TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Protecting Texas by Reducing and Preventing Pollution

THE HONORABLE BRYAN HUGHES
TEXAS SENATE

Dear Senator Hughes:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) renewal application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-94.866944,32.503888&level=13>.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

The Honorable Bryan Hughes

1.0 Introduction

JGE Gas Solutions LP (JGE) (CN604797068) is submitting a Federal Operating Permit (FOP) application for the Longview Gas Plant (Longview GP) (RN100237502) to renew and revise the Title V Site Operating Permit (SOP) Number (No.) O3097. The Longview GP is located in Gregg County, which is classified as an attainment county for all criteria pollutants.

Per Title 30 of the Texas Administrative Code (30 TAC) §122.133(2), the Longview GP is required to submit a permit renewal application at least six (6) months but no earlier than 18 months, prior to the March 17, 2026, expiration date of the existing SOP. Therefore, to avoid expiration of the existing permit and maintain compliance at the site, the SOP renewal application has been submitted before the renewal application deadline of September 17, 2025.

Section 2.0 contains a process description for the facility, Section 3.0 contains a summary of any requested revisions, and Section 4.0 contains all required Texas Commission on Environmental Quality (TCEQ) forms for the application.

1.3 Current Authorizations

Presently, emissions resulting from the site's operations are authorized by New Source Review (NSR) permit no. 23110 and multiple registered and unregistered Permit By Rule (PBR) authorizations. A detailed listing of these authorizations can be found at the end of the OP-REQ1 and OP-PBRSUP forms that are included in this application.

2.0 Process Description

The Longview Gas Plant is a natural gas processing plant with cryogenic separation and fractionation designed to purify and separate various components of natural gas. The raw natural gas entering the plant is treated with both triethylene glycol dehydration units for the removal of water as well as amine sweetening units to remove carbon dioxide (CO₂) and hydrogen sulfide (H₂S). Any inlet liquids, including oil and condensates are separated, stored, and trucked off site. Cryogenic separation then cools the gas by separating heavier hydrocarbons (like ethane, propane, butane, etc.) into natural gas liquids (NGLs). The remaining methane continues to sales as a pipeline quality natural gas. NGLs may then be sent for further fractionation into ethane, propane, and butanes/heavier compounds prior to distribution. NGLs and natural gasoline may be piped or trucked offsite. All amine system regeneration vent emissions are controlled with the site flare.

3.0 Revision Summary

Longview GP is requesting the following revisions to the SOP:

- Incorporate an alternative opacity periodic monitoring (PM) option for the combustion sources at the site to remove the special terms and conditions and revise the existing periodic monitoring requirement for quarterly opacity observations as required by 30 TAC §111.111(a)(1)(A) or 30 TAC §111.111(a)(1)(B). The PM option PM-P-030 allows only recording of the fuel type of the unit. If no alternative fuel, other than natural gas or field gas with less than ten (10) grains of sulfur is combusted in the units, no quarterly opacity observations are required. Delete the existing periodic monitoring for GRP-VENTS and add units to the GRP-VENTS grouping.
- Incorporate March 2024 PBR 178936 for the debutanizer project fugitive regulatory applicability.
- Incorporate January 2025 PBR unregistered for the heater treater replacement project.
- Incorporate July 2025 off permit change for installation of three (3) compressor engines.
- Remove all equipment no longer operating at the gas plant from the SOP.

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Protecting Texas by Reducing and Preventing Pollution

September 15, 2025

THE HONORABLE KEVIN SPARKS
TEXAS SENATE
PO BOX 12068
AUSTIN TX 78711-2068

Re: Accepted Federal Operating Permit Renewal Application
Project Number: 39007
Permit Number: O834
Targa Midstream Services LLC
Mertzon Gas Processing Plant
Mertzon, Irion County
Regulated Entity Number: RN100229467
Customer Reference Number: CN601301559

Dear Senator Sparks:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) renewal application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-100.907777,31.184166&level=13>.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

Dear Representative Darby:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) renewal application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-100.907777,31.184166&level=13>.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site.

This letter is being sent to you for information only and no action is required. If you need further information, please contact me at (512) 239-1250.

Sincerely,

A handwritten signature in black ink, appearing to read "Samuel Short", followed by a long horizontal line.
