Special Terms and Conditions:

Emission Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting

- 1. Permit holder shall comply with the following requirements:
 - A. Emission units (including groups and processes) in the Applicable Requirements Summary attachment shall meet the limitations, standards, equipment specifications, monitoring, recordkeeping, reporting, testing, and other requirements listed in the Applicable Requirements Summary attachment to assure compliance with the permit.
 - B. The textual description in the column titled "Textual Description" in the Applicable Requirements Summary attachment is not enforceable and is not deemed as a substitute for the actual regulatory language. The Textual Description is provided for information purposes only.
 - C. A citation listed on the Applicable Requirements Summary attachment, which has a notation [G] listed before it, shall include the referenced section and subsection for all commission rules, or paragraphs for all federal and state regulations and all subordinate paragraphs, subparagraphs and clauses, subclauses, and items contained within the referenced citation as applicable requirements.
 - D. When a grouped citation, notated with a [G] in the Applicable Requirements Summary, contains multiple compliance options, the permit holder must keep records of when each compliance option was used.

- E. Emission units subject to 40 CFR Part 63, Subpart ZZZZ as identified in the attached Applicable Requirements Summary table are subject to 30 TAC Chapter 113, Subchapter C, § 113.1090 which incorporates the 40 CFR Part 63 Subpart by reference.
- 2. The permit holder shall comply with the following sections of 30 TAC Chapter 101 (General Air Quality Rules):
 - A. Title 30 TAC § 101.1 (relating to Definitions), insofar as the terms defined in this section are used to define the terms used in other applicable requirements
 - B. Title 30 TAC § 101.3 (relating to Circumvention)
 - C. Title 30 TAC § 101.8 (relating to Sampling), if such action has been requested by the TCEQ

 - I. Title 30 TAC § 101.222 (relating to Demonstrations)
 - J. Title 30 TAC § 101.223 (relating to Actions to Reduce Excessive Emissions)
- 3. Permit holder shall comply with the following requirements of 30 TAC Chapter 111:
 - A. Visible emissions from stationary vents with a flow rate of less than 100,000 actual cubic feet per minute and constructed after January 31, 1972 that are not listed in the Applicable Requirements Summary attachment for 30 TAC Chapter 111, Subchapter A, Division 1, shall not exceed 20% opacity averaged over a six-minute period. The permit holder shall comply with the following requirements for stationary vents at the site subject to this standard:
 - (i) Title 30 TAC § 111.111(a)(1)(B) (relating to Requirements for Specified Sources)
 - (ii) Title 30 TAC § 111.111(a)(1)(E)
 - (iii) Title 30 TAC § 111.111(a)(1)(F)(i), (ii), (iii), or (iv)
 - (iv) For emission units with vent emissions subject to 30 TAC § 111.111(a)(1)(B), complying with 30 TAC § 111.111(a)(1)(F)(ii), (iii), or (iv), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146. These periodic monitoring requirements do not apply to vents that are not capable of producing visible emissions such as vents that emit only colorless VOCs; vents from non-fuming liquids; vents that provide passive

ventilation, such as plumbing vents; or vent emissions from any other source that does not obstruct the transmission of light. Vents, as specified in the "Applicable Requirements Summary" attachment, that are subject to the emission limitation of 30 TAC § 111.111(a)(1)(B) are not subject to the following periodic monitoring requirements:

- (1) An observation of stationary vents from emission units in operation shall be conducted at least once during each calendar quarter unless the emission unit is not operating for the entire quarter.
- (2) For stationary vents from a combustion source, if an alternative to the normally fired fuel is fired for a period greater than or equal to 24 consecutive hours, the permit holder shall conduct an observation of the stationary vent for each such period to determine if visible emissions are present. If such period is greater than 3 months, observations shall be conducted once during each quarter. Supplementing the normally fired fuel with natural gas or fuel gas to increase the net heating value to the minimum required value does not constitute creation of an alternative fuel
- (3) Records of all observations shall be maintained.
- (4) Visible emissions observations of emission units operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of emission units operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions observations shall be made during times when the activities described in 30 TAC § 111.111(a)(1)(E) are not taking place. Visible emissions shall be determined with each stationary vent in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each stationary vent during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.
- (5) Compliance Certification:
 - (a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(1) and (a)(1)(B).
 - (b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(1)(F) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity

requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

- (c) Some vents may be subject to multiple visible emission or monitoring requirements. All credible data must be considered when certifying compliance with this requirement even if the observation or monitoring was performed to demonstrate compliance with a different requirement.
- B. Certification of opacity readers determining opacities under Method 9 (as outlined in 40 CFR Part 60, Appendix A) to comply with opacity monitoring requirements shall be accomplished by completing the Visible Emissions Evaluators Course, or approved agency equivalent, no more than 180 days before the opacity reading.
- C. For emission units with contributions from uncombined water, the permit holder shall comply with the requirements of 30 TAC § 111.111(b).
- D. Emission limits on nonagricultural processes, except for the steam generators specified in 30 TAC § 111.153, shall comply with the following requirements:
 - (i) Emissions of PM from any source may not exceed the allowable rates as required in 30 TAC § 111.151(a) (relating to Allowable Emissions Limits)
 - (ii) Sources with an effective stack height (h_e) less than the standard effective stack height (H_e), must reduce the allowable emission level by multiplying it by $[h_e/H_e]^2$ as required in 30 TAC § 111.151(b)
 - (iii) Effective stack height shall be calculated by the equation specified in 30 TAC § 111.151(c)
- E. Outdoor burning, as stated in 30 TAC § 111.201, shall not be authorized unless the following requirements are satisfied:
 - (i) Title 30 TAC § 111.205 (relating to Exception for Fire Training)

