Dear Mr. Chacon:

Colorado Bend II Power, LLC (Colorado Bend II), a subsidiary of Constellation Energy Generation, is submitting this application to the Texas Commission on Environmental Quality (TCEQ) for renewal and revision of Title V Federal Operating Permit (FOP) Number O3849 for Colorado Bend II located southeast of Wharton, Texas, in Wharton County. Colorado Bend II is submitting this renewal application in accordance with 30 TAC Chapter 122, more specifically with §122.241. TCEQ last renewed/revised the FOP on June 24, 2021. It has a five-year term, and therefore expires June 24, 2026. This renewal application is being submitted within the required timeframe of six to eighteen months prior to expiration date.

The FOP includes Acid Rain Permit and Cross-State Air Pollution Rule (CSAPR) requirements/conditions.

This application includes the following attachments that have been uploaded into STEERS:

- **Attachment 1 Site Information** - Summary of Unit-Specific Regulatory Applicability, Process Description, Area Map, Plot Plan, and Process Flow Diagram
- **Attachment 2 Administrative Forms** - TCEQ Forms OP-CRO1, OP-CRO2, OP-DEL, OP-1, OP-2, OP-ACPS, OP-AR1, OP-SUMR, and Acid Rain/CSAPR Certificate of Representation

Form OP-CRO1 is being submitted to certify this FOP and Acid Rain renewal application in case the certifying FOP Duly-Authorized Representative (DAR) and the Acid Rain Designated Representative (DR) cannot achieve that in STEERS since they are different individuals.

The included Forms OP-CRO2 for the FOP Responsible Official (RO) and Acid Rain DR are being submitted for the FOP RO and Acid Rain DR to update TCEQ's records with respect to administrative information for this individual.

The Form OP-DEL is to notify TCEQ of a new FOP DAR.

- **Attachment 3 Unit Attribute Forms** - TCEQ Forms OP-UA2 (Emergency Engines), OP-UA6 (Auxiliary Boiler), OP-UA11 (Combined-Cycle Units), and OP-UA-15 (Combined-Cycle Unit Stacks)

Since the last renewal, TCEQ updated Form OP-UA11 to include Tables 7a and 7b for 40 CFR Part 60 Subpart TTTT (NSPS TTTT) applicability. Therefore, those additional tables are being submitted to provide unit attributes that are the basis for positive NSPS TTTT applicability for the Combined-Cycle Units (CTDB3-A and CTDB3-B).

As part of this application, for the sake of providing an all-inclusive application Colorado Bend II is submitting the current versions of all the UA forms reflecting unit-specific, positive applicability.

- **Attachment 4 Applicability Determination Form** - TCEQ Form OP-REQ1 (Area-Wide)
- **Attachment 5 Permits by Rule Supplemental Table** - TCEQ Form OP-PBRSUP table that provides specific information on Permits by Rule (PBR) previously claimed by Colorado Bend II for New Source Review authorization of emissions from various ancillary sources and activities.

To facilitate your review, please note the following:

