Regulated Entity Number: RN100215896
Customer Reference Number: CN605629849

Dear Sir/Madame,

BHER Power Resources, Inc. is submitting the enclosed application documents for a renewal of the Site Operating Permit (SOP) O-0091 which was issued under the Texas Commission of Environmental Quality's (TCEQ) Air Permit Division, reissued June 4, 2021. This permit expires on June 4, 2026, therefore in accordance with 30 TAC §122.241 an application for renewal of the permit is being submitted at least six months prior to the permit expiration and not sooner than 18 months before the permit expiration. The permit includes Title IV Acid Rain requirements of the Clean Air Act and other applicable regulations, thus an application for Title IV renewal is also enclosed.

The Facility operates two GE Frame 7EA gas turbines for the production of electricity. The electricity is sold into the Electric Reliability Council of Texas (ERCOT) grid. This renewal reflects the SOP revision finalized in September 2025 to update the SOP to include a reference to the amendment of the Prevention of Significant Deterioration (PSD) Permit 17411 and PSD-TX-720-M2 that was issued May 23, 2024. The renewal for PSD Permit 17411 and PSD-TX-720-M2 was subsequently issued on June 6, 2025, and will expire on June 6, 2035.

If you have any questions or require additional information, please contact Anoop Sukumaran at Anoop.Sukumaran@calenergy.com or (760) 348-4275.

Sincerely,

Drew Kirk

1.0 Introduction

On behalf of BHER Power Resources, Inc. (BHER), Barr Engineering Company (Barr) has prepared this document for a Site Operating Permit (SOP) renewal application.

1.1 Purpose

The purpose of this document is to provide supporting information for an SOP renewal application.

1.2 Location

This Facility is located in Big Spring, Howard County, Texas.

1.3 Process Description

BHER owns and operates the C.R. Wing Cogeneration Plant located in Big Spring, Texas. The Facility operates two GE Frame 7EA gas turbines for the production of electricity. The electricity is sold into the Electric Reliability Council of Texas (ERCOT) grid. The plant's gas turbines and a black start generator are currently permitted under Title V Permit 0-00091 and Prevention of Significant Deterioration (PSD) Permit No. 17411 and PSD-TX-720-M2. A maintenance generator at the plant is authorized under Permit by Rule and the Title V Permit.

Each gas turbine is coupled to an electrical generator. Since the turbines were installed, each generator has routinely exported between 45 to 80 megawatts (MW) (depending on the ambient conditions and dispatch schedule). The gas turbines operate with dry low NO_x (DLN) burners which are fired with natural gas.

In each of the two gas turbines, atmospheric air is drawn in, pressurized and forced into the turbine combustor chamber where it is mixed with fuel in a steady flow and combusted. The DLN burners control NO_x and CO emissions through lean premix and good combustion practice. The compressed and heated mixture of air and combustion products then flows through the turbine, decreasing the temperature and pressure of the gas as the heat energy is converted into mechanical work of rotation. The rotation of each turbine shaft drives an electric generator designed to produce approximately 75 MW of electricity. Total net electrical generation from the plant is approximately 150 MW under normal operating conditions.

The turbine exhaust gases are vented to the atmosphere through individual stacks - emissions point# E-1A and E-2A, for gas turbines No. 1 and 2 respectively. The exhaust gasses exit the stacks at approximately 160 - 230 ft/sec.

The turbines are permitted in the TCEQ Air Quality Permit No. 17411, PSD Permit No. PSDTX720M2 and Federal Operating Permit No. 0-00091. The turbines are also subject to New Source Performance Standards (NSPS) found in 40 CFR 60 Subpart GG of Part 60 of Title 40 of the Code of Federal Regulations (40 CFR 60 Subpart GG), titled "Standards of Performance for Stationary Gas Turbines".

2.3.1 Currently Permitted Turbine Reduced Load Operations

The turbines may operate at reduced load during periods of maintenance and testing and startup and shutdown (MSS). The updated Maximum Allowable Emission Rate Table (MAERT) includes alternative emission limits for these scenarios.

