requirements of §60.18 (see same requirement under testing at §60.664(d) and §60.704(c)). Monitoring requirements are similar, except Subpart RRR includes monitoring flow diverted *from the flare to the atmosphere* via a bypass line (see §60.703 (b)(2)) while Subpart NNN requirements include monitoring vent streams *routed to each flare* prior to being combined with other gases (see §60.662 (b)(2)). Therefore, Subpart RRR requires recording the flow rate more frequently (every 15 minutes) than Subpart NNN (every hour).

When a boiler or process heater is used to seek compliance with §60.662(a) and §60.702(a), the testing, monitoring, and recordkeeping requirements differ between Subparts NNN and RRR. EPA's rationale for waiving performance testing, temperature monitoring, and for refining the location and monitoring of flow indicators can be found on pages 45957 through 45959 in the Federal Register preamble to NSPS Subpart RRR (58 FR 45948 August 31, 1993). In general, Subpart RRR provides consideration of vent gases that are mixed with other gaseous streams and used as a *primary fuel* for the boiler(s) or process heater(s) whereas Subpart NNN does not address such primary fuel systems. Also, Subpart RRR addresses vent gas flows diverted *away from* a boiler(s) or process heater(s) via a bypass line(s) to the atmosphere whereas Subpart NNN merely addresses vent gases as *routed to* boilers or process heaters. For this reason, Subpart RRR requires recording the flow rate more frequently (every 15 minutes) in comparison to Subpart NNN (every hour). Specific citation comparisons are relevant as follows:

Specific to testing, both Subpart NNN §60.664(b)(5) and Subpart RRR §60.704(b)(5) waive the initial performance test requirement when a boiler or process heater with a design heat input capacity of 150 MBtu/hour or greater is used to comply with §60.662(a) and 60.702(a), respectively. Subpart RRR §60.704(b)(5) also waives the requirement for an initial performance test when a vent stream is *introduced with the primary fuel* into a boiler or process heater, regardless of heat input capacity.

Specific to monitoring, both Subpart NNN §60.663(c) and Subpart RRR §60.703(c) outline requirements for locating and monitoring vent gas flow indicators as well as monitoring firebox temperature. However, Subpart RRR §60.703(c)(1)(ii) waives the need for a flow indicator where bypass line valves to the atmosphere are secured in a

closed position with a lock-and-key type configuration. Also, Subpart RRR §60.703(c)(2) exempts the temperature monitoring requirement for any vent stream *introduced with the primary fuel* into a boiler or process heater.

Since Subpart RRR provides some relief in testing and monitoring requirements in comparison to Subpart NNN, as discussed above, an additional reporting requirement was deemed necessary. In order to ensure that the affected vent streams are being routed to appropriate control devices, Subpart RRR §60.705(s) requires that the facility maintain on file a schematic diagram of the affected vent streams, collection system(s), fuel systems, control devices, and bypass systems as part of the initial report submitted in accordance with §60.705(b). This additional reporting requirement (not required in Subpart NNN) is further discussed in the Federal Register preamble referenced above.

Re: *Alternative Monitoring Plan Request*  
*40 CFR Part 60 Subpart NNN*

Dear Mr. Blevins:

The Western Refining Company, L.P. (Western) is submitting this request for an alternative monitoring plan (AMP) for New Source Performance Standards (NSPS) under 40 CFR Part 60, Subpart NNN (*Standards of Performance for Volatile Organic Compound (VOC) Emissions From Synthetic Organic Chemical Manufacturing Industry (SOCMI) Distillation Operations*). For NSPS NNN affected facilities at the El Paso Refinery, Western proposes to use the NSPS RRR monitoring, recordkeeping, and reporting requirements related specifically to use of boilers, process heaters, and flares for compliance with NSPS NNN.