 - (iii) Title 30 TAC § 111.209 (relating to Exception for Disposal Fires)
 - (iv) Title 30 TAC § 111.219 (relating to General Requirements for Allowable Outdoor Burning)
 - (v) Title 30 TAC § 111.221 (relating to Responsibility for Consequences of Outdoor Burning)
- 4. Permit holder shall comply with the following 30 TAC Chapter 115, Subchapter C requirements:

- A. When filling stationary gasoline storage containers with a nominal capacity less than or equal to 1,000 gallons at a Stage I motor vehicle fuel dispensing facility, the permit holder shall comply with the following requirements specified in 30 TAC Chapter 115, Subchapter C:
 - (i) Title 30 TAC § 115.222(3) (relating to Control Requirements), as it applies to liquid gasoline leaks, visible vapors, or significant odors
 - (ii) Title 30 TAC § 115.222(6) (relating to Control Requirements)
 - (iii) Title 30 TAC § 115.224(1) (relating to Inspection Requirements), as it applies to liquid gasoline leaks, visible vapors, or significant odors
- 5. The permit holder shall comply with the following requirements for units subject to any subpart of 40 CFR Part 60, unless otherwise stated in the applicable subpart:
 - A. Title 40 CFR § 60.7 (relating to Notification and Recordkeeping)
 - B. Title 40 CFR § 60.8 (relating to Performance Tests)
 - C. Title 40 CFR § 60.11 (relating to Compliance with Standards and Maintenance Requirements)

- 7. For each gasoline dispensing facility, with a throughput of less than 10,000 gallons per month as specified in 40 CFR Part 63, Subpart CCCCCC, the permit holder shall comply with the following requirements (Title 30 TAC, Subchapter C, § 113.1380 incorporated by reference):
 - A. Title 40 CFR § 63.11111(e), for records of monthly throughput
 - B. Title 40 CFR § 63.11111(i), for compliance due to increase of throughput
 - C. Title 40 CFR § 63.11113(c), for compliance due to increase of throughput

Additional Monitoring Requirements

8. The permit holder shall comply with the periodic monitoring requirements as specified in the attached "Periodic Monitoring Summary" upon issuance of the permit. Except for, as applicable, monitoring malfunctions, associated repairs, and required quality assurance or control activities (including, as applicable, calibration checks and required zero and span adjustments), the permit holder shall conduct all monitoring in continuous operation (or shall collect data at all required intervals) at all times that the pollutant-specific emissions unit is operating. The permit holder may elect to collect monitoring data on a more frequent basis and average the data, consistent with the averaging time or minimum frequency specified in the "Periodic Monitoring Summary," for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis. In no event shall data be collected and used in particular instances to avoid reporting deviations. Deviations shall be reported according to 30 TAC § 122.145 (Reporting Terms and Conditions).

- 19. For units (insert unit ID numbers for units subject to Acid Rain) (identified in the Certificate of Representation as units (insert EPA unit ID numbers)), located at the affected source identified by ORIS/Facility/Plant code (insert the ORIS/Facility/Plant ID), the designated representative and the owner or operator, as applicable, shall comply with the following Acid Rain Permit requirements.

A. General Requirements

- (i) Under 30 TAC § 122.12(1) and 40 CFR Part 72, the Acid Rain Permit requirements contained here are a separable portion of the Federal Operating Permit (FOP) and have an independent public comment process which may be separate from, or combined with the FOP.

- (iii) The owners and operators of the affected source shall operate the source and the unit in compliance with the requirements of this Acid Rain Permit and all other applicable State and federal requirements.
- (iv) The owners and operators of the affected source shall comply with the General Terms and Conditions of the FOP that incorporates this Acid Rain Permit.

(v) The term for the Acid Rain permit shall commence with the issuance of the FOP that incorporates the Acid Rain permit and shall be run concurrent with the remainder of the term of the FOP. Renewal of the Acid Rain permit shall coincide with the renewal of the FOP that incorporates the Acid Rain permit and subsequent terms shall be no more than five years from the date of renewal of the FOP and run concurrent with the permit term of the FOP.

- (2) The owners and operators shall hold the CSAPR NO_x Ozone Season Group 2 allowances required under paragraph C.(ii)(1) above, as of midnight of November 1 (if it is a business day), or midnight of the first business day thereafter (if November 1 is not a business day), immediately after such control period.
- (3) Total NO_x emissions from all CSAPR NO_x Ozone Season Group 2 units at CSAPR NO_x Ozone Season Group 2 sources in the state during a control period in a given year exceed the state assurance level if such total NO_x emissions exceed the sum, for such control period, of the state NO_x Ozone Season Group 2 trading budget under 40 CFR § 97.810(a) and the state's variability limit under 40 CFR § 97.810(b).
- (4) It shall not be a violation of 40 CFR Part 97, Subpart EEEEE or of the Clean Air Act if total NO_x emissions from all CSAPR NO_x Ozone Season Group 2 units at CSAPR NO_x Ozone Season Group 2 sources in the state during a control period exceed the state assurance level or if a common designated representative's share of total NO_x emissions from the CSAPR NO_x Ozone Season Group 2 units at CSAPR NO_x Ozone Season Group 2 sources in the state during a control period exceeds the common designated representative's assurance level.
- (5) To the extent the owners and operators fail to hold CSAPR NO_x Ozone Season Group 2 allowances for a control period in a given year in accordance with paragraphs C.(ii)(1) through (3) above,
 - (a) The owners and operators shall pay any fine, penalty, or assessment or comply with any other remedy imposed under the Clean Air Act; and
 - (b) Each CSAPR NO_x Ozone Season Group 2 allowance that the owners and operators fail to hold for such control period in accordance with paragraphs C.(ii)(1) through (3) above and each day of such control period shall constitute a separate violation of 40 CFR Part 97, Subpart EEEEE and the Clean Air Act.
- (iii) Compliance periods

