STEP 3**Permit Requirements****Read the standard requirements.**

- (1) The designated representative of each affected source and each affected unit at the source shall:
 - ⓐ Submit a complete Acid Rain permit application (including a compliance plan) under 40 CFR part 72 in accordance with the deadlines specified in 40 CFR 72.30; and
 - ⓑ Submit in a timely manner any supplemental information that the permitting authority determines is necessary in order to review an Acid Rain permit application and issue or deny an Acid Rain permit;
- (2) The owners and operators of each affected source and each affected unit at the source shall:
 - ⓐ Operate the unit in compliance with a complete Acid Rain permit application or a superseding Acid Rain permit issued by the permitting authority; and
 - ⓑ Have an Acid Rain Permit.

Monitoring Requirements

- (1) The owners and operators and, to the extent applicable, designated representative of each affected source and each affected unit at the source shall comply with the monitoring requirements as provided in 40 CFR part 75.
- (2) The emissions measurements recorded and reported in accordance with 40 CFR part 75 shall be used to determine compliance by the source or unit, as appropriate, with the Acid Rain emissions limitations and emissions reduction requirements for sulfur dioxide and nitrogen oxides under the Acid Rain Program.
- (3) The requirements of 40 CFR part 75 shall not affect the responsibility of the owners and operators to monitor emissions of other pollutants or other emissions characteristics at the unit under other applicable requirements of the Act and other provisions of the operating permit for the source.

Sulfur Dioxide Requirements

- (1) The owners and operators of each source and each affected unit at the source shall:
 - ⓐ Hold allowances, as of the allowance transfer deadline, in the source's compliance account (after deductions under 40 CFR 73.34(c)), not less than the total annual emissions of sulfur dioxide for the previous calendar year from the affected units at the source; and
 - ⓑ Comply with the applicable Acid Rain emissions limitations for sulfur dioxide.
- (2) Each ton of sulfur dioxide emitted in excess of the Acid Rain emissions limitations for sulfur dioxide shall constitute a separate violation of the Act.

- (5) An allowance shall not be deducted in order to comply with the requirements under paragraph (1) of the sulfur dioxide requirements prior to the calendar year for which the allowance was allocated.
- (6) An allowance allocated by the Administrator under the Acid Rain Program is a limited authorization to emit sulfur dioxide in accordance with the Acid Rain Program. No provision of the Acid Rain Program, the Acid Rain permit application, the Acid Rain permit, or an exemption under 40 CFR 72.7 or 72.8 and no provision of law shall be construed to limit the authority of the United States to terminate or limit such authorization.

Instructions for the Acid Rain Program Permit Application

The Acid Rain Program requires the designated representative to submit an Acid Rain permit application for each source with an affected unit. A complete Certificate of Representation must be received by EPA before the permit application is submitted to the Title V permitting authority. A complete Acid Rain permit application, once submitted, is binding on the owners and operators of the affected source and is enforceable in the absence of a permit until the Title V permitting authority either issues a permit to the source or disapproves the application.

Please type or print. If assistance is needed, contact the Title V permitting authority.

STEP 1 A Plant Code is a 4- or 5-digit number assigned by the Department of Energy's (DOE) Energy Information Administration (EIA) to facilities that generate electricity. For older facilities, "Plant Code" is synonymous with "ORISPL" and "Facility" codes. If the facility generates electricity but no Plant Code has been assigned, or if there is uncertainty regarding what the Plant Code is, send an email to the EIA. The email address is EIA-860@eia.gov.

STEP 2 In column "a," identify each unit at the facility by providing the appropriate unit identification number, consistent with the identifiers used in the Certificate of Representation and with submissions made to DOE and/or EIA. Do not list duct burners. For new units without identification numbers, owners and operators must assign identifiers consistent with EIA and DOE requirements. Each Acid Rain Program submission that includes the unit identification number(s) (e.g., Acid Rain permit applications, monitoring plans, quarterly reports, etc.) should reference those unit identification numbers in exactly the same way that they are referenced on the Certificate of Representation.

Submission Deadlines

For new units, an initial Acid Rain permit application must be submitted to the Title V permitting authority 24 months before the date the unit commences operation. Acid Rain permit renewal applications must be submitted at least 6 months in advance of the expiration of the acid rain portion of a Title V permit, or such longer time as provided for under the Title V permitting authority's operating permits regulation.

