Regulated Entity Number: RN100219310  
Customer Reference Number: CN600127468

Dear Senator Alvarado:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) initial issuance application for a site located in your district. This application is being processed in an expedited manner, as allowed by the commission's rules in 30 Texas Administrative Code, Chapter 101, Subchapter J. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-95.255,29.722222&level=13>.

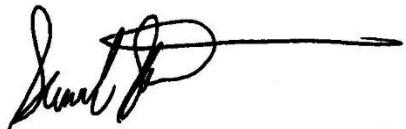

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

*RE: Application for Initial Title V Permit*

*Valero Refining – Texas, L.P.*

*Valero Houston Refinery*

*CN600127468/RN100219310*

Dear APIRT:

On behalf of Valero Refining – Texas, L.P. (Valero), Trinity Consultants has prepared this application for an initial Title V Site Operating Permit (SOP) for the Valero Houston Refinery in Harris County, TX.

The Valero Houston Refinery currently operates under SOP Permit No. O1381, with an issuance date of May 12, 2021. Following the permit issuance, the renewal permit has been subject to ongoing EPA objection based on public petitions for more than 4 ½ years of the permit's express 5-year term. A conservative review may indicate that the 6-month renewal submittal deadline was missed. Per guidance of the TCEQ Title V Section, an initial application is being submitted. The OP-1, OP-ACPS and OP-REQ1 are included in this submittal. Additional Unit Attribute forms and necessary technical forms will be submitted as a follow up to the application.

Valero is requesting to process the initial application as part of the Expedited Permitting Program. Please find the APD-EXP form attached.

If you have any questions or require additional information, please feel free to contact me at 512-639-4191 or [Kelley.Oswalt@trinityconsultants.com](mailto:Kelley.Oswalt@trinityconsultants.com).

Sincerely,

## **1. PROJECT INFORMATION**

---

Valero Refining-Texas, L.P. (Valero) owns and operates the Valero Houston Refinery in Harris County, Texas. Facilities at the site are currently operated under Site Operating Permit (SOP) O1381, with an issuance date of May 12, 2021. Following the permit issuance, the renewal permit has been subject to ongoing EPA objection based on public petitions for more than 4 1/2 years of the permit's express 5-year term. A conservative review may indicate that the 6-month renewal submittal deadline was missed. Per guidance of the TCEQ Title V Section, Valero is applying for an initial SOP with this project.

The basic forms for an initial application are provided in this submittal. Additional Unit Attribute forms and necessary technical forms will be submitted as a follow up to the application.

Date: 02/02/2026	Regulated Entity No.: RN100219310	Permit No.: TBD
Company Name: Valero Refining - Texas, L.P.	Area Name: Valero Houston Refinery	

- Part 1 of this form must be submitted with all initial FOP applications and renewal applications.
- The Responsible Official must use Form OP-CRO1 (Certification by Responsible Official) to certify information contained in this form in accordance with 30 TAC § 122.132(d)(8).

**Part 1**

**A. Compliance Plan — Future Activity Committal Statement**

The *Responsible Official* commits, utilizing reasonable effort, to the following:

As the responsible official it is my intent that all emission units shall continue to be in compliance with all applicable requirements they are currently in compliance with, and all emission units shall be in compliance by the compliance dates with any applicable requirements that become effective during the permit term.

**B. Compliance Certification - Statement for Units in Compliance\***  
(Indicate response by entering an "X" in the appropriate column)

1. With the exception of those emission units listed in the Compliance Schedule section of this form (Part 2, below), and based, at minimum, on the compliance method specified in the associated applicable requirements, are all emission units addressed in this application in compliance with all their respective applicable requirements as identified in this application?	<input checked="" type="checkbox"/> YES <input type="checkbox"/> NO
2. Are there any non-compliance situations addressed in the Compliance Schedule Section of this form (Part 2)?	<input type="checkbox"/> YES <input checked="" type="checkbox"/> NO
3. If the response to Item B.2, above, is "Yes," indicate the total number of Part 2 attachments included in this submittal. (For reference only)	

\* For Site Operating Permits (SOPs), the complete application should be consulted for applicable requirements and their corresponding emission units when assessing compliance status. For General Operating Permits (GOPs), the application documentation, particularly Form OP-REQ1 should be consulted as well as the requirements contained in the appropriate General Permits portion of 30 TAC Chapter 122.

Compliance should be assessed based, at a minimum, on the required monitoring, testing, record keeping, and/or reporting requirements, as appropriate, associated with the applicable requirement in question.