- (1) A CSAPR NO_x Ozone Season Group 2 unit shall be subject to the requirements under paragraph C.(i) above for the control period starting on the later of May 1, 2017 or the deadline for meeting the unit's monitor certification requirements under 40 CFR § 97.830(b) and for each control period thereafter.
- (2) A CSAPR NO_x Ozone Season Group 2 unit shall be subject to the requirements under paragraph C.(ii) above for the control period starting on the later of May 1, 2017 or the deadline for meeting the unit's monitor certification requirements under 40 CFR § 97.830(b) and for each control period thereafter.
- (iv) Vintage of allowances held for compliance
 - (1) A CSAPR NO_x Ozone Season Group 2 allowance held for compliance with the requirements under paragraph C.(i)(1) above for a control period in a given year must be a CSAPR NO_x Ozone Season Group 2 allowance that was allocated for such control period or a control period in a prior year.
 - (2) A CSAPR NO_x Ozone Season Group 2 allowance held for compliance with the requirements under paragraphs C.(i)(2)(a) and (ii)(1) through (3) above for a control period in a given year must be a CSAPR NO_x Ozone Season Group 2 allowance that was allocated for a control period in a prior year or the control period in the given year or in the immediately following year.

 - (2) Notwithstanding any other provision of 40 CFR Part 97, Subpart EEEEE, the Administrator has the authority to terminate or limit the use and duration of such authorization to the extent the Administrator determines is necessary or appropriate to implement any provision of the Clean Air Act.
- (vii) Property right. A CSAPR NO_x Ozone Season Group 2 allowance does not constitute a property right.

D. FOP revision requirements

(i) No FOP revision shall be required for any allocation, holding, deduction, or transfer of CSAPR NO_x Ozone Season Group 2 allowances in accordance with 40 CFR Part 97, Subpart EEEEE.

(ii) This FOP incorporates the CSAPR emissions monitoring, recordkeeping and reporting requirements pursuant to 40 CFR §§ 97.830 through 97.835, and the requirements for a continuous emission monitoring system (pursuant to 40 CFR Part 75, subpart H), an excepted monitoring system (pursuant to 40 CFR Part 75, appendices D and E), a low mass emissions excepted monitoring methodology (pursuant to 40 CFR § 75.19), and an alternative monitoring system (pursuant to 40 CFR Part 75, subpart E). Periodic Monitoring Summary

Unit/Group/Process Information								
ID No.: GRP-STACK								
Control Device ID No.: N/A Control Device Type: N/A								
Applicable Regulatory Requirement								
Name: 30 TAC Chapter 111, Visible Emissions SOP Index No.: R1111								
Pollutant: Opacity Main Standard: § 111.111(a)(1)(C)								
Monitoring Information								
Indicator: Fuel Type								
Minimum Frequency: Annually or at any time an alternate f	uel is used							
Averaging Period: N/A								
Deviation Limit: Failure to record the type of fuel used by th	ne units.							

Periodic Monitoring Text: Record the type of fuel used by the unit. If an alternate fuel is fired, either alone or in combination with the specified gas, for a period greater than or equal to 24 consecutive hours it shall be considered and reported as a deviation or the permit holder shall conduct an observation of the stationary vent for each such period to determine if visible emissions are observed. Any time an alternate fuel is fired for a period of greater than 7 consecutive days then visible emissions observations will be conducted no less than once per week. Documentation of all observations shall be maintained. If visible emissions are present during the firing of an alternate fuel, the permit holder shall either list this occurrence as a deviation or the permit holder may determine the opacity consistent with Test Method 9. Any opacity readings that are above the opacity limit from the underlying applicable requirement shall be reported as a deviation.

The permit holder shall comply with all terms and conditions contained in 30 TAC § 122.143 (General Terms and Conditions), 30 TAC § 122.144 (Recordkeeping Terms and Conditions), 30 TAC § 122.145 (Reporting Terms and Conditions), and 30 TAC § 122.146 (Compliance Certification Terms and Conditions).

In accordance with 30 TAC § 122.144(1), records of required monitoring data and support information required by this permit, or any applicable requirement codified in this permit, are required to be maintained for a period of five years from the date of the monitoring report, sample, or application unless a longer data retention period is specified in an applicable requirement. The five year record retention period supersedes any less stringent retention requirement that may be specified in a condition of a permit identified in the New Source Review Authorization attachment.

If the permit holder chooses to demonstrate that this permit is no longer required, a written request to void this permit shall be submitted to the Texas Commission on Environmental Quality (TCEQ) by the Responsible Official in accordance with 30 TAC § 122.161(e). The permit holder shall comply with the permit's requirements, including compliance certification and deviation reporting, until notified by the TCEQ that this permit is voided.

The permit holder shall comply with 30 TAC Chapter 116 by obtaining a New Source Review authorization prior to new construction or modification of emission units located in the area covered by this permit.

All reports required by this permit must include in the submittal a cover letter which identifies the following information: company name, TCEQ regulated entity number, air account number (if assigned), site name, area name (if applicable), and Air Permits Division permit number(s).