Submission Instructions

Submit this form to the appropriate Title V permitting authority. If you have questions regarding this form, contact your local, State, or EPA Regional Acid Rain contact, or call EPA's Clean Air Markets Hotline at (202) 343-9620.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The public reporting and recordkeeping burden for this collection of information is estimated to be 8 hours per response. Send comments on the Agency's need for this information, the accuracy of the provided burden estimates and any suggested methods for minimizing respondent burden to the Regulatory Support Division Director, U.S. Environmental Protection Agency (2821T), 1200 Pennsylvania Ave., NW, Washington, D.C. 20460. Include the OMB control number in any correspondence. Do not send the completed form to this address.

Certificate of Representation

See instructions and 40 CFR 72.24, 97.416, 97.516, 97.616, 97.716, 97.816, and 97.916, or a comparable state regulation, as applicable. Instructions for the Certificate of Representation

NOTE: The Certificate of Representation information can be submitted online through the CAMD Business System (CBS), which can be accessed at <https://camd.epa.gov/CBS/login/auth>. See the Certificate of Representation section of the Help File in CBS for assistance. If you have questions about CBS, send an email to cbs-support@camdsupport.com.

You must have a user name and password to access CBS. You can obtain a user name and password if: (1) you are currently listed in the CAMD database as a designated representative or an agent for a designated representative, **AND** (2) CAMD has received and processed a hard copy of the Electronic Signature Agreement at <https://www.epa.gov/airmarkets/electronic-signature-agreement-form>. Once a person meets these criteria, he/she may contact one of the following persons to obtain a user name and password: Karen VanSickle at (202) 343-9220, or Craig Hillock at (202) 343-9105.

Please type or print. Submit a separate page 2 for each unit at the plant (source) subject to the Acid Rain Program (ARP), a Cross-State Air Pollution Rule (CSAPR) trading program, or the Texas SO₂ Trading Program (TXSO₂). Include units for which a Retired Unit Exemption notice has been submitted. Indicate the page order and total number of pages (e.g., 1 of 4, 2 of 4, etc.) in the upper right-hand corner of page 2. **A Certificate of Representation amending an earlier submission supersedes the earlier submission in its entirety and must therefore always be complete.** Submit one Certificate of Representation form with original signature(s). NO FIELDS SHOULD BE LEFT BLANK. For assistance, send an email to: cbs-support@camdsupport.com.

Note that because all emissions and monitoring plan data submitted (or resubmitted) through to EPA's Emissions Collection and Monitoring Plan System (ECMPS) for a unit for a given time period must be contained in one internally consistent datafile, the designated representative identified on this form is also the certifying official responsible for making submissions concerning the identified unit(s) where required by additional programs, including the Greenhouse Gas New Source Performance Standards program under 40 CFR part 60, subpart TTTT (NSPS4T), the Mercury and Air Toxics Standards program under 40 CFR part 63, subpart UUUUU (MATS), and state programs implementing the NO_x SIP Call under 40 CFR 51.121 (SIPNOX).

If the plant does not produce electricity and has not been assigned a plant identifier, contact Craig Hillock at hillock.craig@epa.gov.
- (ii) Enter the latitude and longitude representing the location of the plant. Note that coordinates **MUST** be submitted in decimal degree format; in this format minutes and seconds are represented as a decimal fraction of one degree. Therefore, coordinates containing degrees, minutes, and seconds must first be converted using the formula:

$$\text{decimal degrees} = \text{degrees} + (\text{minutes} / 60) + (\text{seconds} / 3600)$$

Example: 39 degrees, 15 minutes, 25 seconds = $39 + (15 / 60) + (25 / 3600) = 39.2569$ degrees

STEPS 2 & 3

The designated representative and the alternate designated representative must be individuals (i.e., natural persons). Enter the associated company name and address of the representative as it should appear on all correspondence. Most correspondence will be emailed. **Although not required, EPA strongly encourages owners and operators to designate an alternate designated representative to act on behalf of the designated representative.**

There may be only one designated representative and one alternate designated representative for a plant.

