Dear Senator Menendez:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) initial issuance application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-98.7675,29.891111&level=13>.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

The Honorable Jose Menendez

Public Involvement Plan Form for Permit and Registration Applications

The Public Involvement Plan is intended to provide applicants and the agency with information about how public outreach will be accomplished for certain types of applications in certain geographical areas of the state. It is intended to apply to new activities; major changes at existing plants, facilities, and processes; and to activities which are likely to have significant interest from the public. This preliminary screening is designed to identify applications that will benefit from an initial assessment of the need for enhanced public outreach.

All applicable sections of this form should be completed and submitted with the permit or registration application. For instructions on how to complete this form, see TCEQ-20960-inst.

Section 1. Preliminary Screening

- ☒ New Permit or Registration Application
☐ New Activity - modification, registration, amendment, facility, etc. (see instructions)

If neither of the above boxes are checked, completion of the form is not required and does not need to be submitted.

Section 2. Secondary Screening

- ☒ Requires public notice,
☐ Considered to have significant public interest, and
☒ Located within any of the following geographical locations:

- Austin
- Dallas
- Fort Worth
- Houston
- San Antonio
- West Texas
- Texas Panhandle
- Along the Texas/Mexico Border
- Other geographical locations should be decided on a case-by-case basis

**If all the above boxes are not checked, a Public Involvement Plan is not necessary.
Stop after Section 2 and submit the form.**

- ☒ Public Involvement Plan not applicable to this application. Provide **brief** explanation.

Facility is not considered to have significant public interest. No modifications are being made to the site. The site is newly subject to Title V permitting as a result of an action by the executive director to designate Bexar County as nonattainment for Ozone.