2.3.2 Auxiliary Generators

BHER also operates two emergency generator engines. The larger engine (1,500 kW), which is known as the black- start engine, is sometimes used during the startup of the two gas turbine units and is authorized under TCEQ Air Quality Permit No. 17411, PSD Permit No. PSD-TX-720M-2 and Federal Operating Permit No. 0-00091. The smaller engine (450 kW) is authorized by Permit by Rule (PBR) §106.511 under Title 30 of the Texas Administrative Code (TAC). Neither generator operates concurrently with the turbines, except during turbine start-up or for routine maintenance and testing. The engines are also subject to National Emission Standards for Hazardous Air Pollutants (NESHAP) found in 40 CFR 63 Subpart ZZZZ of Part 63 of Title 40 of the Code of Federal Regulations (40 CFR 63 Subpart ZZZZ), titled "National Emissions Standards for Hazardous Air Pollutants for Stationary Reciprocating Internal Combustion Engines". BHER utilizes a 150-barrel storage tank to supply fuel to both emergency generator engines. This tank is exempt from New Source Review (NSR) permitting requirements under PBR §106.472.

2.3.3 Gas Turbine Emissions Measurement Equipment

In October 2003, the C.R. Wing cogeneration plant ceased routine delivery of steam to the Alon Refinery (now owned by Delek) due to the expiration of a long-term contract which provided for these deliveries. As a result, the Facility lost its status as a qualifying Facility and became subject to the requirements of 40 CFR 75. An extractive Continuous Emissions Monitoring System (CEMS) manufactured by Custom Instrumentation Services Corporation was installed for each gas turbine. The CEMS were originally located on the combined cycle stacks but were relocated to the turbine stacks and recertified when the combined cycle systems were shut down and the emissions were permanently rerouted to the turbine stacks for simple cycle operation. The CEMS are housed in metal shelters located at the base of each turbine stack. A common Data Acquisition and Handling System (DAHS) located in the power plant control room gathers data from each CEMS. The DAHS provide historical data storage with access for reviewing and editing, generating all required reports in the formats acceptable to the EPA and the State.

