Good afternoon, Caleb,

Project 39753 has gone through QA/QC and this deficiency surfaced which needs additional information/clarification:

- On Form PBRSUP, Page 1, Table A, 135755 is provided as a PBR registration number. 135755 is not a PBR registration number, it is a Standard Permit registration number. Kindly remove the entries on Page 1, Table A and list the PBRs on Page 2, Table B with their effective version dates. Also, update Page 4, Table D with the effective version dates.

Based on the responses to the above items, you may need to update Forms OP-PBRSUP

Please provide your response at your earliest opportunity, but no later than **May 19, 2026**.

Thank you for your cooperation.

Subject: RE: STEERS Help for Permit O4895

Good afternoon, Caleb,

Are you attempting to submit a Title V application for an Existing Permit? I believe you are receiving the error message because you are attempting to submit an application for an existing permit. You should submit a "Title V application for a New Permit" since the project is an initial application; technically the permit is not "existing" until after it is issued.

After creating the Title V application for a new permit, and confirming the permit/company, and contact information, you will be able to document the application as an update to an existing project on the Title V General Information Screen and will be able to select your project number.

I am referring you to our STEERS guidance on how to submit an update to a project for an initial application. [TCEQ RG-531c - A Guide to Obtaining Title V Permits in STEERS ePermits](#)

Please let me know if you have any other questions.

Sincerely,

Idowu Ologeh

Hi Idowu,

We went through your feedback on the application of Permit O4895 (Project 39753) and made updates to the OP-UA2 and OP-UA12 forms accordingly (see attached). However, when trying to submit this update into Title V STEERS, I received this error message: "The renewal date of the permit has the default date. Please contact the program area for assistance."

I tried calling the TCEQ's STEERS helpline for assistance a few times but haven't received any response. Is there any chance you can help us out with this?

Thanks,

Apologies for missing that Mr. Ologeh,

Attached you will find updates to the UA2 and UA12 to complete the responses and we agree that the negative applicability on the UA2 for Group IDs GRP-ENG, GRP-GEN and Unit ID GEN-3, MACT ZZZZ can be removed from the OP-REQ2.

We will upload the updated forms to STEERS and certify electronically unless you have any other comments or questions on the technical review for this project.

Thank you for your review on this project and let us know if you have any other comments or questions.

Good Afternoon Mr. Ologeh,

Thank you for your review and the WDP and appreciate you for bearing with me.

The working draft permit looks great and we have no comments.

I don't think we saw any other technical review questions on this project so we'll keep an eye out for the public notice package next unless there are any other technical review issues that arise in the meantime.

Thank you,
James

Subject: Technical Review & Working Draft Permit -- FOP O4895/Project 39753, Trans-Pecos Pipeline, LLC/ Waha Header Compressor Station

Good afternoon, Mr. VanAssche,

I have conducted a technical review of the initial application for Trans-Pecos Pipeline, LLC/ Waha Header Compressor Station. An electronic copy of the Working Draft Permit (WDP) is attached for your review. This WDP contains the TCEQ determination of applicable requirements based on the information submitted in your application, and any updates provided.

Please review the WDP and submit to me any comments you have on the working draft permit by **April 21, 2026**.

During the technical review, the following items surfaced which need additional information/clarification:

- For Unit ID FUG on Form OP-UA12, Table 19e, for NSPS OOOOa applicability, the unit attributes entered were incomplete based on the form instructions. Using data interpretation, code “No” was entered in the last column “Subject to another regulation”. Kindly confirm if this is the right code.
- For Unit ID FUG on Form OP-UA12, OP-SUM Table 1, no preconstruction authorization (PCA) category and authorization/registration number was provided. Kindly provide this information and update Form OP-UA12, OP-SUM Table 1.
- For Group IDs GRP-ENG, GRP-GEN and Unit ID GEN-3, MACT ZZZZ non-applicability was documented on Form OP-REQ2 but unit attributes were provided on Form OP-UA2 which led to applicable requirements being documented in the draft permit for MACT ZZZZ. Additionally, the negative applicability reason provided on Form OP-REQ2 stated these units were complying with another rule to comply with MACT ZZZZ. In this case, MACT ZZZZ is still applicable to the units and they have not been granted the requested permit shields on Form OP-REQ2 for MACT ZZZZ.

Please submit a written response by this deadline, even if you are not making any comments on the content of the WDP.

Please review the second portion of the “SOP Technical Review Fact Sheet” located at http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_wdp_facsheet.pdf. This guidance contains important information regarding WDP review and comment procedures.

