THE HONORABLE BRYAN HUGHES
TEXAS SENATE
PO BOX 12068
AUSTIN TX 78711-2068

Re: Accepted Federal Operating Permit Significant Revision Application
Project Number: 38728
Permit Number: O1585
West Fraser Wood Products

Regulated Entity Number: RN102248606
Customer Reference Number: CN604734327

Dear Senator Hughes:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) significant revision application for a site located in your district. This application is being processed in an expedited manner, as allowed by the commission's rules in 30 Texas Administrative Code, Chapter 101, Subchapter J. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-94.385,33.465833&level=13>.

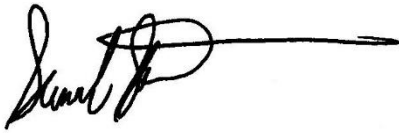

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

The Honorable Bryan Hughes

Dear APIRT,

West Fraser Wood Products (West Fraser)) owns and operates a lumber mill located at Hwy 82 E, New Boston, Bowie County, Texas (New Boston Mill). Bowie County is currently classified as an attainment or unclassified area for all criteria pollutants. West Fraser has been assigned to the Texas Commission on Environmental Quality (TCEQ) Customer Number (CN) 604734327. The New Boston Mill has been assigned TCEQ Regulated Entity Number (RN) 102248606. The New Boston Mill is authorized under New Source Review (NSR) Permit No. 7286.

With the revisions made to NSR Permit No. 7286, West Fraser is submitting this revision application to operate the new sources under Site Operating Permit (SOP) No. O-1585 per Title 30 of the Texas Administrative Code Section (§) 122.201. The New Boston Mill SOP revision is being submitted prior to the operation of the new source which they expect to begin in early 2024. The enclosed SOP revision application for the New Boston Mill consists of the following sections:

- ▶ Section 1: Executive Summary;
- ▶ Section 2: Process Description;
- ▶ Section 3: Plot Plan;
- ▶ Section 4: Area Map;
- ▶ Section 5: Process Flow Diagram; and
- ▶ Section 6: Applicable Forms.

Additionally, West Fraser is requesting to expedite review of this permit application. An expedited permitting fee of \$10,000 has been paid, with a copies of the appropriate forms (APD-EXP and APD-APS) enclosed in Section 6 of the application.

1. EXECUTIVE SUMMARY

West Fraser Wood Products (West Fraser) owns and operates a lumber mill located at Hwy 82 E, New Boston, Bowie County, Texas (New Boston Mill). The New Boston Mill produces dimensional southern yellow pine (SYP) lumber and is categorized under North American Industrial Classification System (NAICS) code 32113 for sawmills. The New Boston Mill has been authorized under the Texas Commission on Environmental Quality (TCEQ) Title V Permit No. O-1585. West Fraser has been assigned TCEQ Customer Reference No. CN604734327; the New Boston Mill has been assigned TCEQ Regulated Entity Number No. RN102248606.

West Fraser is requesting the following revisions to Title V Permit No. O-1585. New Source Review (NSR) Permit No. 7286 has been revised since the previous Title V Permit No. O-1585 renewal submission. The project for which these permits pertain to commenced in 2024 and is scheduled for completion in Q42025.

The revisions addressed in the recent NSR permitting action includes the following:

- ▶ Update the representation of the third continuous kiln from direct-fired to steam-heated and change the Emission Point Number (EPN) from DFKILN-3 to CKILN-3;
- ▶ Authorize a second green sawdust fired boiler (EPN BOILER-2), rated at 48.26 million Btu per hour (MMBtu/hr) heat input in conjunction with updating the representation of the third continuous kiln to a steam-heated kiln. PM emissions from the boiler will be controlled with an electrostatic precipitator (ESP). The boiler will be subject to 40 CFR Part 60 Subpart Db (NSPS Subpart Db) and 40 CFR Part 63, Subpart DDDDD (Boiler MACT) regulation as an existing hybrid suspension grate (HSG) unit;
- ▶ Authorize the green fuel conveyance system, including two new cyclones (EPNs C-1 and C-2) for EPN BOILER-2

Additionally, West Fraser is requesting to expedite review of this permit application; therefore, TCEQ Form APD-EXP form is included in Section 6 of this application. An expedited permitting fee of \$10,000 has been paid, with a copy of the surcharge payment form (TCEQ Form APD-APS) being enclosed in Section 6.

2. PROCESS DESCRIPTION

The lumber manufacturing process for southern yellow pine dimensional lumber generally falls under three principal processes described below.