Special Terms and Conditions:

Emission Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting

- 1. Permit holder shall comply with the following requirements:
 - A. Emission units (including groups and processes) in the Applicable Requirements Summary attachment shall meet the limitations, standards, equipment specifications, monitoring, recordkeeping, reporting, testing, and other requirements listed in the Applicable Requirements Summary attachment to assure compliance with the permit.
 - B. The textual description in the column titled "Textual Description" in the Applicable Requirements Summary attachment is not enforceable and is not deemed as a substitute for the actual regulatory language. The Textual Description is provided for information purposes only.
 - C. A citation listed on the Applicable Requirements Summary attachment, which has a notation [G] listed before it, shall include the referenced section and subsection for all commission rules, or paragraphs for all federal and state regulations and all subordinate paragraphs, subparagraphs and clauses, subclauses, and items contained within the referenced citation as applicable requirements.
 - D. When a grouped citation, notated with a [G] in the Applicable Requirements Summary, contains multiple compliance options, the permit holder must keep records of when each compliance option was used.

- E. Emission units subject to 40 CFR Part 63, Subpart ZZZZ as identified in the attached Applicable Requirements Summary table are subject to 30 TAC Chapter 113, Subchapter C, § 113.1090 which incorporates the 40 CFR Part 63 Subpart by reference.
- 2. The permit holder shall comply with the following sections of 30 TAC Chapter 101 (General Air Quality Rules):
 - A. Title 30 TAC § 101.1 (relating to Definitions), insofar as the terms defined in this section are used to define the terms used in other applicable requirements
 - B. Title 30 TAC § 101.3 (relating to Circumvention)
 - C. Title 30 TAC § 101.8 (relating to Sampling), if such action has been requested by the TCEQ
 - D. Title 30 TAC § 101.9 (relating to Sampling Ports), if such action has been requested by the TCEQ
 - E. Title 30 TAC § 101.10 (relating to Emissions Inventory Requirements)
 - F. Title 30 TAC § 101.201 (relating to Emission Event Reporting and Recordkeeping Requirements)
 - G. Title 30 TAC § 101.211 (relating to Scheduled Maintenance, Start-up, and Shutdown Reporting and Recordkeeping Requirements)

 - I. Title 30 TAC § 101.222 (relating to Demonstrations)
 - J. Title 30 TAC § 101.223 (relating to Actions to Reduce Excessive Emissions)
- 3. Permit holder shall comply with the following requirements of 30 TAC Chapter 111:
 - A. Visible emissions from stationary vents with a flow rate of less than 100,000 actual cubic feet per minute and constructed after January 31, 1972 that are not listed in the Applicable Requirements Summary attachment for 30 TAC Chapter 111, Subchapter A, Division 1, shall not exceed 20% opacity averaged over a six-minute period. The permit holder shall comply with the following requirements for stationary vents at the site subject to this standard:
 - (i) Title 30 TAC § 111.111(a)(1)(B) (relating to Requirements for Specified Sources)
 - (ii) Title 30 TAC § 111.111(a)(1)(E)
 - (iii) Title 30 TAC § 111.111(a)(1)(F)(i), (ii), (iii), or (iv)
 - (iv) For emission units with vent emissions subject to 30 TAC § 111.111(a)(1)(B), complying with 30 TAC § 111.111(a)(1)(F)(ii), (iii), or (iv), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146. These periodic monitoring requirements do not apply to vents that are not capable of producing visible emissions such as vents that emit only colorless VOCs; vents from non-fuming liquids; vents that provide passive

ventilation, such as plumbing vents; or vent emissions from any other source that does not obstruct the transmission of light. Vents, as specified in the "Applicable Requirements Summary" attachment, that are subject to the emission limitation of 30 TAC § 111.111(a)(1)(B) are not subject to the following periodic monitoring requirements:

- (1) An observation of stationary vents from emission units in operation shall be conducted at least once during each calendar quarter unless the emission unit is not operating for the entire quarter.
- (2) For stationary vents from a combustion source, if an alternative to the normally fired fuel is fired for a period greater than or equal to 24 consecutive hours, the permit holder shall conduct an observation of the stationary vent for each such period to determine if visible emissions are present. If such period is greater than 3 months, observations shall be conducted once during each quarter. Supplementing the normally fired fuel with natural gas or fuel gas to increase the net heating value to the minimum required value does not constitute creation of an alternative fuel
- (3) Records of all observations shall be maintained.
- (4) Visible emissions observations of emission units operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of emission units operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions observations shall be made during times when the activities described in 30 TAC § 111.111(a)(1)(E) are not taking place. Visible emissions shall be determined with each stationary vent in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each stationary vent during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.
- (5) Compliance Certification:
 - (a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(1) and (a)(1)(B).
 - (b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(1)(F) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity

requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

- (c) Some vents may be subject to multiple visible emission or monitoring requirements. All credible data must be considered when certifying compliance with this requirement even if the observation or monitoring was performed to demonstrate compliance with a different requirement.
- B. Certification of opacity readers determining opacities under Method 9 (as outlined in 40 CFR Part 60, Appendix A) to comply with opacity monitoring requirements shall be accomplished by completing the Visible Emissions Evaluators Course, or approved agency equivalent, no more than 180 days before the opacity reading.
- C. For emission units with contributions from uncombined water, the permit holder shall comply with the requirements of 30 TAC § 111.111(b).
- D. Emission limits on nonagricultural processes, except for the steam generators specified in 30 TAC § 111.153, shall comply with the following requirements:
 - (i) Emissions of PM from any source may not exceed the allowable rates as required in 30 TAC § 111.151(a) (relating to Allowable Emissions Limits)
 - (ii) Sources with an effective stack height (h_e) less than the standard effective stack height (H_e), must reduce the allowable emission level by multiplying it by $[h_e/H_e]^2$ as required in 30 TAC § 111.151(b)
 - (iii) Effective stack height shall be calculated by the equation specified in 30 TAC § 111.151(c)
- E. Outdoor burning, as stated in 30 TAC § 111.201, shall not be authorized unless the following requirements are satisfied:
 - (i) Title 30 TAC § 111.205 (relating to Exception for Fire Training)
 - (ii) Title 30 TAC § 111.207 (relating to Exception for Recreation, Ceremony, Cooking, and Warmth)

