Dear Senator Gutierrez:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) initial issuance application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-98.688083,29.466704&level=13>.

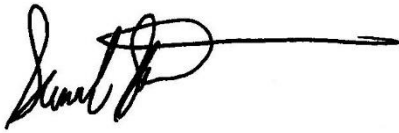

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

The Honorable Roland Gutierrez

**RE: TITLE V OPERATING PERMIT INITIAL APPLICATION
CYRUSONE LLC, SAT1 SITE
SAN ANTONIO, BEXAR COUNTY, TEXAS
TCEQ REGULATED ENTITY NUMBER: RN102414737
TCEQ CUSTOMER NUMBER: CN604843086**

Date July 21, 2025

Dear Sir/Madam:

On behalf of CyrusOne LLC ("CyrusOne"), Ramboll Americas Engineering Solutions, Inc. (Ramboll) is submitting the enclosed initial Title V Operating Permit (TVOP) application for their SAT1 Site, located at 9999 Westover Hills Blvd, San Antonio, Bexar County, Texas. Effective July 22, 2024, the Bexar County area was re-classified as serious nonattainment for the 2015 8-hour ozone standard. As a result, the Title V major source threshold for oxides of nitrogen (NO_x) and volatile organic compounds (VOC) decreased to 50 tons per year (tpy). CyrusOne is permitted to emit 89.82 tpy of NO_x. As such, the site has been grandfathered in as an existing Title V major source and is therefore submitting this initial Title V application as required. CyrusOne is meeting the requirements for a timely application set forth in 30 TAC §122.130 by submitting this application prior to July 22, 2025 (i.e., no later than 12 months after an action by the Environmental Protection Agency (EPA) was announced).

PROCESS DESCRIPTION

PROCESS DESCRIPTION

CyrusOne owns and operates the SAT1 data center ("the site" or "the facility"), located at 9999 Westover Hills Blvd, San Antonio, Bexar County, Texas. The facility includes the use of emergency generators to provide backup electricity for the facility's operations in the event of an emergency or power loss from the utility provider. The units also operate periodically to perform maintenance and readiness testing checks and to meet the federal New Source Performance Standards (NSPS) subpart IIII requirements. Each emergency generator has an associated diesel belly tank. Process flow diagrams for operation of the generators and belly tanks are presented in an earlier portion of this attachment (Figures 3 and 4).

By submitting this application, CyrusOne is establishing SAT1 as a Title V major source due to the change in National Ambient Air Quality Standards (NAAQS) nonattainment status. The site's operations will ensure that VOC and all other criteria pollutants will remain below the Title V major source thresholds. Bexar County is in attainment for CO, PM, and SO₂.

There are no stationary combustion sources at the site other than the emergency backup generators. The only other stationary sources of VOC or particulate emissions will be the facility's diesel belly tanks. A list of the generator IDs associated with each engine is shown in **Table 1**.

Notes:

^a Engine size and number of each generator model was provided by CyrusOne facility contact. Model specific emission rates were obtained from manufacturer's documentation provided by MTU Onsite. Manufacturer's emission rates were used for operations at 100% standby load. PM-2.5 and PM-10 emission rates were conservatively assumed to equal PM. Where model specific emission limits were not available, AP-42 was used. Hours of operation per year were increased to add flexibility and remain below the Major Source threshold.

^b Diesel fuel properties are from AP-42 Section 3.4, "Large Stationary Diesel And All Stationary Dual-fuel Engines."

^c Emission factors are from Table 3.4-1 from AP-42 Section 3.4, "Large Stationary Diesel And All Stationary Dual-fuel Engines" for engines greater than 600 hp. Conservatively assumed no NOx controls. Assumed Low Sulfur Diesel (LSD) is used with sulfur content of 500 ppm (0,05%). Assumed 100% conversion of carbon in fuel to CO₂ with 87 weight % carbon in diesel. N₂O and CH₄ emissions were assumed to be negligible with regard to permitting applicability analysis, and were not calculated.

^d Emission factors are from Table 3.4-2 from AP-42 Section 3.4, "Large Stationary Diesel And All Stationary Dual-fuel Engines" for engines greater than 600 hp for "Particulate and Particle-sizing Emission Factors for Large Uncontrolled Stationary Diesel Engines." PM-2,5 emission rates were conservatively assumed to equal PM-10.

ENG1-SAI	106.511	155674	CyrusOne established a federally enforceable limit of 89.82 tpy NO _x on an aggregate, 12-month rolling basis for these emergency generators. With the proposed NO _x limitation, emissions of CO, VOC, and PM (filterable)/PM ₁₀ /PM _{2.5} , SO ₂ and HAPs will inherently be limited to below PBR and Major Source thresholds. CyrusOne will maintain on-site records of the monthly 12-month rolling total of NO _x emissions from all generators. Additionally, no individual generator will operate for more than 10% of the normal annual operating schedule for the data center, or 876 hours annually, as required by the PBR in §106.511.