## 1. BACKGROUND

Western owns and operates a petroleum refinery in El Paso, Texas (El Paso Refinery). Western operates numerous distillation units at the El Paso Refinery. Some distillation may be subject to the requirements of New Source Performance Standards (NSPS) under 40 CFR Part 60, Subpart NNN (*Standards of Performance for Volatile Organic Compound (VOC) Emissions From Synthetic Organic Chemical Manufacturing Industry (SOCMI) Distillation Operations*). The process vents from the distillation units are routed to the refinery fuel gas system and then combusted in the process heaters and boilers at the refinery. The refinery fuel gas system is also connected to the refinery flares, which act as emergency back-up control devices in the event the vent stream is diverted from the refinery fuel gas system. As a result, consistent with previous determinations made by the United States Environmental Protection Agency (EPA) for NSPS NNN affected facilities, Western proposes to use the NSPS RRR monitoring, recordkeeping, and reporting requirements related specifically to use of boilers, process heaters, and flares for compliance with NSPS NNN.

## 2. AFFECTED FACILITIES UNDER NSPS NNN

Western has developed a methodology for determining the affected facilities under NSPS NNN. In addition, it is Western's understanding that the distillation unit only includes the equipment where the distillation process occurs. Based on the determination method developed by Western, the following is a list of affected facilities under NSPS NNN:

Air.1.C.17.a.2

212 N. Clark Street, El Paso, Texas 79905 • 915 775-3300 • www.wnr.com

- At the Light Ends Recovery (LER) Unit: C-550 Debutanizer
- At the South Fluidized Catalytic Cracking (FCCU) Unit: F-1306 Debutanizer
- At the South Alky Units No. 1 and 2:
  - F-802 Depropanizer
  - F-801 Deisobutanizer
  - F-803 Debutanizer
- At the South Butamer Unit: F-7107 Stabilizer

### 3. ALTERNATIVE MONITORING PLAN FOR PROCESS HEATERS AND BOILERS

Under NSPS NNN, a flow indicator that provides a record of the vent stream flow to a boiler or process heaters at least once every hour for each affected facility or distillation unit is required per 40 CFR §60.663(c)(1). In addition, per 40 CFR §60.663(c)(2), a temperature monitoring device in the firebox with a continuous recorder is required for a vent stream that is combusted in a boiler or process heater with a design capacity of less than 150 MMBtu/hr.

As an alternative to the above monitoring provisions in NSPS NNN, Western is proposing to use the monitoring procedures in NSPS RRR. The proposed alternative procedures are found in 40 CFR §60.703(c). For boilers/process heaters monitoring, 40 CFR §60.703(c)(1) requires that a flow indicator be installed in order to provide a record of the periods when emissions are diverted from the boiler or process heater, except where the bypass line valve is secured in the closed position with a car-seal or a lock-and-key type configuration. Western is proposing to maintain car-seals on the bypass line valves at the affected facilities. Therefore, per 40 CFR §60.703(c)(1)(ii), a flow indicator is not required in this case.

It is Western's understanding that a vent stream discharging from a pressure relief valve (PRV) resulting from a startup, shutdown or malfunction event is not subject to NSPS NNN or NSPS RRR per the definition of a "vent stream" specified in 40 CFR §60.661 and 40 CFR §60.701, as well the General Provisions specified in 40 CFR §60.8(c). Therefore, it is Western's understanding that PRVs do not qualify as bypass line valves and are exempt from both NSPS NNN and RRR.

Also, 40 CFR §60.703(c)(2) requires the installation of combustion temperature monitoring equipment on boilers and process heaters that have a heat input capacity of less than 150 MMBtu/hr unless the vent stream is introduced with the primary fuel in the boiler or process heater. Since the vent streams from Western's distillation operations and reactor processes are introduced in the boilers or process heaters with the primary fuel (refinery fuel gas as well as natural gas), combustion temperature monitoring would not be required under the proposed alternative monitoring plan.

