Dear Senator Birdwell:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) renewal application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

Dear Representative Curry:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) renewal application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-97.244166,31.481111&level=13>.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site.

This letter is being sent to you for information only and no action is required. If you need further information, please contact me at (512) 239-1250.

Dear Senator Birdwell:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) renewal application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

Periodic Monitoring Text: Visible emissions observations shall be made and recorded. Note that to properly determine the presence of visible emissions, all sources must be in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 miles, away from the emission source during the observation. The observer shall select a position where the sun is not directly in the observer's eyes. If the observations cannot be conducted due to weather conditions, the date, time, and specific weather conditions shall be recorded. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. If visible emissions are observed, the permit holder shall report a deviation. As an alternative, the permit holder may determine the opacity consistent with Test Method 9, as soon as practicable, but no later than 24 hours after observing visible emissions. If a Test Method 9 is performed, the opacity limit is the corresponding opacity limit associated with the particulate matter standard in the underlying applicable requirement. If there is no corresponding opacity limit in the underlying applicable requirement, the maximum opacity will be established using the most recent performance test. If the result of the Test Method 9 is opacity above the corresponding opacity limit (associated with the particulate matter standard in the underlying applicable requirement or as identified as a result of a previous performance test to establish the maximum opacity limit), the permit holder shall report a deviation.

1.1 SITE INFORMATION

Lehigh White Cement Company, LLC (Lehigh White Cement) is submitting a Title V Federal Operating Permit (FOP) renewal application for the Lehigh White Cement Waco Plant located in Woodway, McLennan County, Texas. The initial FOP was issued on May 11, 2004, by the Texas Commission on Environmental Quality (TCEQ). The FOP's latest renewal was issued on June 23, 2021. The most recent permit revision was issued on May 25, 2022. There have been no changes to the units or processes at the site since the last permit revision.

In accordance with the Title 30 Texas Administrative Code (TAC) Chapter 122.241(a), the permit shall expire no later than five (5) years from the initial issuance or renewal. This FOP renewal application is being submitted in accordance with the requirements found in §122.241.

This submittal will update the Permit Shield to document negative applicability for potentially applicable requirements, update the groups so that each of the units within a group will have identical applicable requirements, and update the permit to include two (2) standalone emission units, that were the only units remaining in their respective existing groups. Further, this submittal will update the permit to add Periodic Monitoring (PM) requirements. A summary of the revisions is provided in Section 2.0 of this application.

The following sections include the required forms, and a brief description of any changes, including all affected emission units and all applicable requirements affected by the change. The current versions of the unit attribute forms are provided.

2.0 SUMMARY OF REVISIONS

The following is a summary of the revisions to the Federal Operating Permit that are included in this renewal application.

Updates to the Permit Shield

The Permit Shield is being updated to document negative applicability for potentially applicable 40 CFR Part 60 Subpart F (Standards of Performance for Portland Cement Plants) and 40 CFR 63 Subpart DDDDD (National Emission Standards for Major Sources: Industrial, Commercial, and Institutional Boilers and Process Heaters). Form OP-REQ2 has been completed to document negative applicability for Unit ID No. AH-1, and Group ID Nos. GRPCCS, GRPCS, GRPCSS, and GRPCSV.

Updates to Groups

The groups are being updated so that each of the units within a group will have identical applicable requirements. Two new groups (GRPVENT1 and GRPVENT2) have been added to the permit. Forms OP-2 and OP-SUMR have been completed to document the new groups and to update the existing groups. In addition, two (2) existing groups (GRPCCNV and GRPESP1) are being removed from the permit as the two (2) standalone emission units remaining in each group were the only units remaining in their respective existing groups.

Updates to Periodic Monitoring (PM)

Form OP-MON is provided to add case-by-case Periodic Monitoring (PM) requirements for Group ID Nos. GRPVENT1 and GRPVENT2.

I. Identifying Information

Averaging Period: N/A

Periodic Monitoring Text: Visible emissions observations shall be made and recorded. Note that to properly determine the presence of visible emissions, all sources must be in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 miles, away from the emission source during the observation. The observer shall select a position where the sun is not directly in the observer's eyes. If the observations cannot be conducted due to weather conditions, the date, time, and specific weather conditions shall be recorded. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor.

If visible emissions are observed, the permit holder shall report a deviation. As an alternative, the permit holder may determine the opacity consistent with Test Method 9, as soon as practicable, but no later than 24 hours after observing visible emissions. If a Test Method 9 is performed, the opacity limit is the corresponding opacity limit associated with the particulate matter standard in the underlying applicable requirement. If there is no corresponding opacity limit in the underlying applicable requirement, the maximum opacity will be established using the most recent performance test. If the result of the Test Method 9 is opacity above the corresponding opacity limit (associated with the particulate matter standard in the underlying applicable requirement or as identified as a result of a previous performance test to establish the maximum opacity limit), the permit holder shall report a deviation.
