1. EXECUTIVE SUMMARY

Enterprise Midland Basin Midstream LLC (Enterprise) owns and operates a natural gas processing plant near Midland, Texas (Poseidon Gas Plant), which is located in Glasscock County. Enterprise has been assigned TCEQ Customer Reference Number (CN) 604937243. The Poseidon Gas Plant has been assigned TCEQ Regulated Entity Number (RN) 112090519. The site is authorized under Oil and Gas Non-Rule Standard Permit (6002) under Registration No. 178396.

Based on potential to emit calculations, the Facility will be classified as a major source of carbon monoxide (CO) emissions under the Title V operating permit rules. Therefore, this application is to authorize operation of the air emission sources at Poseidon Gas Plant under a Title V Site Operation Permit (SOP) and addresses all active air authorizations, including evaluation of permitting and compliance requirements for all operations.

An abbreviated application was submitted on October 29th, 2025 and assigned Permit No. O-4854. This application is the subsequent submittal of the full application for TCEQ review.

1.1 Application Contents

The enclosed initial SOP application for the Poseidon Gas Plant consists of the following sections:

- Section 3. Area Map
- Section 4. Plot Plan
- Section 5. TCEQ Form OP-CRO1
- Section 6. TCEQ Form OP-1

2. PROCESS DESCRIPTION AND PROCESS FLOW DIAGRAM

The Poseidon Gas Plant is a cryogenic natural gas processing operation. Inlet gas from field compressor stations enters the plant at high pressure through slug catchers, where free hydrocarbon liquids are removed from the gas stream. From the slug catchers, inlet gas is sent to the gas processing unit operation which consists of an amine treatment unit for removal of CO₂ and small amounts of H₂S, a dehydration unit, followed by a cryogenic processing unit including a demethanization unit, with residue gas compression. Inlet liquids are routed to other nearby processing facilities. The cryogenic process generates natural gas liquids (NGL's) which are handled under pressure and sent to NGL sales via pipeline. Processed inlet gas (residue gas) is compressed and sent to sales via pipeline and is utilized for fuel onsite.

Acid gas components, H₂S and CO₂, are absorbed by the lean amine solution in the amine contactor and are then liberated from the rich amine solution in the amine pre-heater and regeneration system. Regenerated, lean amine is recycled to the amine contactor to continue the process of gas sweetening. The vapors from the amine flash tank vent and the amine acid gas vent (FIN: AMINE-2) are controlled by routing the emissions to the Poseidon Gas Plant acid gas flare (EPN: FS-1002) for combustion.

Treated gas then enters a glycol dehydration unit followed by molecular sieve dehydration units for residual water removal. The flash tank emissions and still vent vapors from the dehydration unit (FIN: DEHY-2) are routed to the Poseidon Gas Plant acid gas flare (EPN: FS-1002) for combustion. The dry treated gas is next routed to the cryogenic process to recover natural gas liquids.

The cryogenic process includes heat exchangers, a turboexpander unit, gas/liquids separation and a demethanizer. Residue gas from the demethanizer is recompressed utilizing electrically driven compressor units and delivered to a sales pipeline. A portion of the residue gas is utilized for onsite fuel. Natural gas liquids recovered from the inlet gas stream by the cryogenic process are filtered and pumped to a sales pipeline.

The Poseidon Gas Plant Process Flare (EPN: FS-1001) is utilized to handle emergency events and vapors generated from routine process vents (FIN: PROCESS-2), which includes in part, vapors from the closed drain tanks.

Onsite slop oil storage is used to collect produced water and residual organics generated throughout the process. The storage tank vapors (EPN: TK-1001) and vapors from offloading this material to tank trucks (EPN: L-2) are minimal.

Multiple heaters (EPN's: HTR-1002, HE-1014) provide heat needed for the various process units. A process heater (EPN: HTR-1001) provides heat for molecular sieve generation.

The Facility has one (1) natural gas-fired emergency generator (EPN: GEN-203) to provide backup power when necessary. The engine will not operate over 876 hours per year during normal operations

Public Involvement Plan Form for Permit and Registration Applications

The Public Involvement Plan is intended to provide applicants and the agency with information about how public outreach will be accomplished for certain types of applications in certain geographical areas of the state. It is intended to apply to new activities; major changes at existing plants, facilities, and processes; and to activities which are likely to have significant interest from the public. ENTERPRISE MIDLAND BASIN MIDSTREAM LLC
POSEIDON GAS PLANT
GLASSCOCK COUNTY, TEXAS
SEPTEMBER 2025**

1.0 INTRODUCTION

Enterprise Midland Basin Midstream LLC (Enterprise) owns and operates the Poseidon Gas Plant in Glasscock County, Texas (Facility).

The Facility is authorized under a Texas Commission on Environmental Quality (TCEQ) 30 TAC § 116.620 Standard Permit for Oil and Gas Facilities, Registration Number 178396.

Based on potential to emit calculations, the Facility is classified as a major source of carbon monoxide (CO) emissions under the Title V operating permit rules.

The sources located at the Facility are currently included in Title V Operating Permit No. O-4230 which also covers sources from the Enterprise Trident Gas Plant. Trident Gas Plant and Poseidon Gas Plant were previously covered under a single Standard Permit and as such a single Title V permit. The sites have since been disaggregated to two separate Standard Permit authorizations, each with a separate Regulated Entity (RN) Number.

Based on TCEQ guidance, Enterprise is pursuing a separate Title V Operating Permit for Poseidon Gas Plant. Upon approval, O-4230 will be revised to remove sources associated with Poseidon Gas Plant. Therefore, enclosed is an abbreviated operating permit application as required by §122.130(b)(1).

3.0 FACILITY LOCATION AND DESCRIPTION

Enterprise owns and operates the Poseidon Gas Plant (Facility) located in Glasscock County, Texas. A Facility Plot Plan is provided in Figure 3-1.

The latitude-longitude and Universal Transverse Mercator (UTM) coordinates of the Facility are:

Latitude: 31.854842

Longitude: -101.76638

UTM Coordinates: NAD 83, Zone 14R

238,244 m Easting

3,527,683 m Northing

The Poseidon Gas Plant is a cryogenic natural gas processing operation. Inlet gas from field compressor stations enters the plant at high pressure through slug catchers, where free hydrocarbon liquids are removed from the gas stream. From the slug catchers, inlet gas is sent to the gas processing unit operation which consists of an amine treatment unit for removal of CO₂ and small amounts of H₂S, a dehydration unit, followed by a cryogenic processing unit including a demethanization unit, with residue gas compression. Inlet liquids are routed to other nearby processing facilities. The cryogenic process generates natural gas liquids (NGL's) which are handled under pressure and sent to NGL sales via pipeline. Processed inlet gas (residue gas) is compressed and sent to sales via pipeline and is utilized for fuel onsite.

Regulated Entity Number: RN112090519

Dear Senator Sparks:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) initial issuance application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-101.766388,31.854722&level=13>.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

The Honorable Kevin Sparks