1. **Requested Changes with this Renewal** - The only changes requested via this application are:
 - a. Update of TCEQ's records with respect to administrative information for the FOP RO and the Acid Rain DR, and to reflect the new FOP DAR.
 - b. Add the detailed NSPS TTTT applicable requirements for CTDB3-A and CTDB3-B as stated above via Form OP-UA11 in Attachment 3. Otherwise, there is no new positive regulatory applicability reflected in this application.
2. **FOP Actions Since Last Renewal** - The only changes since the last FOP renewal were administrative changes including previous changes to assigned company representatives.
3. **No Changes to Major NSR Summary Table** - Changes are not required to the Major NSR Summary Table. There have been no New Source Review (NSR) permitting actions since the FOP was last renewed/revised.
4. **No New Positive Regulatory Applicability Determinations** - There is no new positive regulatory applicability reflected in this application. The current versions of the unit attribute (OP-UA) forms summarized below have been completed and included in Attachment 3 to confirm/update unit-specific attributes used to define positive regulatory applicability. Form OP-REQ3 is not included as we understand that TCEQ generates specific regulatory requirements to be incorporated into the FOP based on specific applicability information provided via the application OP-UA forms.
 - a. Form OP-UA2 for the Fire Water Pump Engine (FWP2) and Emergency Generator Engine (EG3) - for defining 40 CFR Part 63 (MACT) Subpart ZZZZ and 40 CFR Part 60 (NSPS) Subpart IIII applicability
 - b. Form OP-UA6 for the Auxiliary Boiler (AUX3) – for defining 40 CFR Part 60 Subpart Dc applicability
 - c. Form OP-UA11 for the Combined Cycle Units (CTDB3-A and CTDB3-B) – for defining 40 CFR Part 60 Subpart KKKK applicability.
 - d. Form OP-UA15 for the Combined Cycle Unit Stacks (CTDB3-A and CTDB3-B) – for defining 30 TAC Chapter 111 Subchapter A applicability

We would like to thank you in advance for your review of this FOP Renewal/Revision application. COLORADO BEND II

COLORADO BEND II POWER, LLC

The Colorado Bend II power plant (the Plant) is located at 4023 South State Highway 60, about one mile southeast of Wharton, Texas which is in Wharton County. The Plant is the application area for Title V/Federal/Federal Operating Permit (FOP) Number O3849. The Plant is owned and operated by Colorado Bend II Power, LLC.

The overall process for this facility has not changed since the FOP was initially issued in 2016. For reference only, Figure 1-1 is an Area Map showing the location of the plant within the surrounding area. Figure 1-2 is a Plot Plan showing the layout of major equipment and permitted facilities. Figure 1-3 is a Process Flow Diagram that illustrates the plant air emission sources. A process description is provided below.

FOP Number O3849 was last renewed/revised on June 24, 2021 and is subject to a five-year renewal. Colorado Bend II requests the permit be renewed and revised in accordance with this application submittal.

Unit-Specific Regulatory Applicability Summary

The applicable regulatory requirements, that are not area-wide, are summarized as follows for the emissions units and vents/stacks represented in the FOP and FOP Applicable Requirements Summary:

- The Combined Cycle Unit Stacks (CTDB3-A and CTDB3-B) are subject to 30 TAC Chapter 111 §111.111(a)(1)(C) visible emissions and §111.151(a) particulate matter emissions requirements. Periodic Monitoring is stipulated for visible emissions/opacity and particulate matter emissions to demonstrate compliance with Chapter 111.
- The Combined Cycle Units (CTDB3-A and CTDB3-B) are subject 40 CFR Part 60 (NSPS) Subpart KKKK Standards of Performance for Stationary Gas Turbines. The associated Heat Recovery Steam Generator (HRSG's)/duct burners are not subject to 40 CFR Part 60 Subparts Dc because they are subject to Subpart KKKK instead. The associated combustion turbines are not subject to 40 CFR Part 63 (MACT) Subpart YYYY because Colorado Bend II is not a major source of hazardous air pollutant (HAP) emissions.
- The Combined Cycle Units (CTDB3-A and CTDB3-B) are subject 40 CFR Part 60 Subpart TTTT Standards of Performance for Greenhouse Gas Emissions for Electric Generating Units.
- The Auxiliary Boiler (AUX3) is subject to 40 CFR Part 60 Subpart Dc Standards of Performance for Small Industrial-Commercial-Institutional Steam Generating Units.
- The Fire Water Pump Engine (FWP2) and Emergency Generator Engine (EG3) are subject to 40 CFR Part 63 Subpart ZZZZ requirements. The Fire Water Pump Engine drives the fire water pump for use should a fire event occur. The Emergency Generator Engine drives a back-up, diesel-fired generator that provides electricity in the event of a power failure. They comply with 40 CFR Part 63 Subpart ZZZZ by complying with 40 CFR Part 60 Subpart IIII because the engines commenced construction after July 11, 2005 and were manufactured after April 1, 2006.

