Subject: RE: Technical Review -- FOP O4281/Project 39792, Fort Dearborn Company/Fort Dearborn Company

Good morning Jesus,

I have a follow up item that needs clarification and would like to verify if the OP-1 Section VIII, Question C was filled out correctly. Currently, the application is answered with 'NA' for the question 'Has the applicant paid emissions fees for the most recent agency fiscal year.' If the answer is 'NA' or 'NO', the applicant is required to contact the Industrial Emissions Assessment Section at (512) 239-1459. For further information regarding inspection fees and emission fees, please refer to 30 TAC §§ 101.24 and 101.27. If the answer is 'YES' and emission fees have been paid for the most recent agency fiscal year, please submit an updated Form OP-1 with VIII.C. updated.

Please provide the updated information by **June 16, 2026**.

Please let me know if you have any questions.

Thank you!

Sincerely,

Jennifer Oakley

Hi Jesus,

The project was advanced to QAQC review and there is an item that needs additional information and clarification.

Form OP-REQ1

- Page 86 part XII B question 1 was answered 'Yes' for the area including an Air Quality Standard Permit NSR authorization. Currently, there is no standard permit associated with this permit. Please update and re-submit Page 86 Part XII B of Form OP-REQ1 to update the standard permit information for the site. This will remove permit term 8 from the WDP.

Please provide the requested information at your earliest opportunity, but no later than **May 19, 2026**.

If you have any questions, please feel free to contact me.

Dear Mr. Hernandez,

I have conducted a technical review of the renewal application for Fort Dearborn Company, Fort Dearborn Company. An electronic copy of the Working Draft Permit (WDP) is attached for your review. This WDP contains the TCEQ determination of applicable requirements based on the information submitted in your application, and any updates provided.

Please review the WDP and submit to me any comments you have on the working draft permit by **April 20, 2026**. Below are comments with regards to the technical review response received by TCEQ via STEERS on March 31, 2026.

TCEQ will not add the Major NSR Summary Table from the application to the permit as requested by the applicant on March 31, 2026 due to it being submitted by mistake and confirmation that the site does not require an NNSR permit.

The response on March 31, 2026 did not include an updated Form OP-REQ3.

- Table 2b listed units PRO-PRESS21 and PRO-PRESS22 for deletion but these units are being added in Tables 1a and b. Please revise Table 2b: Deletions to reflect the units PRO-PRESS14 and PRO-PRESS15 being deleted.

Form OP-PBRSUP Tables B and D

- For claimed PBRs 106.227, 106.265 and 106.371 the 'Version No./Date' is updated in the WDP to reflect the dates submitted in Form OP-PBRSUP Tables B and D (updated to 09/04/2000 from 03/14/1997).

Please submit a written response by this deadline, even if you are not making any comments on the content of the WDP.

Please review the second portion of the "SOP Technical Review Fact Sheet" located at http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_wdp_factsheet.pdf. This guidance contains important information regarding WDP review and comment procedures.

Note that a Certification by Responsible Official (Form OP-CRO1) for any uncertified application information, including application updates supporting the WDP comments, is required. After final review of the WDP, additional changes supported by application updates may require certification. I will advise you of these changes at a later date. Prior to transmittal of the Public Notice/Announcement Authorization Package, a duly signed OP-CRO1 form may be required which includes the specific dates

or time-period of all submitted application documentation that was not previously certified. I will advise you of this requirement prior to sending the Public Notice/Announcement Authorization.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Please notify me when these updates have been submitted.

As required on Form OP-1, question IV.D, please remember the FOP application and all application updates must be submitted to EPA Region 6 at R6AirPermitsTX@epa.gov and to the TCEQ regional office having jurisdiction. This submittal information can be found on our website at [Where to Submit FOP Applications and Permit-Related Documents](#).

Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Thank you for your cooperation.