 - (iv) Title 30 TAC § 111.219 (relating to General Requirements for Allowable Outdoor Burning)
 - (v) Title 30 TAC § 111.221 (relating to Responsibility for Consequences of Outdoor Burning)
- 4. Permit holder shall comply with the following 30 TAC Chapter 115, Subchapter C requirements:

- A. When filling stationary gasoline storage containers with a nominal capacity less than or equal to 1,000 gallons at a Stage I motor vehicle fuel dispensing facility, the permit holder shall comply with the following requirements specified in 30 TAC Chapter 115, Subchapter C:
 - (i) Title 30 TAC § 115.222(3) (relating to Control Requirements), as it applies to liquid gasoline leaks, visible vapors, or significant odors
 - (ii) Title 30 TAC § 115.222(6) (relating to Control Requirements)
 - (iii) Title 30 TAC § 115.224(1) (relating to Inspection Requirements), as it applies to liquid gasoline leaks, visible vapors, or significant odors
- 5. The permit holder shall comply with the following requirements for units subject to any subpart of 40 CFR Part 60, unless otherwise stated in the applicable subpart:
 - A. Title 40 CFR § 60.7 (relating to Notification and Recordkeeping)
 - B. Title 40 CFR § 60.8 (relating to Performance Tests)

- 6. The permit holder shall comply with the requirements of 30 TAC Chapter 113, Subchapter C, § 113.100 for units subject to any subpart of 40 CFR Part 63, unless otherwise stated in the applicable subpart.
- 7. For each gasoline dispensing facility, with a throughput of less than 10,000 gallons per month as specified in 40 CFR Part 63, Subpart CCCCCC, the permit holder shall comply with the following requirements (Title 30 TAC, Subchapter C, § 113.1380 incorporated by reference):
 - A. Title 40 CFR § 63.11111(e), for records of monthly throughput
 - B. Title 40 CFR § 63.11111(i), for compliance due to increase of throughput

Additional Monitoring Requirements

8. The permit holder shall comply with the periodic monitoring requirements as specified in the attached "Periodic Monitoring Summary" upon issuance of the permit. Except for, as applicable, monitoring malfunctions, associated repairs, and required quality assurance or control activities (including, as applicable, calibration checks and required zero and span adjustments), the permit holder shall conduct all monitoring in continuous operation (or shall collect data at all required intervals) at all times that the pollutant-specific emissions unit is operating. The permit holder may elect to collect monitoring data on a more frequent basis and average the data, consistent with the averaging time or minimum frequency specified in the "Periodic Monitoring Summary," for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis. In no event shall data be collected and used in particular instances to avoid reporting deviations. Deviations shall be reported according to 30 TAC § 122.145 (Reporting Terms and Conditions).

Periodic Monitoring Summary

Unit/Group/Process Information						
ID No.: GRP-STACK						
Control Device ID No.: N/A	Control Device Type: N/A					
Applicable Regulatory Requirement						
Name: 30 TAC Chapter 111, Visible Emissions SOP Index No.: R1111						
Pollutant: Opacity Main Standard: § 111.111(a)(1)(C)						
Monitoring Information						
Indicator: Fuel Type						
Minimum Frequency: Annually or at any time an alternate f	uel is used					
Averaging Period: N/A						
Deviation Limit: Failure to record the type of fuel used by th	ne units.					

Periodic Monitoring Text: Record the type of fuel used by the unit. If an alternate fuel is fired, either alone or in combination with the specified gas, for a period greater than or equal to 24 consecutive hours it shall be considered and reported as a deviation or the permit holder shall conduct an observation of the stationary vent for each such period to determine if visible emissions are observed. Any time an alternate fuel is fired for a period of greater than 7 consecutive days then visible emissions observations will be conducted no less than once per week. Documentation of all observations shall be maintained. If visible emissions are present during the firing of an alternate fuel, the permit holder shall either list this occurrence as a deviation or the permit holder may determine the opacity consistent with Test Method 9. Any opacity readings that are above the opacity limit from the underlying applicable requirement shall be reported as a deviation.

Dear Senator Flores:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) renewal application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. https://gisweb.tceq.texas.gov/LocationMapper/?marker=-97.317222,31.055833&level=13.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

TCEQ Federal/Site Operating Permit O3544
Temple I
Temple Generation I, LLC
Temple, Bell County, Texas
(Air Account BF-A003-C, CN603272352, RN105380216)

Dear Mr. Chacon:

Temple Generation I, LLC (Temple I), an affiliate of BKV-BPP Power LLC, is submitting this application to the Texas Commission on Environmental Quality (TCEQ) for renewal and revision of Title V Federal Operating Permit (FOP) Number O3544 for Temple I located on the southeast side of the city of Temple in Bell County, Texas.

Temple I is submitting this renewal application in accordance with 30 TAC Chapter 122, more specifically with §122.241. TCEQ last renewed/revised the FOP on April 19, 2021. It has a five-year term, and therefore expires April 19, 2026. This renewal application is being submitted within the required timeframe of six to eighteen months prior to expiration date.

