Regulated Entity Number: RN102229572  
Customer Reference Number: CN601229917

Dear Senator Sparks:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) renewal application for a site located in your district. This application is being processed in an expedited manner, as allowed by the commission's rules in 30 Texas Administrative Code, Chapter 101, Subchapter J. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-102.138055,31.661666&level=13>.

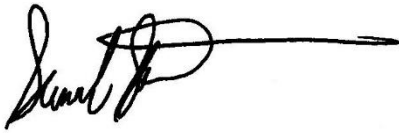

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

## 1.3 Current Authorizations

Presently, emissions resulting from the site's operations are authorized by TCEQ New Source Review (NSR) Permit Number (No.) 22065, PSDTX819, Standard Permit Registration No. 71491, and various registered and unregistered Permit By Rules (PBR). Forms OP-REQ1 and OP-PBRSUP in this application contain a detailed listing of these authorizations.

## 2.0 Process Description

The Pegasus Gas Plant is a cryogenic natural gas processing plant with a capacity to process approximately 100 million standard cubic feet per day (MMSCFD) of gas. The plant produces a dry residue gas product and fractionated liquid hydrocarbon products, specifically liquid ethane, propane, and natural gas liquids. The plant consists of inlet separation, amine sweetening, dehydration, and a cryogenic unit. Produced water and condensate are removed from field gas at inlet separation. The produced water is disposed off-site. The condensate is routed to condensate storage tanks and subsequently re-injected into the gas pipeline for sales.

After exiting the inlet separator, the gas is compressed and routed to the amine sweetening unit which sweetens the gas by removing carbon dioxide (CO<sub>2</sub>) and hydrogen sulfide (H<sub>2</sub>S). The emissions associated with the flash tank and amine still vent are controlled by the acid gas flare.

The dehydration unit consists of molecular sieve beds and a triethylene glycol (TEG) dehydration unit. Residue gas used for molecular sieve regeneration is routed to the TEG dehydration unit. After dehydration, the dry regeneration gas is re-injected into the pipeline to sales.

The TEG dehydration unit consists of a glycol contactor, natural gas fired reboiler, glycol still column, pump gas separator, lean glycol/rich glycol heat exchanger, glycol/gas heat exchanger, glycol filter, two (2) glycol circulation pumps (one is standby), a glycol storage tank, makeup glycol pumps, and associated equipment components. Emissions from the still vent and flash tank are controlled by the glycol reboiler prior to release to atmosphere.

After exiting the dehydration unit, the gas is routed to the cryogenic unit where dry natural gas is separated from the liquid products. The dry natural gas is compressed and sent off-site to sales via pipeline. The liquid products are sent off-site to sales via pipeline.

The operations at the plant are categorized under Standard Industrial Classification (SIC) code 1311, *Crude Petroleum and Natural Gas* and under the North American Industry Classification System (NAICS) code 211111, *Crude Petroleum and Natural Gas Extraction*. The plant operates the following emission sources at the site.