Pursuant to 40 CFR §60.13(i), and consistent with previous determinations made by the EPA for NSPS NNN affected facilities, Western hereby requests approval of monitoring provisions of NSPS RRR as an alternative to the monitoring provisions of NSPS NNN as described above for boilers/heaters. In addition, due to Western's proposal to maintain car-seals on the bypass lines valves at the affected facilities, no flow indicators will be required. Western is also requesting approval of the corresponding

recordkeeping and reporting requirements in 40 CFR §§60.705(d)(2), (1)(2) and (1)(7) of NSPS RRR in lieu of the recordkeeping and reporting provisions of NSPS NNN. Based on this request, the following NSPS NNN requirements will be replaced by NSPS RRR requirements and no longer apply to the Western El Paso Refinery:

- NSPS NNN monitoring provisions
  - 40 CFR §60.663(c)
  - 40 CFR §60.663(c)(1)
  - 40 CFR §60.663(c)(2)
- NSPS NNN recordkeeping provisions
  - 40 CFR §60.665(d)
- NSPS NNN reporting provisions
  - 40 CFR §60.665(1)(2)

Western is requesting to comply with the following requirements under NSPS RRR:

- NSPS RRR monitoring provisions
  - 40 CFR §60.703(c)
  - 40 CFR §60.703(c)(1)(ii)
- NSPS RRR monitoring and recordkeeping provisions
  - 40 CFR §60.703(c)(2) (for boilers and process heaters with a heat input capacity of less than 150 MMBtu/hr)
- NSPS RRR recordkeeping provisions
  - 40 CFR §60.705(d)(2)
  - 40 CFR §60.705(1)(2)
  - 40 CFR §60.705(1)(7)

#### 4. ALTERNATIVE MONITORING PLAN FOR FLARES

For NSPS NNN compliance using a flare, a flow indicator that provides a record of vent stream flow to the flare at least once every hour is required per 40 CFR §60.663(b). As an alternative to the flow monitoring provisions in NSPS NNN, Western is proposing to use the monitoring procedures in NSPS RRR. The proposed alternative procedures are found in 40 CFR §60.703(b). For flare monitoring, 40 CFR §60.703(b) requires a flow indicator that provides a record of vent stream flow diverted from being routed to the flare at least once every 15 minutes for each affected facility, except where the bypass line valve is secured in the closed position with a car-seal or a lock-and-key type configuration. Western proposes to maintain car-seals on the bypass line valves at the affected facilities. Therefore, per 40 CFR §60.703(b)(2)(ii), a flow indicator is not required in this case.

It is Western's understanding that a vent stream discharging from a pressure relief valve (PRV) resulting from a startup, shutdown or malfunction event is not subject to NSPS NNN or NSPS RRR per the definition of a "vent stream" specified in 40 CFR §60.661 and 40 CFR §60.701, as well the General Provisions specified in 40 CFR §60.8(c). Therefore, it is Western's understanding that PRVs do not qualify as bypass line valves and are exempt from both NSPS NNN and RRR.

Pursuant to 40 CFR §60.13(i), Western hereby requests approval of the monitoring provisions of NSPS RRR as an alternative to the monitoring provisions of NSPS NNN as described above for flares. In addition, due to Western's proposal to maintain car-seals on the bypass lines valves at the affected facilities, no flow indicators will be required. Western is also requesting approval of corresponding recordkeeping and reporting requirements in 40 CFR §§60.705 (d)(2), (l)(2) and (l)(7) of NSPS RRR in lieu of the recordkeeping and reporting provisions of NSPS NNN. Based on this request, the following NSPS NNN requirements will be replaced by NSPS RRR requirements and no longer apply to the Western El Paso Refinery:

- NSPS NNN monitoring provisions
  - 40 CFR §60.663(b)
  - 40 CFR §60.663(b)(1)
  - 40 CFR §60.663(b)(2)

## 5. PERFORMANCE TEST WAIVER REQUEST

Under NSPS NNN 40 CFR §60.664(a)-(c), an initial performance test is required when a boiler or process heater with a design heat input capacity of less than 44 MW (150 MMBtu/hr) is used for NSPS NNN compliance purposes. However, per 40 CFR §60.704(b)(5)(ii) in NSPS RRR, a performance test is waived for process vent streams introduced into boilers or process heaters with the primary fuel. As noted previously, the vent streams from Western's distillation operations are mixed with other hydrocarbon streams to form the primary fuel for the refinery's boilers and process heaters. Therefore, consistent with previous determinations made by the EPA for NSPS NNN affected facilities, and per 40 CFR §60.8(b), Western is requesting a performance test waiver for the boilers and process heaters where distillation process vent streams are introduced with the primary fuel.