The FOP includes Acid Rain Permit and Cross-State Air Pollution Rule (CSAPR) requirements/conditions.

This application includes the following attachments that have been uploaded into STEERS:

- Attachment 1 Site Information Summary of Unit-Specific Regulatory Applicability, Process Description, Area Map, Plot Plan, and Process Flow Diagram
- Attachment 2 Administrative Forms TCEQ Forms OP-CRO2, OP-1, OP-2, OP-ACPS, OP-AR1, OP-SUMR, and Acid Rain/CSAPR Certificate of Representation

According to the TCEQ instructions for Form OP-CRO1, it is not necessary to submit this form if the certifying FOP Duly-Authorized Representative (DAR) and the Acid Rain Designated Representative (DR) submit the application in STEERS.

The included Form OP-CRO2 is to notify TCEQ of a new Acid Rain DR effective.

Attachment 3 Unit Attribute Forms - TCEQ Forms OP-UA2 (Emergency Engines), OP-UA6 (Auxiliary Boiler), OP-UA11 (Combined-Cycle Units), and OP-UA-15 (Combined-Cycle Unit Stacks)

As part of this application, for the sake of providing an all-inclusive application Temple I is submitting the current versions of all the UA forms reflecting unit-specific, positive applicability.

- Attachment 4 Applicability Determination Form TCEQ Form OP-REQ1 (Area-Wide)
- Attachment 5 Permits by Rule Supplemental Table TCEQ Form OP-PBRSUP table that provides specific information on Permits by Rule (PBR) previously claimed by Temple I for New Source Review authorization of emissions from various ancillary sources and activities.

To facilitate your review, please note the following:

- 1. Requested Changes with this Renewal The only change requested via this application are:
 - a. Update of TCEQ's records to reflect the new Acid Rain DR.
 - b. Update of the New Source Review Authorization References to reflect Standard Permit Registration No. 172658 issued May 22, 2023.
- 2. **FOP Actions Since Last Renewal** Changes since the last FOP renewal were administrative changes to assign company representatives and an Off-Permit Change. On May 24, 2023, TCEQ acknowledged an Off-Permit Change to reflect our May 24, 2023 notification for wet compression upgrades to the combined-cycle units (FOP Emission Units CTG-1 and CTG-2).
- 3. No Changes to Major NSR Summary Table Changes are not required to the Major New Source Review (NSR) Summary Table. The only New Source Review (NSR) permitting action since the FOP was last renewed/revised was TCEQ's May 22, 2023 issuance of Registration No. 172658 under the Electric Generating Units Air Quality Standard Permit to authorize wet compression upgrades to the combined-cycle units. This Standard Permit Registration has not yet been incorporated into NSR Permit No. 83503/PSDTX1111 and will not affect the NSR permit when it is incorporated.
- 4. **No New Positive Regulatory Applicability Determinations** There is no new positive regulatory applicability reflected in this application. The current versions of the unit attribute (OP-UA) forms summarized below have been completed and included in Attachment 3 to confirm/update unit-specific attributes used to define positive regulatory applicability. Form OP-REQ3 is not included as we understand that TCEQ generates specific regulatory requirements to be incorporated into the FOP based on specific applicability information provided via the application OP-UA forms.
 - a. Form OP-UA2 for the Diesel Firewater Engine (ENG-1), Diesel Emergency Engine (ENG-2), and Diesel Air Compressor Engine (ENG-4) for defining 40 CFR Part 63 (MACT) Subpart ZZZZ and 40 CFR Part 60 (NSPS) Subpart IIII applicability
 - b. Form OP-UA6 for the Auxiliary Boiler (AUX-1) for defining 40 CFR Part 60 Subpart Dc applicability
 - c. Form OP-UA11 for the Combined Cycle Units (CTG-1 and CTG-2) for defining 40 CFR Part 60 Subpart KKKK applicability. Because Temple I is not a major source of hazardous air pollutants (HAP), Form OP-UA11 Table 5 was not included and the turbines are not subject to 40 CFR Part 63 Subpart YYYY
 - d. Form OP-UA15 for the Combined Cycle Unit Stacks (CTG-1 and CTG-2) for defining 30 TAC Chapter 111 Subchapter A applicability

We would like to thank you in advance for your review of this FOP Renewal/Revision application. If you require any additional information or have any questions, please contact me at (254) 644-8614 or billpetersen@bkv-bpp.com, or our air quality consultant on this project, Brian Gunzelman, at (817) 726-6949 or bgunzelman@tas-all.com.

FEDERAL OPERATING PERMIT NO. 03544 RENEWAL AND REVISION APPLICATION

TEMPLE I

TEMPLE GENERATION I, LLC

The Temple I power plant (the Plant) is located 2892 Panda Drive on the southeast side of the city of Temple, Texas in Bell County. Temple I is the application area for the renewal of Title V Federal Operating Permit (SOP) Number O3544. The Plant is owned and operated by Temple Generation I, LLC.