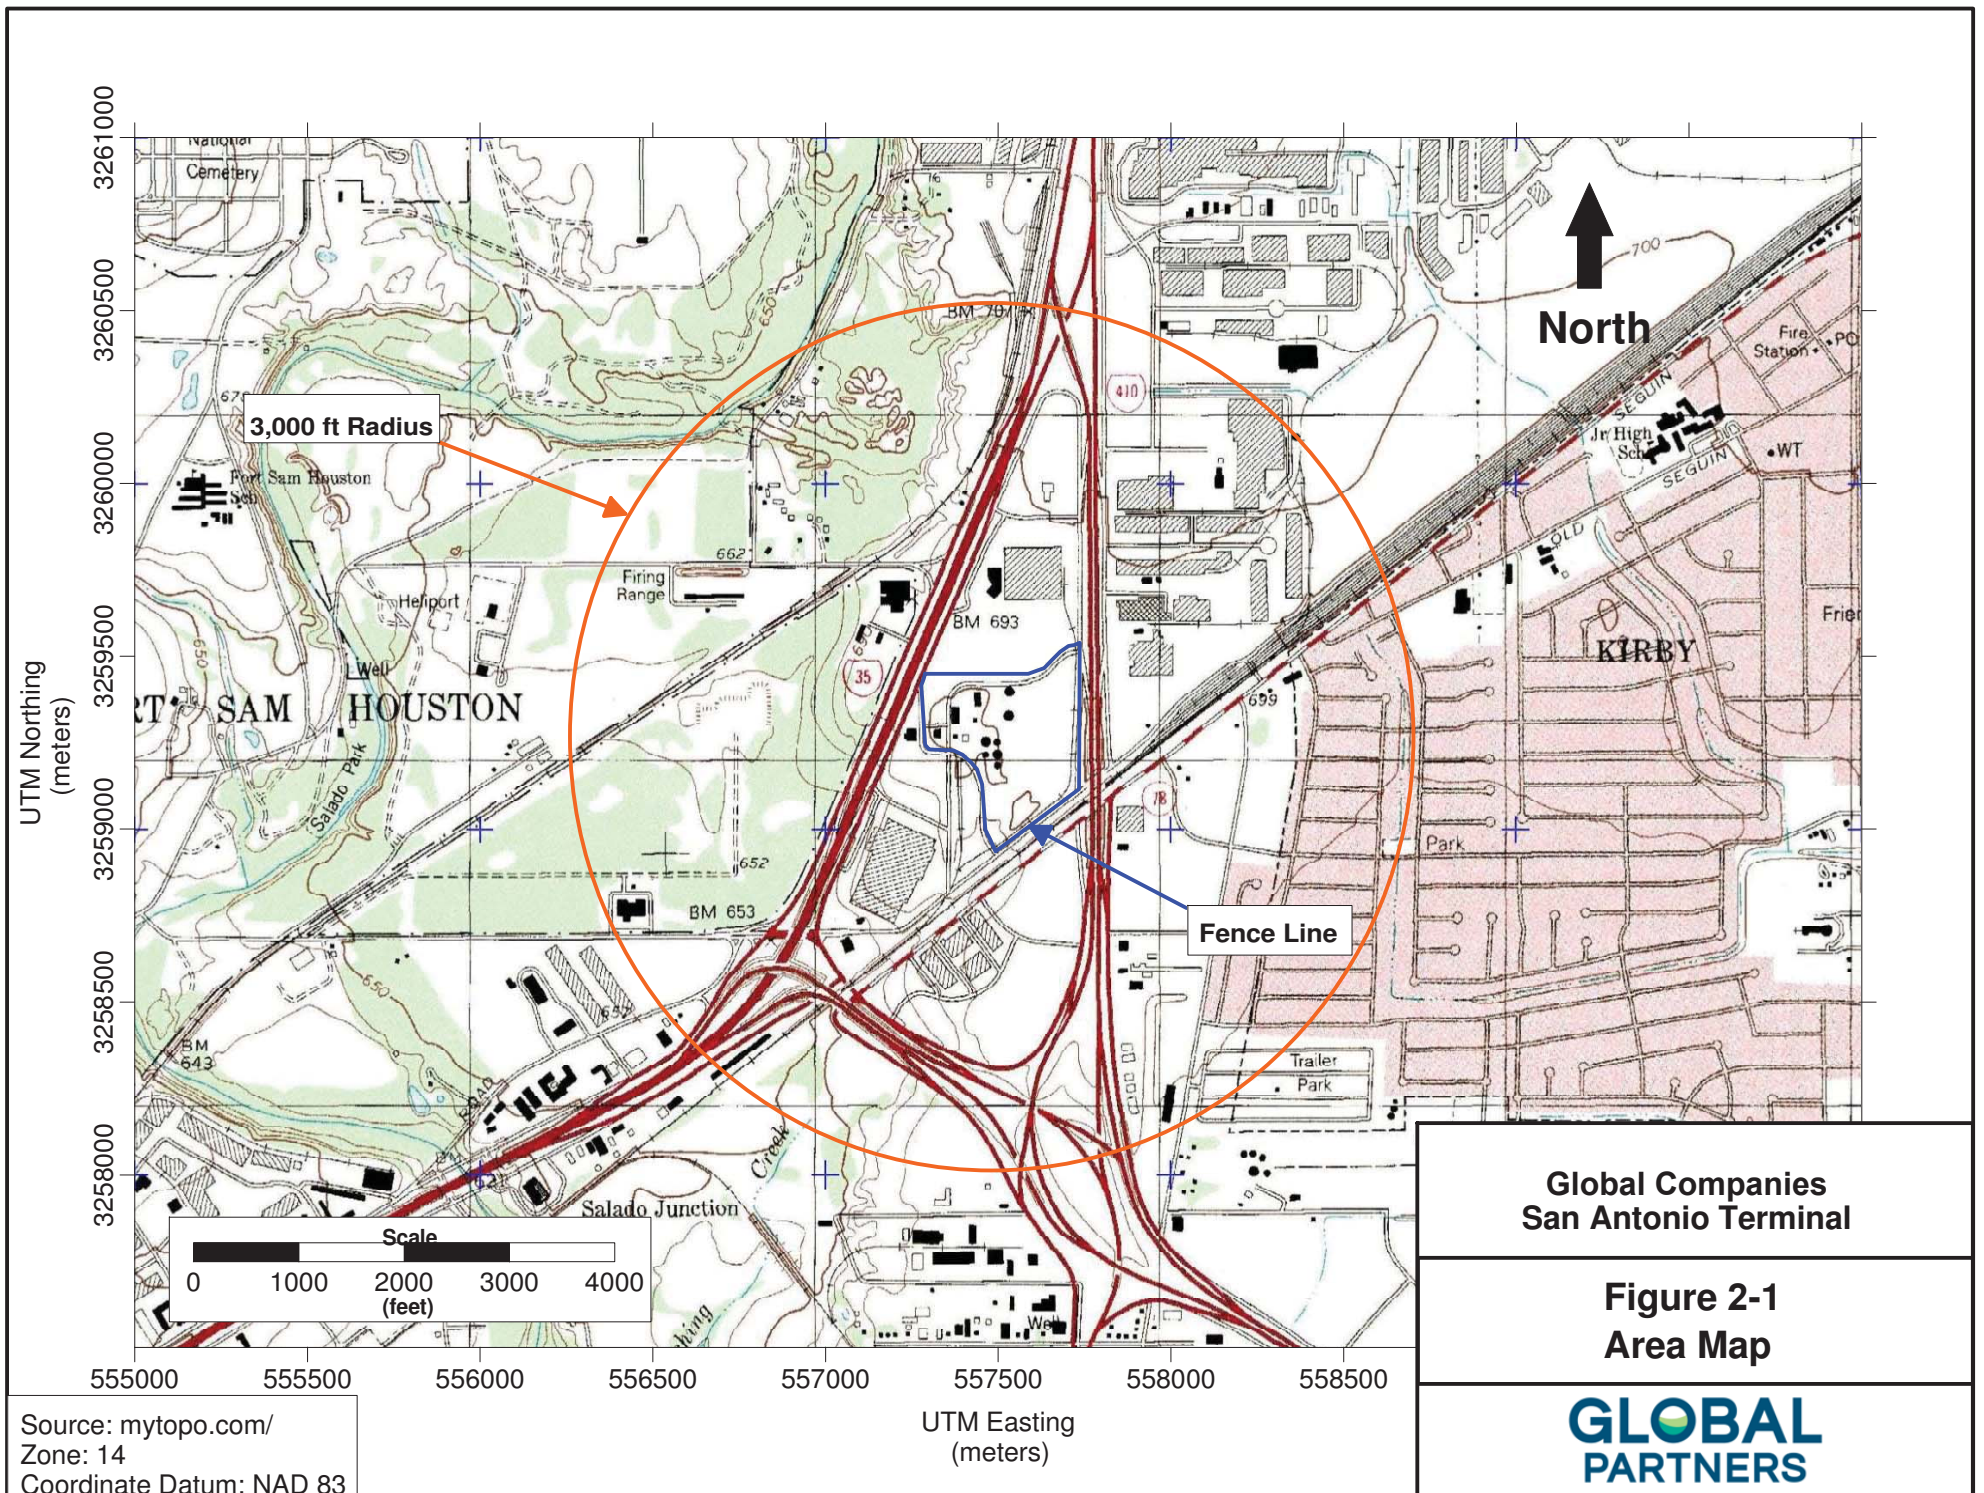

3. PROCESS DESCRIPTION

The San Antonio Terminal receives, stores, and distributes diesel, various grades of gasoline, renewable fuels, and additives, including ethanol. Products are supplied to the terminal by pipeline and tank truck. Denatured ethanol is also received by tank truck. Denatured ethanol is blended with gasoline to create the final gasoline product.

Products and additives are stored in above ground storage tanks. All floating roof tanks are authorized to store gasoline, diesel, and ethanol. Diesel is also stored in fixed roof tank T-31516. Gasoline and diesel additives (other than ethanol) are stored in fixed roof tanks. Fuel additives are all transported to the terminal by tank truck. Storage tank T-0003 is used to store storm water. Another tank, EPN SPCC, is used to collect wastewater streams from rainwater runoff and housekeeping.

Products are distributed through one truck loading rack, EPN F-LL1. Additives from the additive storage tanks are mixed into the product streams. Ethanol is added to gasoline from floating roof tanks. Butane is stored on site and butane injection may also occur at the loading rack. All loading operations utilize bottom (submerged) loading and vapor collection at the top of the truck. Vapors generated during loading are routed through a vapor collection header system and knockout tank to the vapor recovery unit (VRU) or a John Zink enclosed vapor combustion unit (VCU) as a backup to the VRU.. The VCU, EPN ST-LL1, is interlocked with the loading racks and uses electronic ignition to ignite displaced vapors upon detection of loading operations. The VRU, EPN VRU, is a carbon bed adsorption system. The VCU and VRU may operate simultaneously or independently. Recovered liquids are routed back to the product storage tanks. Gasoline loading vapors are controlled to 10 mg/L of gasoline loaded.