STEP 4

- (i) Complete one page for each unit subject to the ARP, CSAPR, or TXSO₂ programs, and indicate the program(s) that the unit is subject to. Also indicate if the unit is subject to the MATS, NSPS4T, and/or SIPNOX programs. Identify each unit at the plant by providing the appropriate unit identification number, consistent with the identifiers used in previously submitted Certificates of Representation (if applicable) and with submissions made to DOE and/or EIA. Do not list duct burners. For new units without identification numbers, owners and operators must assign identifiers consistent with EIA and DOE requirements. Each submission to EPA that includes the unit identification number(s) (e.g., monitoring plans and quarterly reports) should reference those unit identification numbers in exactly the same way that they are referenced on the Certificate of Representation. Do not identify units that are not subject to the above-listed programs but are part of a common monitoring configuration with a unit that is subject to any of these programs. To identify units in a common monitoring configuration that are not subject to any of these programs, call the CAMD Hotline at (202) 343-9620, and leave a message under the “Continuous Emissions Monitoring” submenu.
- (ii) Identify the type of unit using one of the following abbreviations:

<u>Boilers</u>		<u>Boilers</u>		<u>Turbines</u>	
AF	Arch-fired boiler	OB	Other boiler	CC	Combined cycle combustion turbine
BFB	Bubbling fluidized bed boiler	PFB	Pressurized fluidized bed boiler	CT	Simple cycle combustion turbine
C	Cyclone boiler	S	Stoker boiler	IGC	Integrated gasification combined cycle
CB	Cell burner boiler	T	Tangentially-fired boiler	<u>Other</u>	
CFB	Circulating fluidized bed boiler	WBF	Wet bottom wall-fired boiler		
DB	Dry bottom wall-fired boiler	WBT	Wet bottom turbo-fired boiler		
DTF	Dry bottom turbo-fired boiler	WVF	Wet bottom vertically-fired boiler		
DVF	Dry bottom vertically-fired boiler			ICE	Internal combustion engine
				KLN	Cement kiln
				PRH	Process heater

If there is uncertainty about how a unit should be characterized, contact Craig Hillock at hillock.craig@epa.gov or (202) 343-9105.

- (iii) Indicate the source category description that most accurately describes the purpose for which the unit is operated by entering one of the following terms. If none of these descriptions applies to your unit, contact Craig Hillock at hillock.craig@epa.gov or (202) 343-9105.
- Electricity generation
 - Useful thermal energy production (i.e., production of process heat and/or steam for uses other than electricity production)
 - Cogeneration (i.e., both electricity generation and useful thermal energy production through the sequential use of energy)
- (iv) Provide the primary North American Industrial Classification System (NAICS) code that most accurately describes the business type for which the unit is operated. If unknown, go to <https://www.census.gov/eos/www/naics> for guidance on how to determine the proper NAICS code for the unit.

- (v) Enter the date the unit began (or will begin) serving any generator producing electricity for sale, including test generation. Enter this date and check the "actual" box for any unit that has begun to serve a generator producing electricity for sale as of the date of submission of this form. (This information should be provided even if the unit does not currently serve a generator producing electricity for sale.) For any unit that will begin, but has not begun as of the date of submission of this form, to serve a generator producing electricity for sale, estimate the future date on which the unit will begin to produce electricity for sale and check the "projected" box. When the actual date is established, revise the form accordingly by entering the actual date and checking the "actual" box. Enter "NA" if the unit has not ever served, is not currently serving, and is not projected to serve, a generator that produces electricity for sale. If you have questions regarding this portion of the form, contact Craig Hillock at hillock.craig@epa.gov or (202) 343-9105.

- (vi) For a unit that, as of the date of submission of this form, serves one or more generators (whether or not the generator produces electricity for sale), enter the generator ID number(s) and the nameplate capacity (in MWe, rounded to the nearest tenth) of each generator served by the unit. A unit serves a generator if the unit produces, or is able to produce, steam, gas, or other heated medium for generating electricity at that generator. For combined cycle units, report separately the nameplate capacities of the generators associated with the combustion turbine and the steam turbine. Please ensure that the generator ID numbers entered are consistent with those reported to the EIA.