The Temple Power Station (the Station) is comprised of two adjacent areas that are owned and operated by two separate entities as summarized below. Air emissions for the entire Station were initially authorized under New Source Review/ Prevention of Significant Deterioration (NSR/PSD) Permit Numbers 83503 and PSDTX1111. That air permit was split in May 2015 to reflect two separate owner/operator entities as follows:

- 1. Temple I (the Plant) is the portion of the Station owned/operated by Temple Generation I, LLC (CN603272352). It consists of combined-cycle units 1 and 2, and ancillary equipment. Associated air emissions are authorized under NSR/PSD Permit Nos. 83503 and PSDTX1111, NSR Permit No. 154740, and FOP No. O3544. On February 12, 2019, TCEQ altered NSR Permit No. 83503 and issued NSR Permit No 154740 to transfer several emission points from Permit No. 83503 to the new Permit No. 154740. These emission points consist of NSR permit Emission Point Numbers (EPN's) ENG-1, TK-1, TK-2, TK-ENG1, WO-LOAD, Maintenance Painting, Maintenance Sandblasting, and Degreasers. EPN's ENG-1, TK-1, TK-2, and TK-ENG1 have corresponding Unit ID Numbers in SOP No. O3544.
- 2. Temple II is the portion of the plant owned/operated by Temple Generation II, LLC (CN606040673). It consists of combined-cycle units 3 and 4, and ancillary equipment. Associated air emissions are authorized under NSR/PSD Permit Numbers 131621 and PSDTX1458, and Federal Operating Permit (SOP) Number O3851.

The overall process for this facility has not changed since the FOP was last renewed/revised in 2021. For reference only, this application includes the following figures. Figure 1-1 is an Area Map showing the location of the Station, with the surrounding areas. Figure 1-2 is a Site Map indicating the location of the Station within the combined property boundary. Figure 1-3 is a plot plan showing the layout of major equipment and permitted facilities. Figure 1-4 is a process flow diagram that illustrates the air emission sources. A process description is provided below.

SOP Number O3544 was last renewed/revised April 19, 2021 and is subject to a five-year renewal. Temple I requests the permit be renewed and revised in accordance with this application submittal.

The applicable regulatory requirements, that are not area-wide, are summarized as follows for the emissions units and vents/stacks represented in the FOP and FOP Applicable Requirements Summary:

• The Combined Cycle Unit Stacks (CTG-1 and CTG-2) are subject to 30 TAC Chapter 111 §111.111(a)(1)(C) visible emissions. They are grouped (Group ID No. GRP-STACK). They are

- also subject to the §111.151(a) particulate matter emissions requirements which are addressed via the area-wide FOP conditions. Periodic Monitoring is stipulated for visible emissions/opacity to demonstrate compliance with Chapter 111.
- The Combined Cycle Units (CTG-1 and CTG-2) are subject 40 CFR Part 60 (NSPS) Subpart KKKK Standards of Performance for Stationary Gas Turbines. The associated Heat Recovery Steam Generator (HRSG's)/duct burners are not subject to 40 CFR Part 60 Subparts Dc because they are subject to Subpart KKKK instead. The associated combustion turbines are not subject to 40 CFR Part 63 (MACT) Subpart YYYY because they are not located at a major source of hazardous air pollutant (HAP) emissions. The combined-cycle units are not subject to 40 CFR Part 60 Subpart TTTT because associated construction did not commence after January 8, 20124.
- The Auxiliary Boiler (AUX-1) is subject to 40 CFR Part 60 Subpart Dc Standards of Performance for Small Industrial-Commercial-Institutional Steam Generating Units.
- The Diesel Firewater Engine (ENG-1), Diesel Emergency Engine (ENG-2), and Diesel Air Compressor Engine (ENG-4) are subject to 40 CFR Part 63 Subpart ZZZZ requirements. The Diesel Firewater Engine drives the fire water pump for use should a fire event occur. The Diesel Emergency Engine drives a back-up, diesel-fired generator that provides electricity in the event of a power failure. The Diesel Air Compressor Engine drives a back-up, diesel-fired air compressor in the event the electric primary air compressor fails. They comply with 40 CFR Part 63 Subpart ZZZZ by complying with 40 CFR Part 60 Subpart IIII because the engines commenced construction after July 11, 2005 and were manufactured after April 1, 2006.

Process Description

The Plant is designed to generate nominally 750 megawatts (MW) of power and utilizes two Siemens SGT6-5000F combustion turbine generators (CTGs) in combined cycle mode (CTG-1 and CTG-2) that are fueled by natural gas only. Each CTG exhausts into a heat recovery steam generator (HRSG) and the steam produced by the HRSGs is fed to a back-pressure steam turbine generator (STG). Natural gas-fired duct burners located within each HRSG are used for supplementary firing to increase steam production and STG output. A natural gas-fired auxiliary boiler (AUX-1) is used to supplement steam flow through the HRSGs and reduce the startup time for the STGs. Exhaust gas leaving the HRSGs passes through Selective Catalytic Reduction (SCR) systems for the control of nitrogen oxide (NOx) emissions from the CTGs and duct burners. Electricity generated from the CTGs and STGs is sent to an on-site switchyard and transmitted onto the electrical grid.

Pipeline quality natural gas is delivered to the plant boundary at a pressure sufficient for use without additional compression. The natural gas fuel is sent through a knockout drum for removal of any liquid which may have been carried through from the pipeline. The gas then passes through a filter/separator to remove particulate matter and entrained liquid. Liquid in the gas stream is separated and drains to a sump. Hydrocarbon liquids in the sump are periodically removed by truck for off-site disposal.

The natural gas can then be routed through two natural gas-fired in-line heaters where the gas is heated and split into individual inlet streams to supply each CTG, HRSG duct burner, or the auxiliary boiler. Alternatively, the natural gas can bypass the heaters and can be routed directly to the fired equipment.