Sincerely,

Jennifer Oakley

Subject: RE: Technical Review -- FOP O4281/Project 39792, Fort Dearborn Company/Fort Dearborn Company

Dear Mr. Hernandez:

I have conducted a technical review of the renewal application for Fort Dearborn Company, Fort Dearborn Company (Project 39792, Permit O4281).

During the technical review, the following items surfaced which need additional information/clarification:

Major NSR Summary Table

- In the cover letter it is stated that the facility is a major source for VOC with respect to Nonattainment NSR (NNSR). However, there is no associated NNSR permit for this site. Please clarify if the site requires a NNSR permit as it will determine if a Major NSR Summary table is required for this project.

Form OP-PBR SUP

- Include PBRs 106.418, 106.183 listed on Table A on Table D. Please submit Form OP-PBR SUP with all PBRs listed from Tables A and B added to Table D and add a revised date on each table.

Form OP-REQ3

- Table 2b listed units PRO-PRESS21 and PRO-PRESS22 for deletion but these units are being added in Tables 1a and b. Please revise Table 2b: Deletions to reflect the units PRO-PRESS14 and PRO-PRESS15 being deleted.

Please provide the requested information at your earliest opportunity, but no later than **April 1, 2026**.

Note that a Certification by Responsible Official (Form OP-CRO1) for any uncertified application updates is required to be submitted. Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Subject: Technical Review -- FOP O4281/Project 39792, Fort Dearborn Company/Fort Dearborn Company

Dear Mr. Hernandez:

I have been assigned to the Federal Operating Permit (FOP) renewal application of Permit No. O4281 for Fort Dearborn Company, Fort Dearborn Company. This application has been assigned Project No. 39792. Please address all correspondence pertaining to this permit application, including any updates, to me at the address below, and use both

the Permit and Project reference numbers above to facilitate tracking.

In addition, I wanted to let you know that EPA has, on occasion, objected to Title V permits based on the following:

- a. NSR permit and PBR monitoring sufficiency –please refer to our periodic monitoring guidance for reference of monitoring that EPA has, so far, considered sufficient.
- b. Reference to confidential business information (CBI) in NSR permits and PBR submittals.
- c. High level terms in the SOP Applicable Requirement Summary Table. The high level terms are sometimes used in SOPs when unit attribute forms have not yet been updated due to regulatory amendments.
- d. Accuracy of PBR information provided on the supplemental table and in the permit – please refer to Forms OP-PBRSUP and OP-REQ1 Instructions. If you have any questions or concerns on any of these items or think you need to do any additional updates, let me know and we can discuss further.

Application updates may now be submitted through Title V STEERS. Any application updates that are submitted by the RO/DAR through STEERS are certified and do not require the submittal of an original signature OP-CRO1. Application updates that are provided through email or physical mail require certification using an original signature OP-CRO1.

Please notify me when these updates have been submitted.

As required on Form OP-1, question IV.D, please remember the FOP application and all application updates must be submitted to EPA Region 6 at R6AirPermitsTX@epa.gov and to the TCEQ regional office having jurisdiction. This submittal information can be found on our website at [Where to Submit FOP Applications and Permit-Related Documents](#).

Please review the “SOP Technical Review Fact Sheet” located at http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_wdp_factsheet.pdf. This guidance contains important information regarding the review process and application update procedures. Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Thank you for your cooperation.

Major NSR Summary Table

- In the cover letter it is stated that the facility is a major source for VOC with respect to Nonattainment NSR (NNSR). However, there is no associated NNSR permit for this site. Please clarify if the site requires a NNSR permit as it will determine if a Major NSR Summary table is required for this project.

The facility at this time does not require an NNSR permit. VOC emissions from the facility have not reached a net increase of 25 tons per year (tpy) via our permit by rule (PBR) actions and therefore have not reached the major modification threshold. The facility only has the potential to emit above the major modification threshold.

Fort Dearborn Company understands that a new application for this permitting will need to be submitted to the TCEQ in the event this happens in the future. We included a Major NSR Summary Table by mistake and are requesting that this be withdrawn from the application as it is not applicable.