A nameplate capacity should be entered in the "Acid Rain" column for each generator served by a unit subject to the ARP, and a nameplate capacity should be entered in the "CSAPR / Texas SO₂ / Other" column for each generator served by a unit subject to any of the other programs indicated on the form (including units that are also subject to the ARP). The nameplate capacity entered in the "Acid Rain" column where a unit is listed in the National Allowance Database (NADB) should be the nameplate capacity as shown in the NADB. The nameplate capacity entered in the "Acid Rain" column where a unit is not listed in the NADB, and the nameplate capacity entered in the "CSAPR / Texas SO₂ / Other" column where a unit is subject to any programs other than the ARP, generally should be the higher of (i) the nameplate capacity as of the generator's initial installation or (ii) the nameplate capacity following physical changes that result in an increase in the maximum electrical generating output that the generator can produce on a steady-state basis when not restricted by seasonal or other deratings. To the extent consistent with the preceding sentences, use the nameplate capacity reported to EIA for each generator on Form EIA-860. Enter "NA" if, as of the date of submission of this form, the unit does not serve a generator.

For the full definitions of "nameplate capacity", see 40 CFR 72.2, 97.402, 97.502, 97.602, 97.702, 97.802, and 97.902, as applicable. The NADB is available at <https://www.epa.gov/airmarkets/clean-air-markets-allowance-markets#Allocated>. If you have questions regarding nameplate capacity or the NADB, contact Craig Hillock at hillock.craig@epa.gov or (202) 343-9105.

- (vii) Enter the company name of each owner and operator in the "Company Name" field. Indicate whether the company is the owner, operator, or both. For new units, if the operator of a unit has not yet been chosen, indicate that the owner is both the owner and operator and submit a revised form when the operator has been selected within 30 days of the effective date of the selection. EPA must be notified of changes to owners and operators within 30 days of the effective date of the change. You are strongly encouraged to use the CAMD Business System to provide updated information on owners and operators. See the Certificate of Representation tutorial on the CBS homepage for assistance.
- (viii) Indicate whether or not the unit is located in Indian country. "Indian country" generally includes all lands within any federal Indian reservation, all dependent Indian communities, and all Indian allotments for which the Indian titles have not been extinguished. For the full definition of "Indian country", see 18 U.S.C. § 1151.
- (ix) When identifying a unit at a plant for the first time, indicate whether or not the unit ever operated at another location. If the answer is "yes", EPA will contact the owners/operator for more information.

Entergy Texas Lewis Creek Plant (RN100226877)
Title V FOP Renewal Application
FOP Permit No. 068
Acct # MQ-0009-F

Dear Director:

On behalf of Entergy Texas, Inc., Entergy Services, LLC (collectively “Entergy”), hereby submits an application for renewal of the Federal Operating Permit (FOP) Number O68 under Title V of the Clean Air Act for the Lewis Creek Plant. Primary operations at the Lewis Creek Plant include natural gas fired boilers (EPNs B-1 and B-2).

Entergy submitted its previous FOP renewal application for the Lewis Creek Plant on June 25, 2020, and received its effective FOP from the Texas Commission on Environmental Quality (TCEQ) on July 20, 2022. The only changes represented in this permit application are the addition of four Permits By Rule.

This application is being submitted according to the timeline required for Title V FOP applications specified in 30 Texas Administrative Code (TAC) §122.133(2), and it contains the following information required by the FOP application procedures specified in 30 TAC §122.132:

- Process description and process flow diagram;
- Site location map and plot plan;
- General administrative forms OP-CRO1, OP-CRO2, OP-AR1, OP-1, OP-2, OP-ACPS, EPA Acid Rain Permit Form, and EPA’s Certificate of Representation; and
- Site-specific permit forms OP-SUMR, OP-REQ1, OP-REQ2, and OP-PBRSUP.

To the extent not included on the standard application forms listed above, Entergy requests that all currently authorized Permit Shields be continued and renewed.

Thank you for your attention to this matter. If you have any questions concerning the application, please contact Catherine Cheramie by phone at (337) 254-1320 or by email at ccheram@entergy.com.