2.3.4 Plant Auxiliary Systems

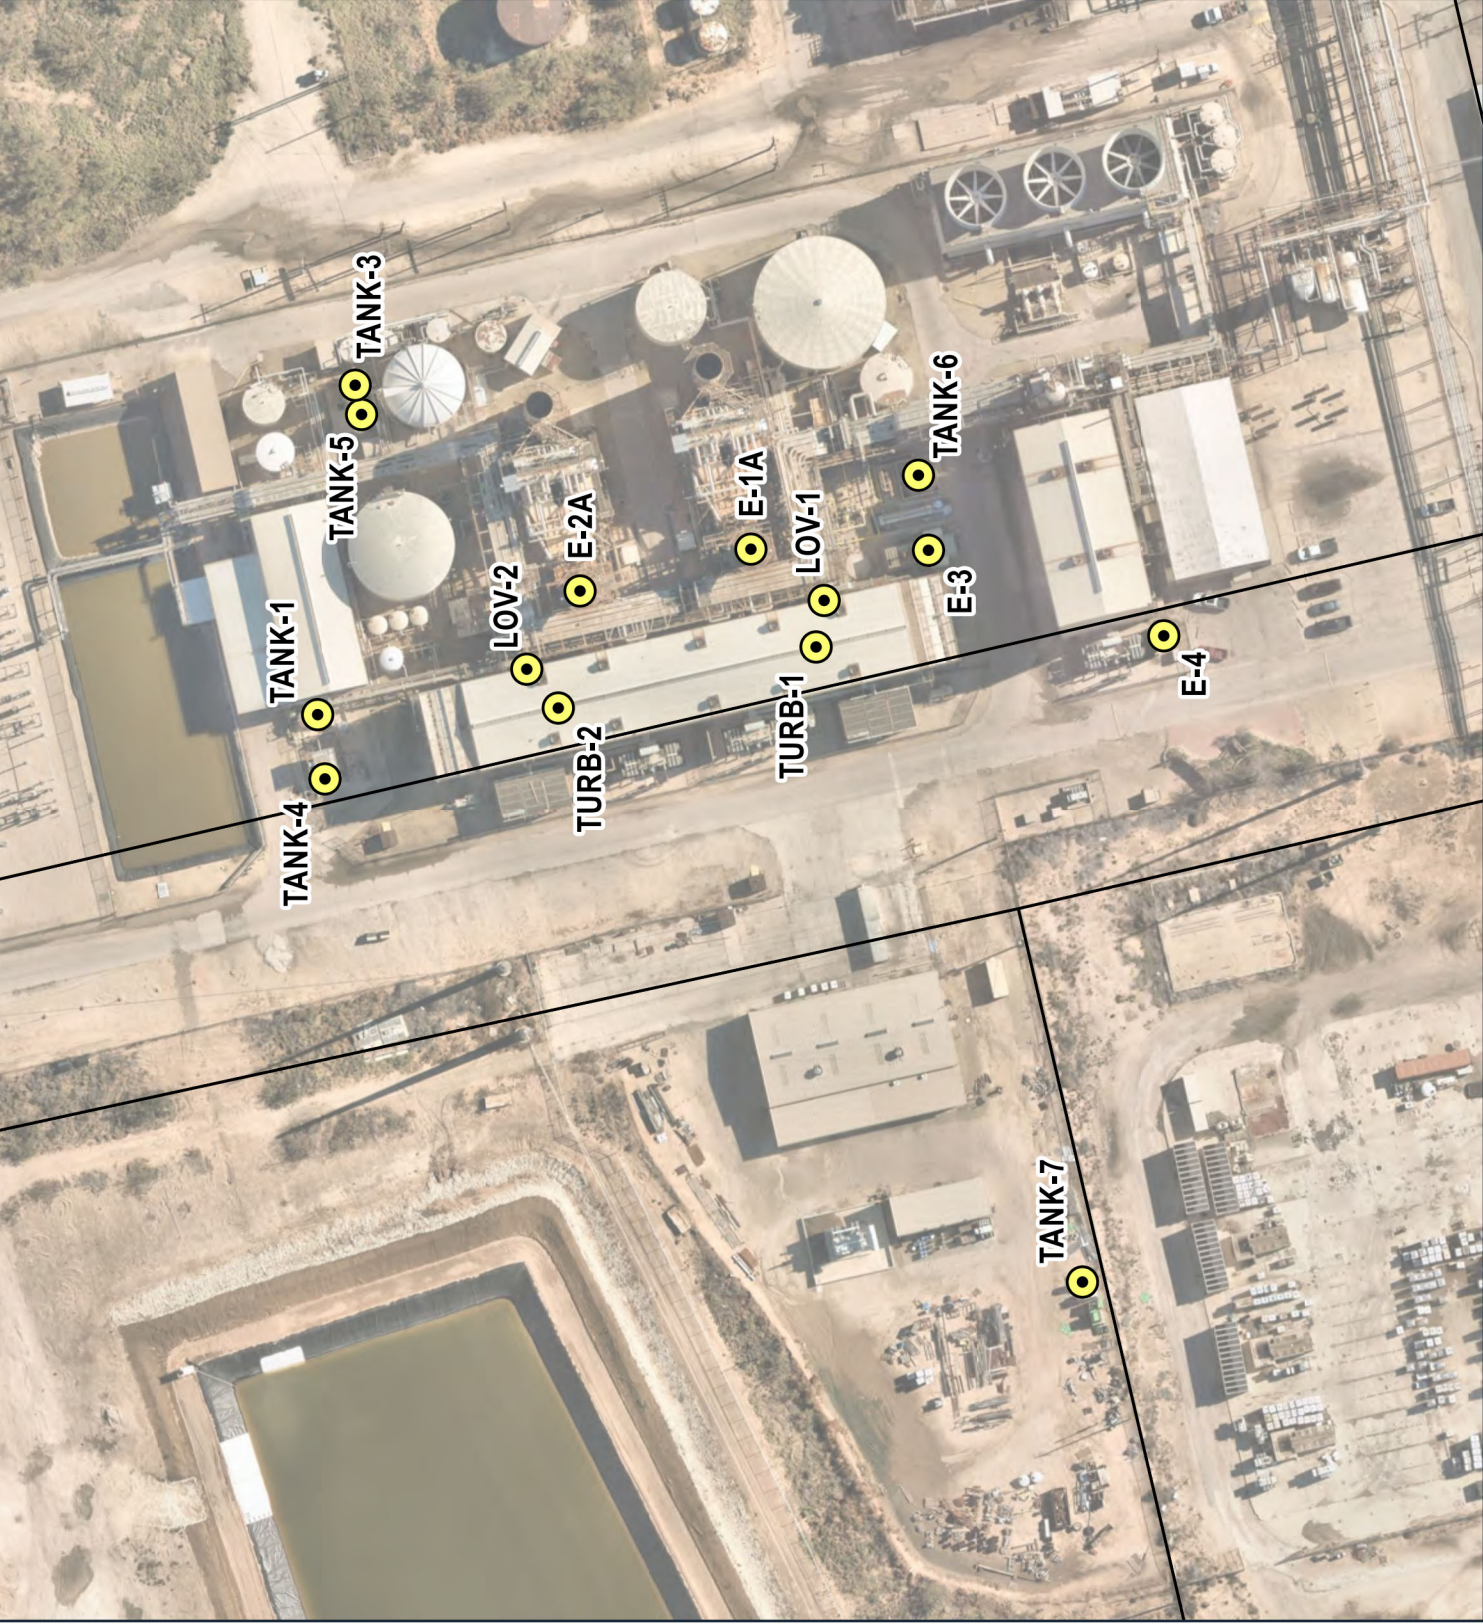

Various plant systems support the generation of electricity including water supply and treatments systems, building heating and cooling systems, and wastewater systems. Activities such as cleaning, maintenance and vehicle operation also support the generation of electricity. These activities generate insignificant emissions some of which are covered by various permits-by-rule issued by TCEQ. The gasoline tank is also subject to 40 CFR 63 Subpart CCCCCC of Part 63 of Title 40 of the Code of Federal Regulations (40 CFR 63 Subpart CCCCCC), titled "National Emission Standards for Hazardous Air Pollutants for Source Category: Gasoline Dispensing Facilities". There is no notification or reporting requirements since the throughput is under 10,000 gallons per month.

2.3.5 Regulatory Requirements & Permits

The Facility operates under the following permits:

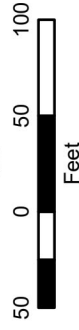

- TCEQ Air Quality Permit No. 17411
- PSD Permit No. PSDTX720M2
- Permit: 091 Federal Operating Permit (Title V) and Acid Rain Permit (Title IV)

Regulatory requirements are incorporated in the above reference permits.

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Protecting Texas by Reducing and Preventing Pollution

October 23, 2025

THE HONORABLE KEVIN SPARKS
TEXAS SENATE
PO BOX 12068
AUSTIN TX 78711-2068

Re: Accepted Federal Operating Permit Renewal Application
Project Number: 39170
Permit Number: O91
Bher Power Resources, Inc.

Big Spring, Howard County
Regulated Entity Number: RN100215896
Customer Reference Number: CN605629849

Dear Senator Sparks:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) renewal application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-101.422222,32.272222&level=13>.

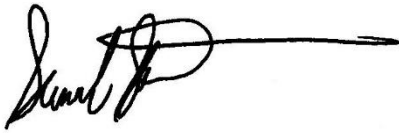

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

The Honorable Kevin Sparks
