Process Description

PROCESS DESCRIPTION

Power, Pipe, and Tank, LLC is applying for an initial site operating permit for their facility in Amarillo, Texas.

Fiberglass reinforced plastic parts, including pipes and tanks, are manufactured at this facility. In general, polyester resins (reinforced with fibrous glass in chopped and/or matt/woven roven form) comprise the bulk of the final product. A catalyst such as methyl ethyl ketone peroxide initiates a chain reaction with the styrene monomer in the resin (or gelcoat), causing polymerization. Other additives may be added to accelerate or slow down the reaction, or to act as inert fillers.

Resin and gelcoat materials, as well as acetone, are received in totes or 55 gallon drums. Catalysts and other additives are received in five gallon or smaller containers (or bags). Fiberglass products including tanks and pipes will be manufactured from these materials in open molding processes at the plant. Open molding processes will be utilized that employ nonatomized mechanical application ("spray" chop guns with fluid impingement tips) equipment to apply resin. Resin may be applied to rotating floor molds to create tank tops and bottoms, while rotating winders may be used as cylindrical molds to create pipes and tanks.

Production of other parts and finishing activities can also occur in the production area using either the chop guns or manual application of resin. Occasionally, gelcoat may be applied manually or with non-atomized mechanical application equipment to the outside surface of a product to create a colored finish. In addition to manual application of resin and gelcoat, finishing activities can include cutting, grinding and sanding of pieces in the final preparation steps.

Typical resins, gelcoats, additives and catalysts will be used in the process. In addition, a small amount of acetone and/or water-based cleaning material will be used for cleaning purposes.

August 12, 2025

THE HONORABLE KEVIN SPARKS TEXAS SENATE PO BOX 12068 AUSTIN TX 78711-2068

Re: Accepted Federal Operating Permit Initial Issuance Application

Regulated Entity Number: RN100216340 Customer Reference Number: CN604020461

Dear Senator Sparks:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) initial issuance application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to the application.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.