Note that a Certification by Responsible Official (Form OP-CRO1) for any uncertified application information, including application updates supporting the WDP comments, is required. After final review of the WDP, additional changes supported by application updates may require certification. I will advise you of these changes at a later date. Prior to transmittal of the Public Notice/Announcement Authorization Package, a duly signed

OP-CRO1 form may be required which includes the specific dates or time-period of all submitted application documentation that was not previously certified. I will advise you of this requirement prior to sending the Public Notice/Announcement Authorization.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Please notify me when these updates have been submitted.

As required on Form OP-1, question IV.D, please remember the FOP application and all application updates must be submitted to EPA Region 6 at R6AirPermitsTX@epa.gov and to the TCEQ regional office having jurisdiction. This submittal information can be found on our website at [Where to Submit FOP Applications and Permit-Related Documents](#).

Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Thank you for your cooperation.

Sincerely,

Subject: NOD/RFI - Technical Review -- FOP O4895/Project 39753, Trans-Pecos Pipeline LLC /Waha Header Compressor Station

Good afternoon, Mr. VanAssche,

I have been assigned to the Federal Operating Permit (FOP) initial application of Permit No. O4895 for Trans-Pecos Pipeline LLC , Waha Header Compressor Station. This application has been assigned Project No. 39753. Please address all correspondence pertaining to this permit application, including any updates, to me at the address below, and use both the Permit and Project reference numbers above to facilitate tracking.

In addition, I wanted to let you know that EPA has, on occasion, objected to Title V permits based on the following:

- a. NSR permit and PBR monitoring sufficiency –please refer to our periodic monitoring guidance for reference of monitoring that EPA has, so far, considered sufficient.
- b. Reference to confidential business information (CBI) in NSR permits and PBR submittals.
- c. High level terms in the SOP Applicable Requirement Summary Table. The high level terms are sometimes used in SOPs when unit attribute forms have not yet been updated due to regulatory amendments.
- d. Accuracy of PBR information provided on the supplemental table and in the permit – please refer to Forms OP-PBRSUP and OP-REQ1 Instructions.

If you have any questions or concerns on any of these items or think you need to do any additional updates, let me know and we can discuss further.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Please notify me when these updates have been submitted.

As required on Form OP-1, question IV.D, please remember the FOP application and all application updates must be submitted to EPA Region 6 at R6AirPermitsTX@epa.gov and to the TCEQ regional office having jurisdiction. This submittal information can be found on our website at [Where to Submit FOP Applications and Permit-Related Documents](#).

Please review the "SOP Technical Review Fact Sheet" located at http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_wdp_factsheet.pdf. Regulated Entity Number: RN108761339

Dear Senator Blanco:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) initial issuance application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-103.095872,31.274161&level=13>.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

3. Process Description

Pipeline-quality lean natural gas enters the Station through one of several metering points and flows through an inlet separator, where any entrained liquids are removed from the gas stream by gravitational forces. The gas stream is routed to the fourteen (14) compressors (Facility Identification Numbers [FINs]: CR-201 through CR-214) to be pressurized to higher pressure before the gas is sent off-site via two transmission pipelines. The fourteen compressor engines are dual-drive units, which are units that can operate on either natural gas fuel or electricity.

Since the inlet natural gas is of pipeline quality, little to no liquid is collected at the separator. Any liquid that does form is produced water and is sent to and stored in a 300-barrel condensate tank (FIN: T-3001). This tank also stores liquids drained from compressor engine scrubber dumps. All liquid is removed from this tank via an on-site truck loading facility (FIN: LL-1). The Station also has two 2,500-gallon sump tanks, one to collect used engine oil (FIN: T-3006) and another to collect liquids from open drains (FIN: T-3005); one 200-barrel tank for new engine oil (FIN: T-3002); and one 300-barrel

slop-oil tank (FIN: T-3000) that is used to store oil and water collected in the slop-oil sump. Liquids from the slop-oil tank and used oil sump tank are removed from the Station through on-site truck loading facilities (FINs: LL-2 and LL-3, respectively).

Other emissions at the Station are emissions from three (3) emergency generator engines (FINs: GEN-1, GEN-2 [diesel-fired], and GEN-3 [natural-gas fired]) which provide power to the Station if purchase power is lost, and fugitive emissions from piping components (FIN: FUG) throughout the Station. Emissions also occur from various maintenance, start-up, and shut-down activities (FIN: MSS), which are authorized under 30 TAC §106.359.

The area map (Figure 1) is included in Attachment 1. The plot plan (Figure 2) depicting the Station's layout is included in Attachment 2. The simplified process flow diagram (Figure 3) depicting the operations described above is included in Attachment 3.
