THE HONORABLE ROBERT NICHOLS
TEXAS SENATE

Regulated Entity Number: RN100219252

Dear Senator Nichols:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) renewal application for a site located in your district. This application is being processed in an expedited manner, as allowed by the commission's rules in 30 Texas Administrative Code, Chapter 101, Subchapter J. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-93.940555,29.970833&level=13>.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

The Honorable Robert Nichols

Indorama Ventures Oxides LLC (Indorama) owns and operates the A3 Unit at the Port Neches Operations facility located in Port Neches, Jefferson County, Texas. The A3 unit is responsible for manufacturing ethylene and propylene using cracking furnaces, compression, and recovery equipment.

The Port Neches Operations facility currently operates under Texas Commission on Environmental Quality (TCEQ) Regulated Entity No. RN100219252 and Customer No. CN605743038. The A3 Unit is currently authorized under New Source Review (NSR) Permit No. 19823 along with various Permits by Rule (PBRs). 2. PROCESS DESCRIPTION

The A3 Unit manufactures ethylene and propylene. Raw materials, primarily ethane and propane, and steam enter nine cracking furnaces. The cracked gas is then compressed and sent to the recovery section. In the recovery section, the material is processed in a series of distillation columns to separate the materials into the products, which are ethylene, propylene, residue gas, C4s, and aromatic distillate. The residue gas is used as fuel gas for the furnaces, heaters, and boilers. The C4s are stored in floating roof tanks which are routed to the C4 facility for further processing. The aromatic distillate is separated and stored for further processing. Unreacted ethane and propane are recycled back to the cracking furnaces.

A3FUG	164604	5/7/2021	Fugitive component counts are recorded, and components are incorporated into the leak detection and repair program as required by the NSR permit. Fugitive components are monitored by Method 21, performed per applicable rules and rule frequency as outlined in the Title V permit Applicable Requirements Summary. Emissions are calculated based on factors listed in the permit application files. For components not in VOC service, weekly AVO rounds are performed. Records of monitoring results are used to estimate emissions and demonstrate compliance with 106.4. These records are stored on site and are available at the request of the commission or other local pollution control program having jurisdiction.