Sincerely,

Process Description and Process Flow Diagram

Process Description

Entergy operates two 2,642 million British thermal units per hour (MMBtu/hr) [260 megawatts (MW)] grandfathered natural gas fired boilers (EPNs B1 and B2) at its Lewis Creek Plant. The boilers are fired by natural gas, which is supplied by pipeline. In each boiler, combustion air is pre-heated by an exhaust gas heat exchanger. The preheaters raise the incoming air temperature through indirect contact. A large diameter disk, constructed of porous metallic mesh, rotates through both the exhaust gas stream and the incoming air stream in the preheater of each boiler. By virtue of its thermal mass, heat is transferred from the exhaust gas to the incoming air. The increased air temperature improves the thermal efficiency of the boiler, thereby reducing the amount of fuel consumed per watt of electricity generated. After the preheater, the exhaust gases exit through the stack of each boiler. Exhaust gas velocity and temperature can vary depending on load, firing conditions, and ambient conditions. A simplified block flow diagram for the power generation plant is included in this application. The incoming air from the preheater is fed to the combustion zone, and fuel is introduced by sets of burners. Air is typically fed at about 15 percent excess (above stoichiometric ratio); however, this is varied in response to unit load, measured NO_x emission rate, and ambient conditions. The heat generated during fuel combustion vaporizes the treated boiler water flowing through an array of water tubes, which cover the combustion chamber inner walls. The steam created in the combustion chamber water tubes is routed through a series of tube bundles, which bridge the flue gas path. These bundles serve to recover additional heat from the combustion gases, and to superheat the steam. This high pressure, superheated steam, from each boiler, drives steam turbine, generator sets. After the steam flows through the turbine, it is condensed and recycled back to a feed water storage tank which supplies the boiler feed water pump. In the condenser, heat is removed from the turbine exhaust stream by circulating cooling water in an indirect contact heat exchanger. The circulating water carries this heat to a discharge point to the river for the release of excess heat to the atmosphere by evaporation and sensible cooling.

Sulfur Dioxide Requirements

- (1) The owners and operators of each source and each affected unit at the source shall:

Instructions for the Acid Rain Program Permit Application

The Acid Rain Program requires the designated representative to submit an Acid Rain permit application for each source with an affected unit. A complete Certificate of Representation must be received by EPA before the permit application is submitted to the Title V permitting authority. A complete Acid Rain permit application, once submitted, is binding on the owners and operators of the affected source and is enforceable in the absence of a permit until the Title V permitting authority either issues a permit to the source or disapproves the application.

Please type or print. If assistance is needed, contact the Title V permitting authority.

STEP 1 A Plant Code is a 4- or 5-digit number assigned by the Department of Energy's (DOE) Energy Information Administration (EIA) to facilities that generate electricity. For older facilities, "Plant Code" is synonymous with "ORISPL" and "Facility" codes. If the facility generates electricity but no Plant Code has been assigned, or if there is uncertainty regarding what the Plant Code is, send an email to the EIA. The email address is EIA-860@eia.gov.

STEP 2 In column "a," identify each unit at the facility by providing the appropriate unit identification number, consistent with the identifiers used in the Certificate of Representation and with submissions made to DOE and/or EIA. Do not list duct burners. For new units without identification numbers, owners and operators must assign identifiers consistent with EIA and DOE requirements. Each Acid Rain Program submission that includes the unit identification number(s) (e.g., Acid Rain permit applications, monitoring plans, quarterly reports, etc.) should reference those unit identification numbers in exactly the same way that they are referenced on the Certificate of Representation.

Submission Deadlines

For new units, an initial Acid Rain permit application must be submitted to the Title V permitting authority 24 months before the date the unit commences operation. Acid Rain permit renewal applications must be submitted at least 6 months in advance of the expiration of the acid rain portion of a Title V permit, or such longer time as provided for under the Title V permitting authority's operating permits regulation.

Submission Instructions

Submit this form to the appropriate Title V permitting authority. If you have questions regarding this form, contact your local, State, or EPA Regional Acid Rain contact, or call EPA's Clean Air Markets Hotline at (202) 343-9620.

Instructions for the Certificate of Representation

NOTE: The Certificate of Representation information can be submitted online through the CAMD Business System (CBS), which can be accessed at <https://camd.epa.gov/CBS/login/auth>. See the Certificate of Representation section of the Help File in CBS for assistance. If you have questions about CBS, send an email to cbs-support@camdsupport.com.