The combustion turbine is the main component of the combined cycle power system. Ambient air is filtered, cooled, and compressed in a multiple-stage axial flow compressor. Compressed air and fuel (heated natural gas) are mixed and combusted in the turbine dry, low-nitrogen oxide (NO_X), i.e., DLN, combustion chamber. Exhaust gas from the combustion chamber is expanded through a multi-stage power turbine that drives both the air compressor and electric power generator. Exhaust gas exiting the power turbine is ducted to a HRSG where steam is produced to generate additional electricity in a STG. Steam production in the HRSG is augmented with supplementary fired duct burners.

The high-pressure portion of the steam turbine receives high-pressure superheated steam from the HRSG and exhausts the spent steam to the reheat section of the HRSG. The steam from the reheat section of the HRSG is supplied to the intermediate-pressure section of the turbine, which expands to the low-pressure section. The low-pressure turbine also receives excess low-pressure superheated steam from the HRSG and exhausts the spent steam to the surface condenser. The steam turbine set is designed to produce electrical power without additional fuel consumption other than that produced by the duct burners.

For exhaust gases exiting the HRSGs, the Plant incorporates SCR systems for the control of NO_X emissions from the CTGs and the duct burners (i.e., in addition to utilizing low-NO_X burners). The SCR systems consist of a modular foil catalyst bed and support structure, and an aqueous ammonia injection grid. The catalyst bed is located within the HRSG at the point where the flue gas temperature is optimized for SCR conversion of NO_X. The ammonia injection grid is located within the HRSG upstream of the catalyst. SCR reduces NO_X through a catalyzed chemical reaction of NO_X by ammonia that is introduced as a reactant in the flue gas, in the presence of excess oxygen. The reaction generates nitrogen gas and water as the reduced end products that are ultimately emitted from the stack to the atmosphere. These discharge constituents are in addition to the products of combustion and the residual unconsumed ammonia reagent (i.e., ammonia slip) emissions.

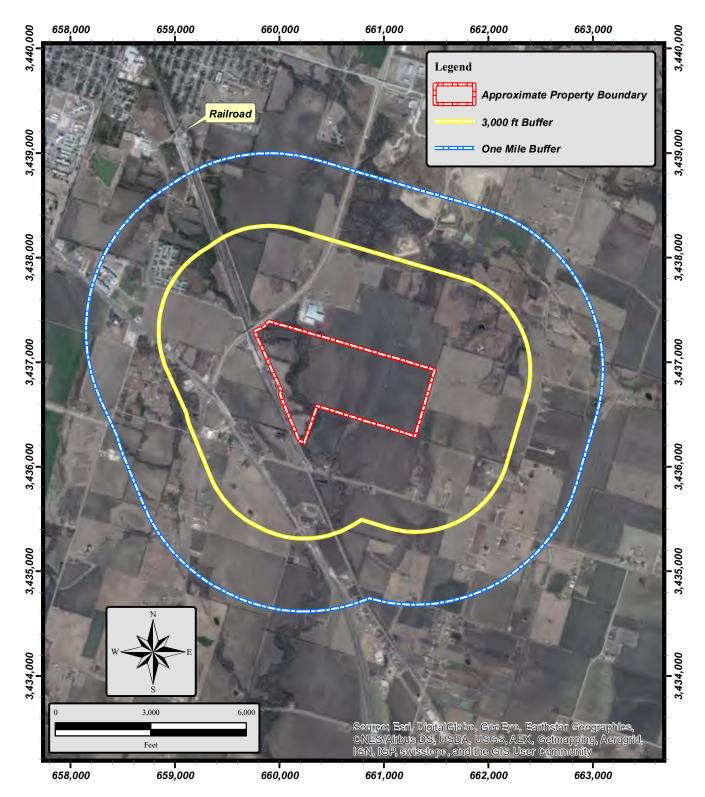

Spent steam exiting the HRSGs is condensed using a surface condenser that uses cooling water from the wet main cooling tower, the Plant Cooling Tower. As the steam is condensed, the condensate flows to the surface condenser hot well where the condensate is then recycled back to the HRSGs as makeup for the steam process. Water from the cooling tower is commonly referred to as "circulating" cooling water. A dedicated set of cooling water pumps is provided for this service.

Additional cooling water is required for auxiliary plant cooling. Cooling water for plant auxiliary purposes is not used for direct cooling of plant auxiliaries; rather a closed loop auxiliary cooling system consisting of pumps, expansion tank, and heat exchangers is provided for this purpose. Cooling water is circulated through a set of plate and frame heat exchangers to cool the closed loop coolant, a glycol/water mixture.

A diesel-fired, water pump engine (ENG-1) is available to the Plant for fire suppression. A diesel-fired, emergency power generator engine (ENG-2) provides power to the Plant during power and maintenance outages. A diesel-fired, portable standby air compressor engine (ENG-4) provides compressor air for instrumentation, etc should the electric primary air compressor fail. Small diesel fuel storage tanks (< 2,500 gallon [gal]) are associated with the engines.

Other equipment supporting plant operations include:

- Cooling water treatment system;
- Station sumps, sump pumps, and oil/water separator;
- Feed water treatment system including:
 - Demineralizer regeneration tank, storing sulfuric acid or equivalent;
 - Neutralization tank, storing a water/sodium sulfate or similar solution; and
 - Demineralizer regeneration tank, storing sodium hydroxide solution or equivalent
- Aqueous ammonia tanks for supply to the SCR NO_X emissions control systems,
- Plant and instrument air compressors and auxiliary equipment;
- Steam and water sampling system;
- Deaerator vents:
- Station maintenance activities, including painting, sandblasting, and solvent degreasers;
- Small (< 5,000 gal) natural gas condensate tanks, small (< 12,000 gal) lubrication oil tanks, and small (< 300 gal) hydraulic oil tanks.