### 3. PROCESS DESCRIPTION

---

The Valero Houston Refinery processes crude oil to produce typical petroleum refinery products such as blended gasoline, diesel, kerosene, etc. The crude oil processed at the refinery is received from off-site via marine facilities, pipeline and/or transport vessels. The key operations of the refinery are described in brief below.

**Crude Combo Unit:** The Crude Combination (Combo) Unit fractionates raw crude and atmospheric reduced crude into distillate and residuum streams utilizing both atmospheric and vacuum distillation processes. The main components of the raw crude stream are separated and either sold directly or sent to other refinery units for additional product recovery. The Crude Combo area also includes a gasoline stabilization and saturates gas gathering operation.

**Fluid Catalytic Cracking Unit (FCCU):** FCCU converts heavy hydrocarbons into more valuable, lighter compounds, including fuel oils, gasoline, and olefin-rich products. The catalytic process permits the cracking reaction to take place at low pressures and temperatures that yields less of the undesirable heavy residual products. The FCCU uses fluidized beds of fine powdered catalyst, which, when aerated, behaves like a liquid. Heat from the combustion of coke raises the temperature of the catalyst to provide much of the heat required for the catalytic reaction. Charge to the unit comes from the Crude Combo Unit and purchased feed.

**Unifiners:** Unifining is a process of eliminating sulfur, nitrogen, and metallic impurities from petroleum distillates by use of pressure, temperature, and hydrogen in the presence of catalyst. The 4 Unifiners (A, B, C and D) are designed to operate with different intermediates as feed depending upon economics and plant operations. The process of each Unifiner is similar.

**Alkylation Operations:** The Alkylation operations consist of the Butadiene Hydrotreater Unit and Alkylation Unit. The Butadiene Hydrotreater maximizes hydrogenation of 1,3-butadiene and minimizes hydrogenation of butenes using a metal catalyst along with hydrogen to complete the reaction. Feed for the Alkylation Unit is treated in the Butadiene Hydrotreater Unit to hydrogenate selectively 1,3-butadiene from a butane rich feed. Alkylate is produced in both the Kellogg and Stratco Reaction sections. The effluent streams from both reactors are treated to remove entrained acids. These streams are fractionated in a double tower operation to yield isobutane, normal butane, and alkylate.

**Ultra-Low Sulfur Diesel (ULSD) Unit:** ULSD unit processes fuel blend components produced by both the Valero Houston and Valero Texas City refineries. The Unit consists of two major reactor sections, the Unicracking reactor and the Union-finishing reactor. The Unicracking reactor hydrocracks Light Cycle Oil into naphtha and lighter products and high-grade diesel. The Union-finishing reactor treats Light Coker Gas Oil from Texas City and straight run diesel from Houston with excess hydrogen to convert organic compounds containing sulfur, nitrogen, and oxygen (if any) to hydrogen sulfide, ammonia, and water.

**Sulfur Recovery Operations:** The Sulfur Recovery Operations consist of the following process units: The Amine Recovery Units, the Sour Water Stripper Units, the 'B' and 'C' Sulfur Recovery Units, and the 'B' and 'C' Tail Gas Treating Units. The Amine Recovery Units removes hydrogen sulfide from the refinery sour gas stream. The 'sweet' gas leaving the Amine Recovery Unit goes to plant fuel gas to off-site processing. The amine acid gases leaving the Amine Recovery Units are fed to the B and C Units, which convert the hydrogen sulfide into elemental sulfur for sale. Treated tail gas is sent to an incinerator/stack for combustion and discharges to atmosphere.

**Product Storage and Loading:** The Refinery contains several storage tanks used to store feedstocks, intermediates and finished products with the Refinery. The Refinery is also equipped with truck, rail, and barge loading activities.

**Utilities:** Coastal Industrial Water Authority Unit: This is designed to reduce temporary hardness and suspended matter from the Refinery's raw water supply. Currently, the primary source of raw water supply to the Refinery is the Trinity River via the Coastal Industrial Water Authority Unit.

**Wastewater Treating Unit:** This unit treats wastewater from the refinery process units and the tank farm so that it is suitable to discharge to the Houston Ship Channel.

**Package Boilers:** The Valero Houston Refinery uses three package boilers to provide steam to furnish high quality steam to the process and pumping areas. Refinery fuel gas is used to fire the package boilers and natural gas is used to light off the burner pilots during start up. The package boilers are equipped with selective reduction system.

**Cooling Towers:** The Valero Houston Refinery' cooling towers provide cooling water to heat exchanger in process units. The cooling towers remove process heat from the cooling water by contacting water with air. Cooling tower blow down is sent to the wastewater treatment unit. Typical water treatment chemicals are added to minimize scale formation and corrosion.