You must have a user name and password to access CBS. You can obtain a user name and password if: (1) you are currently listed in the CAMD database as a designated representative or an agent for a designated representative, **AND** (2) CAMD has received and processed a hard copy of the Electronic Signature Agreement at <https://www.epa.gov/airmarkets/electronic-signature-agreement-form>. Once a person meets these criteria, he/she may contact one of the following persons to obtain a user name and password: Karen VanSickle at (202) 343-9220, or Craig Hillock at (202) 343-9105.

Please type or print. Submit a separate page 2 for each unit at the plant (source) subject to the Acid Rain Program (ARP), a Cross-State Air Pollution Rule (CSAPR) trading program, or the Texas SO₂ Trading Program (TXSO₂). Include units for which a Retired Unit Exemption notice has been submitted. Indicate the page order and total number of pages (e.g., 1 of 4, 2 of 4, etc.) in the upper right-hand corner of page 2. **A Certificate of Representation amending an earlier submission supersedes the earlier submission in its entirety and must therefore always be complete.** Submit one Certificate of Representation form with original signature(s). NO FIELDS SHOULD BE LEFT BLANK. For assistance, send an email to: cbs-support@camdsupport.com.

Note that because all emissions and monitoring plan data submitted (or resubmitted) through to EPA's Emissions Collection and Monitoring Plan System (ECMPS) for a unit for a given time period must be contained in one internally consistent datafile, the designated representative identified on this form is also the certifying official responsible for making submissions concerning the identified unit(s) where required by additional programs, including the Greenhouse Gas New Source Performance Standards program under 40 CFR part 60, subpart TTTT (NSPS4T), the Mercury and Air Toxics Standards program under 40 CFR part 63, subpart UUUUU (MATS), and state programs implementing the NO_x SIP Call under 40 CFR 51.121 (SIPNOX).

STEP 1

- (i) A plant code is a number assigned by the Department of Energy's (DOE) Energy Information Administration (EIA) to plants that generate electricity. For older plants, "plant code" is synonymous with "ORISPL" and "facility" codes. If the plant generates electricity but no plant code has been assigned, or if there is uncertainty regarding what the plant code is, send an email to the EIA at EIA-860@eia.gov. For plants that do not produce electricity, use the plant identifier assigned by EPA (beginning with "88"). If the plant does not produce electricity and has not been assigned a plant identifier, contact Craig Hillock at hillock.craig@epa.gov.
- (ii) Enter the latitude and longitude representing the location of the plant. Note that coordinates **MUST** be submitted in decimal degree format; in this format minutes and seconds are represented as a decimal fraction of one degree. Therefore, coordinates containing degrees, minutes, and seconds must first be converted using the formula:

$$\text{decimal degrees} = \text{degrees} + (\text{minutes} / 60) + (\text{seconds} / 3600)$$

Example: 39 degrees, 15 minutes, 25 seconds = $39 + (15 / 60) + (25 / 3600) = 39.2569$ degrees

STEPS 2 & 3

The designated representative and the alternate designated representative must be individuals (i.e., natural persons). Enter the associated company name and address of the representative as it should appear on all correspondence. Most correspondence will be emailed. **Although not required, EPA strongly encourages owners and operators to designate an alternate designated representative to act on behalf of the designated representative.**

There may be only one designated representative and one alternate designated representative for a plant.

STEP 4

- (i) Complete one page for each unit subject to the ARP, CSAPR, or TXSO₂ programs, and indicate the program(s) that the unit is subject to. Also indicate if the unit is subject to the MATS, NSPS4T, and/or SIPNOX programs. Identify each unit at the plant by providing the appropriate unit identification number, consistent with the identifiers used in previously submitted Certificates of Representation (if applicable) and with submissions made to DOE and/or EIA. Do not list duct burners. For new units without identification numbers, owners and operators must assign identifiers consistent with EIA and DOE requirements. Each submission to EPA that includes the unit identification number(s) (e.g., monitoring plans and quarterly reports) should reference those unit identification numbers in exactly the same way that they are referenced on the Certificate of Representation. Do not identify units that are not subject to the above-listed programs but are part of a common monitoring configuration with a unit that is subject to any of these programs. To identify units in a common monitoring configuration that are not subject to any of these programs, call the CAMD Hotline at (202) 343-9620, and leave a message under the “Continuous Emissions Monitoring” submenu.
- (ii) Identify the type of unit using one of the following abbreviations:

<u>Boilers</u>		<u>Boilers</u>		<u>Turbines</u>	
AF	Arch-fired boiler	OB	Other boiler	CC	Combined cycle combustion turbine
BFB	Bubbling fluidized bed boiler	PFB	Pressurized fluidized bed boiler	CT	Simple cycle combustion turbine
C	Cyclone boiler	S	Stoker boiler	IGC	Integrated gasification combined cycle
CB	Cell burner boiler	T	Tangentially-fired boiler	<u>Other</u>	
CFB	Circulating fluidized bed boiler	WBF	Wet bottom wall-fired boiler		
DB	Dry bottom wall-fired boiler	WBT	Wet bottom turbo-fired boiler		
DTF	Dry bottom turbo-fired boiler	WVF	Wet bottom vertically-fired boiler		
DVF	Dry bottom vertically-fired boiler			ICE	Internal combustion engine
				KLN	Cement kiln
				PRH	Process heater

If there is uncertainty about how a unit should be characterized, contact Craig Hillock at hillock.craig@epa.gov or (202) 343-9105.

- (iii) Indicate the source category description that most accurately describes the purpose for which the unit is operated by entering one of the following terms. If none of these descriptions applies to your unit, contact Craig Hillock at hillock.craig@epa.gov or (202) 343-9105.
- Electricity generation
 - Useful thermal energy production (i.e., production of process heat and/or steam for uses other than electricity production)
 - Cogeneration (i.e., both electricity generation and useful thermal energy production through the sequential use of energy)
- (iv) Provide the primary North American Industrial Classification System (NAICS) code that most accurately describes the business type for which the unit is operated. If unknown, go to <https://www.census.gov/eos/www/naics> for guidance on how to determine the proper NAICS code for the unit.

- (v) Enter the date the unit began (or will begin) serving any generator producing electricity for sale, including test generation. Enter this date and check the "actual" box for any unit that has begun to serve a generator producing electricity for sale as of the date of submission of this form. (This information should be provided even if the unit does not currently serve a generator producing electricity for sale.) For any unit that will begin, but has not begun as of the date of submission of this form, to serve a generator producing electricity for sale, estimate the future date on which the unit will begin to produce electricity for sale and check the "projected" box. When the actual date is established, revise the form accordingly by entering the actual date and checking the "actual" box. Enter "NA" if the unit has not ever served, is not currently serving, and is not projected to serve, a generator that produces electricity for sale. If you have questions regarding this portion of the form, contact Craig Hillock at hillock.craig@epa.gov or (202) 343-9105.

- (vi) For a unit that, as of the date of submission of this form, serves one or more generators (whether or not the generator produces electricity for sale), enter the generator ID number(s) and the nameplate capacity (in MWe, rounded to the nearest tenth) of each generator served by the unit. A unit serves a generator if the unit produces, or is able to produce, steam, gas, or other heated medium for generating electricity at that generator. For combined cycle units, report separately the nameplate capacities of the generators associated with the combustion turbine and the steam turbine. Please ensure that the generator ID numbers entered are consistent with those reported to the EIA.

A nameplate capacity should be entered in the "Acid Rain" column for each generator served by a unit subject to the ARP, and a nameplate capacity should be entered in the "CSAPR / Texas SO₂ / Other" column for each generator served by a unit subject to any of the other programs indicated on the form (including units that are also subject to the ARP). The nameplate capacity entered in the "Acid Rain" column where a unit is listed in the National Allowance Database (NADB) should be the nameplate capacity as shown in the NADB. The nameplate capacity entered in the "Acid Rain" column where a unit is not listed in the NADB, and the nameplate capacity entered in the "CSAPR / Texas SO₂ / Other" column where a unit is subject to any programs other than the ARP, generally should be the higher of (i) the nameplate capacity as of the generator's initial installation or (ii) the nameplate capacity following physical changes that result in an increase in the maximum electrical generating output that the generator can produce on a steady-state basis when not restricted by seasonal or other deratings. To the extent consistent with the preceding sentences, use the nameplate capacity reported to EIA for each generator on Form EIA-860. Enter "NA" if, as of the date of submission of this form, the unit does not serve a generator.