Process Description

The Plant is comprised primarily of two natural gas-fired combined-cycle electric power generation trains/units. “Combined-cycle” means the unit generates electricity via a combustion turbine generator that is driven by a combustion turbine (CT); and via a steam turbine generator that is driven by steam generated in a Heat Recovery Steam Generator (HRSG) associated with each CT. The exhaust gas from each CT is routed to the associated HRSG, from which it is discharged via a common stack. The combined-cycle unit stacks are identified by FOP Emission Point Unit Identifier (ID) Nos. CTDB3-A and CTDB3-B.

The CT’s are fired with pipeline natural gas. They rotate an electrical generator to generate electricity. The main components of a combustion turbine generator consist of a compressor, combustor, turbine, and generator. The compressor pressurizes combustion air to the combustor where the fuel is mixed with the combustion air and combusted. Hot exhaust gases then enter the turbine where the gases expand across the turbine blades, driving a shaft to power an electric generator.

Exhaust gas exits each CT and is routed to an associated HRSG for heat recovery. Heat recovered from the exhaust gas in the HRSG’s is used to produce steam. Steam generated in the HRSG’s is used to drive a common steam turbine and associated electrical generator. The HRSG’s are equipped with duct burners (DB’s) to add supplemental heat to the CT exhaust to enhance steam production. The duct burners are fired with pipeline-quality natural gas. The combined CT/duct burner exhaust for each combined-cycle unit is discharged through a stack to atmosphere. The two combined cycle units produce electricity for sale to the Electric Reliability Council of Texas (ERCOT) power grid. The units may operate at reduced load to respond to changes in system power requirements and/or stability.

Steam produced by the two HRSG’s is routed to the steam turbine. NO_x emissions generated from combustion in the combined cycle units (FOP Emission Unit ID Nos. CTDB3-A and CTDB3-B) are minimized by low-NO_x combustors and Selective Catalytic Reduction (SCR) systems. The SCR systems use aqueous ammonia as a reagent. CO and VOC emissions generated from combustion in the combined cycle units is reduced by an Oxidation Catalyst.

Other potential sources of air contaminants associated with the Plant include:

- combustion turbine and steam turbine lube oil reservoir vapor extractors,
- a natural gas-fired auxiliary boiler (FOP Emission Unit ID No. AUX3),
- a natural gas-fired dew point heater for preheating natural gas fuel when needed,
- natural gas piping,
- aqueous ammonia piping,
- a diesel-fired emergency generator (FOP Emission Unit ID No. EG3) and associated diesel storage tank (FOP Emission Unit ID No. DSL-TK1),
- a diesel-fired emergency fire water pump (FOP Emission Unit ID No. FWP2) and associated diesel storage tank (FOP Emission Unit ID No. DSL-TK2),
- plant diesel and gasoline tanks (FOP Emission Unit ID No. DSL-TK3 and GAS-TK1),
- water/wastewater treatment systems,
- plant sumps, sump pumps, and oily water separator,
- plant and instrument air compressors and auxiliary equipment, and
- plant maintenance activities, including welding, painting, sandblasting, and solvent degreasers.

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Protecting Texas by Reducing and Preventing Pollution

October 8, 2025

THE HONORABLE JOAN HUFFMAN
TEXAS SENATE
PO BOX 12068
AUSTIN TX 78711-2068

Re: Accepted Federal Operating Permit Renewal Application
Project Number: 39095
Permit Number: O3849

Colorado Bend II
Wharton, Wharton County
Regulated Entity Number: RN110119419
Customer Reference Number: CN604686030

Dear Senator Huffman:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) renewal application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-96.065833,29.286944&level=13>.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

The Honorable Joan Huffman