2.1 Green End (Sawmill)

The green end (i.e., the Sawmill), which includes log delivery, off-loading and storage prior to being loaded onto the log deck infeed. Logs will be handled either by pellet wheel loaders. Some logs will be stored on a wet deck that prevents logs from rotting and serves as a backup log supply when logs cannot be harvested from surrounding tree plantations due to wet weather. Logs loaded onto the log deck are moved with a chain conveyor to a cutoff saw where the butt end of the logs are removed if necessary. The cutoff piece of the log is referred to as a lillypad. The lillypad pieces are routed to a chipper along with any smaller reject logs and the material will be routed to a vibrating screen conveyor separating chips and sawdust. Full length logs are sent through a high-speed ring debarker where bark is removed. Bark drops through a feed chute to a vibrating conveyor and is routed to a bark hog. The hogged bark is mechanically conveyed to the bark fuel silo. After the debarker, logs are scanned and processed through the primary log breakdown where the logs are cut to various lengths. After primary log breakdown, the logs are sent through a series of log scanners, chippers and saws creating a squared edge that is then routed to a horizontal or vertical arbor gang saw which cuts the cant into rough green lumber by various widths. Irregular sideboards cut from cants are sent to an edger where additional lumber is made. The entire sawmill process manufactures rough green lumber of various lengths (8 ft. to 20 ft.), widths (4 in.), and thicknesses (2x).

The wood residuals from the green end process are bark, green sawdust and green chips. Bark and sawdust will be used for fuel to feed the two biomass boiler energy systems. All of the bark and sawdust will be mechanically conveyed to the point where it is fed into the energy system. Chips and sawdust are separated with a shaker screen and chips are routed to truck bins, where they will be loaded onto tractor-trailer trucks and shipped to local paper mills. In the event, trucks are not available to empty the chip bins, chips will be dropped to an overflow chip pad and loaded onto the trucks with a large front-end loader.

Green lumber is then routed to a landing table and lug loader where the lumber is scanned and indexed according to size. Some end pieces are cutoff at the green trimmer prior to being sorted in a 49-bin sorter. These pieces are sent to a chipper. Lumber is dropped from the bins and moved by conveyor to an automatic stick layer where 1-inch lumber sticks are added as spacers between each layer of lumber in a pack. This allows greater air flow for even drying.

With the exception of the log cutoff saw and bark hog, the entire process described above will be located in an enclosed pellet building with minimal fugitive dust being created. The bin sorter and stacker will be in separate open-sided buildings, but this equipment only involves handling boards and does not create emissions.

2.2 Lumber Drying and Energy System

The Lumber Drying and Energy System will include two original continuous kilns (CKILN-1 and CKILN-2). As a part of the 2019 Project, the existing kilns will be limited to 250 MMBF/yr production and a new continuous kiln will be added. The original kilns are heated through an already permitted boiler (BOILER-1) that produces 72,000 lb/hr of steam (96.0 MMBtu/hr) utilizing bark and sawdust as the fuel source. The new kiln (CKILN-3) will be indirectly fired with the addition of a new boiler (BOILER-2) and will have an annual

drying capacity of 125 MMBF/yr. The new boiler will be fueled by 45% wet wood and produce 48.23 MMBtu/hr. Both boilers utilize a minimal amount of propane (approximately 2 gallons) during startup.

2.3 Planer Lumber Finishing

Planer Lumber Finishing will begin when rough dried lumber is taken to the infeed of the existing planer building and the lumber sticks are removed at the tilt hoist unscrambler. Lumber is then fed to the high-speed planer machine which planes all four sides of each piece of lumber to specified final dimensions. Planed lumber is scanned and automatically graded by appearance and defects before entering the dry trimmer where end pieces are removed. These end pieces (planer blocks) are dropped through a chute to a vibrating conveyor where they are either stacked or fed to a bottom discharge hog to produce hog fuel as chunks.

Dry planer shavings (and dust) will be collected at various pick-up points at the planer machine and trimmer and pulled through an ultra-high efficiency (UHE) cyclone separator with a high-volume blower system. This system will also collect shavings exiting the dry trim hog. Shavings collected from the UHE cyclone will be blown via a low volume/high pressure blower system to a cyclone separator on top of or adjacent to an elevated shavings truck bin(s). Tractor-trailer trucks pull underneath the bin(s) where shavings are dropped into the trailers to be sold off-site. Shavings from the truck bin can also be routed directly to the boiler fuel silo to be used as fuel.