For the full definitions of "nameplate capacity", see 40 CFR 72.2, 97.402, 97.502, 97.602, 97.702, 97.802, and 97.902, as applicable. The NADB is available at <https://www.epa.gov/airmarkets/clean-air-markets-allowance-markets#Allocated>. If you have questions regarding nameplate capacity or the NADB, contact Craig Hillock at hillock.craig@epa.gov or (202) 343-9105.

- (vii) Enter the company name of each owner and operator in the "Company Name" field. Indicate whether the company is the owner, operator, or both. For new units, if the operator of a unit has not yet been chosen, indicate that the owner is both the owner and operator and submit a revised form when the operator has been selected within 30 days of the effective date of the selection. EPA must be notified of changes to owners and operators within 30 days of the effective date of the change. You are strongly encouraged to use the CAMD Business System to provide updated information on owners and operators. See the Certificate of Representation tutorial on the CBS homepage for assistance.
- (viii) Indicate whether or not the unit is located in Indian country. "Indian country" generally includes all lands within any federal Indian reservation, all dependent Indian communities, and all Indian allotments for which the Indian titles have not been extinguished. For the full definition of "Indian country", see 18 U.S.C. § 1151.
- (ix) When identifying a unit at a plant for the first time, indicate whether or not the unit ever operated at another location. If the answer is "yes", EPA will contact the owners/operator for more information.

Process Description

Entergy operates two 2,642 million British thermal units per hour (MMBtu/hr) [260 megawatts (MW)] grandfathered natural gas fired boilers (EPNs B1 and B2) at its Lewis Creek Plant. The boilers are fired by natural gas, which is supplied by pipeline. In each boiler, combustion air is pre-heated by an exhaust gas heat exchanger. The preheaters raise the incoming air temperature through indirect contact. A large diameter disk, constructed of porous metallic mesh, rotates through both the exhaust gas stream and the incoming air stream in the preheater of each boiler. By virtue of its thermal mass, heat is transferred from the exhaust gas to the incoming air. The increased air temperature improves the thermal efficiency of the boiler, thereby reducing the amount of fuel consumed per watt of electricity generated. After the preheater, the exhaust gases exit through the stack of each boiler. Exhaust gas velocity and temperature can vary depending on load, firing conditions, and ambient conditions. A simplified block flow diagram for the power generation plant is included in this application. The incoming air from the preheater is fed to the combustion zone, and fuel is introduced by sets of burners. Air is typically fed at about 15 percent excess (above stoichiometric ratio); however, this is varied in response to unit load, measured NO_x emission rate, and ambient conditions. The heat generated during fuel combustion vaporizes the treated boiler water flowing through an array of water tubes, which cover the combustion chamber inner walls. The steam created in the combustion chamber water tubes is routed through a series of tube bundles, which bridge the flue gas path. These bundles serve to recover additional heat from the combustion gases, and to superheat the steam. This high pressure, superheated steam, from each boiler, drives steam turbine, generator sets. After the steam flows through the turbine, it is condensed and recycled back to a feed water storage tank which supplies the boiler feed water pump. In the condenser, heat is removed from the turbine exhaust stream by circulating cooling water in an indirect contact heat exchanger. The circulating water carries this heat to a discharge point to the river for the release of excess heat to the atmosphere by evaporation and sensible cooling.

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Protecting Texas by Reducing and Preventing Pollution

September 3, 2025

THE HONORABLE BRANDON CREIGHTON
TEXAS SENATE
PO BOX 12068
AUSTIN TX 78711-2068

Re: Accepted Federal Operating Permit Renewal Application
Project Number: 38928
Permit Number: O68
Entergy Texas, Inc.
Lewis Creek Plant
Willis, Montgomery County
Regulated Entity Number: RN100226877
Customer Reference Number: CN603282054

Dear Senator Creighton:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) renewal application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-95.520555,30.435833&level=13>.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.