**Flares and Flare Gas Recovery Units:** The Refinery is equipped with two flares to receive non-routine vent streams from process units. Both flares are connected to the Flare Gas Recovery unit, which gathers flare gas, compresses it, removes the hydrogen sulfide, and sends it to the gas balance drum.

**Groundwater Recovery System:** The Valero Refinery conducts remediation of contaminated groundwater via groundwater recovery wells. Petroleum product is pumped out from the wells using air-operated pumps. The removed petroleum is pumped to refinery process equipment.

**Diesel Engines:** The Refinery has several stationary diesel engines used to power equipment, such as instrument air compressors, emergency generators, and fire water pumps.

<b>VIII. Title 40 Code of Federal Regulations Part 63 - National Emission Standards for Hazardous Air Pollutants for Source Categories (continued)</b>		
<b>R. Subpart II - National Emission Standards for Shipbuilding and Ship Repair (Surface Coating)</b>		
1. The application area includes shipbuilding or ship repair operations. <i>If the response to Question VIII.R.1 is "NO," go to Section VIII.S.</i>		<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
2. Shipbuilding or ship repair operations located in the application area are subject to 40 CFR Part 63, Subpart II.		<input type="checkbox"/> Yes <input type="checkbox"/> No
<b>S. Subpart JJ - National Emission Standards for Wood Furniture Manufacturing Operations</b>		
1. The application area includes wood furniture manufacturing operations and/or wood furniture component manufacturing operations. <i>If the response to Question VIII.S.1 is "No" or "N/A," go to Section VIII.T.</i>		<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A
2. The application area meets the definition of an "incidental wood manufacturer" as defined in 40 CFR § 63.801.		<input type="checkbox"/> Yes <input type="checkbox"/> No
<b>T. Subpart KK - National Emission Standards for the Printing and Publishing Industry</b>		
1. The application area includes publication rotogravure, product and packaging rotogravure, or wide-web flexographic printing presses.		<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A
<b>U. Subpart PP - National Emission Standards for Containers</b>		
1. The application area includes containers for which another 40 CFR Part 60, 61, or 63 subpart references the use of 40 CFR Part 63, Subpart PP for the control of air emissions. <i>If the response to Question VIII.U.1 is "NO," go to Section VIII.V.</i>		<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
2. The application area includes containers using Container Level 1 controls.		<input type="checkbox"/> Yes <input type="checkbox"/> No
3. The application area includes containers using Container Level 2 controls.		<input type="checkbox"/> Yes <input type="checkbox"/> No

4. The application area includes containers using Container Level 3 controls.		<input type="checkbox"/> Yes <input type="checkbox"/> No
<b>V. Subpart RR - National Emission Standards for Individual Drain Systems</b>		
1. The application area includes individual drain systems for which another 40 CFR Part 60, 61, or 63 subpart references the use of 40 CFR Part 63, Subpart RR for the control of air emissions.		<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
<b>W. Subpart YY - National Emission Standards for Hazardous Air Pollutants for Source Categories - Generic Maximum Achievable Control Technology Standards</b>		
1. The application area includes an acetal resins production process unit; an acrylic and modacrylic fiber production process unit complying with 40 CFR § 63.1103(b)(3)(i); or an existing polycarbonate production process.		<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
2. The application area includes process wastewater streams generated from an acetal resins production process unit; an acrylic and modacrylic fiber production process unit complying with 40 CFR § 63.1103(b)(3)(i); or an existing polycarbonate production process. <i>If the responses to Questions VIII.W.1 and VIII.W.2 are both "No," go to Question VIII.W.20.</i>		<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
3. The application area includes process wastewater streams that are designated as Group 1 or are determined to be Group 1 under the requirements of 40 CFR § 63.132(c).		<input type="checkbox"/> Yes <input type="checkbox"/> No
4. The application area includes process wastewater streams that are determined to be Group 2 under the requirements of 40 CFR § 63.132(c).		<input type="checkbox"/> Yes <input type="checkbox"/> No
5. All Group 1 wastewater streams at the site are determined to have a total source mass flow rate of less than 1 MG/yr.		<input type="checkbox"/> Yes <input type="checkbox"/> No
6. The site has untreated and/or partially treated Group 1 wastewater streams demonstrated to have a total source mass flow rate of less than 1 MG/yr. <i>If the response to Question VIII.W.6 is "No," go to Question VIII.W.8.</i>		<input type="checkbox"/> Yes <input type="checkbox"/> No
