THE HONORABLE CHARLES SCHWERTNER  
TEXAS SENATE  
PO BOX 12068  
AUSTIN TX 78711-2068

Re: Accepted Federal Operating Permit Initial Issuance Application  
Project Number: 39687  
Permit Number: O4888

Lone Star Power Station  
Cleveland, San Jacinto County  
Regulated Entity Number: RN112189576  
Customer Reference Number: CN603282054

Dear Senator Schwertner:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) initial issuance application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-95.0157,30.4148&level=13>.

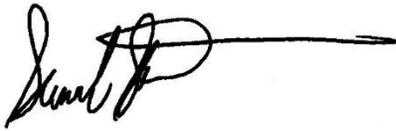

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

## 3. Process Description and Process Flow Diagram

---

This section includes a process description and process flow diagram for Lone Star Power Station.

### Process Description

---

Lone Star Power Station is a natural gas-fired simple cycle power generation unit located in San Jacinto County. The primary source of criteria pollutants is one natural gas-fired combustion turbine (CTG). Lone Star Power Station's net electrical generation is a nominal 450 megawatts (MW) of electricity.

The CTG is equipped with dry low nitrogen oxide (NO<sub>x</sub>) combustion systems to control NO<sub>x</sub> emissions and is fired exclusively with pipeline-quality natural gas which minimizes emissions of volatile organic compounds (VOCs), particulate matter, and sulfur dioxide. The turbine is also equipped with selective catalytic reduction (SCR) for control of NO<sub>x</sub>, and an oxidation catalyst to minimize carbon monoxide (CO) and VOC emissions.

Other emission sources include lube oil vents, a dewpoint heater, an emergency diesel generator, an emergency diesel fire water pump, diesel tanks, natural gas condensate tanks, piping fugitives, and maintenance, startup, and shutdown (MSS) activities.