Dear Senator Rehmet:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) renewal application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-97.344722,32.825555&level=13>.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

**Re: Application for Title V Site Operating Permit Renewal
Fort Dearborn Company – Fort Worth, Texas
Customer Reference Number: CN600130207
Regulated Entity Number: RN100219344**

Dear Rhyan:

Fort Dearborn Company (Fort Dearborn) hereby submits this Title V renewal application for its Fort Worth printing facility located at 4601 Pylon Street, Fort Worth, Tarrant County, Texas.

The Fort Worth facility's operations consist of six (6) non-heatset offset lithographic printing presses, general plant maintenance activities, and various space heaters. Presses 17 and 18 are authorized by New Source Review (NSR) Permit Number 21320, issued November 3, 2022. Presses 19, 20, 21 and 22 are authorized under Permit by Rule (PBR) §106.418, Registration No. 150788, revised September 4, 2025. The space heaters are authorized under PBR §106.183, Registration No. 148301, issued August 25, 2017.

The facility is located in Tarrant County, which is part of the Dallas-Fort Worth (DFW) nonattainment area. On November 7, 2022, the DFW nonattainment area was redesignated from serious to severe nonattainment for the 2008 8-hour ozone National Ambient Air Quality Standard (NAAQS). As such, the major source thresholds for Nonattainment NSR (NNSR), and therefore Title V, have been lowered to 25 tons per year (tpy) of volatile organic compounds (VOC) or nitrogen oxides (NOx). Potential VOC emissions from the Fort Worth facility are 72.90 tpy; thus, the facility is a major source with respect to NNSR and Title V regulations. A major NSR Summary Table is being included in this application package.

FORT DEARBORN COMPANY

This application is being submitted as required per Title 30 Texas Administrative Code (30 TAC) Rule § 122.241(a) [30 TAC § 122.241(a)] and is being submitted at least six (6) months prior to the expiration date of the current issued permit, as required by 30 TAC Rule § 122.133(2). The timely submittal of this application grants Application Shield to the facility for the period between the submittal deadline and the date final action is taken in response to this renewal application, as stipulated in 30 TAC Rule § 122.133(2).

Application Contents:

This Title V renewal application consists of the following:

- 1) **Cover letter (this document)** with process description, application overview, and emissions summary;
- 2) **Figures (Attachment A)** containing a process flow diagram, area map, and plot plan;
- 3) **Forms (Attachment B)** with the following completed TCEQ forms:

Major NSR Summary Table

Units at the Fort Worth Facility that are specifically identified as off-permit sources in TCEQ guidance documents and forms are not specifically addressed in the SOP application. In addition to off-permit sources, units identified as having no unit-specific applicable state or federal requirements are not addressed in the SOP application. The sources not addressed in the application may still be subject to applicable site-wide requirements; however, these requirements are not codified on a unit-specific basis.

FORT DEARBORN COMPANY

Process Description:

The Fort Dearborn Company Fort Worth facility is a sheet-fed, offset lithographic printing facility utilizing non-heatset inks to produce a variety of printed products. The various parts of the printing process are described below.

Ink Handling

Ink is shipped to the plant and stored in 55 gallon drums. Ink is transferred by pumps to ink fountain trays on each press. Each press has six to eight inker units. The ink is transferred from the ink fountain tray to the roller, then to the plate, and then to the blanket. Any unused ink is manually removed and stored in 55 gallon drums. The drums are periodically picked up by a reclamation company for disposal.

Fountain Solution

The fountain solution is shipped to the plant and stored in totes. The solution is transferred into a tank located near the presses. It is mixed with water and is automatically pumped into the presses. Any waste water/fountain solution blend is emptied into a 55 gallon drum and stored. The drums are periodically sent to a reclamation company for disposal.

Blanket Wash and Cleanup

The presses are equipped with automatic blanket wash systems that dispense cleaning solutions directly onto the blanket rollers and rubber rollers when needed. The automatic system carefully meters the solvent usage to minimize the amount of solvent needed for cleanup. Cleanup can also be accomplished manually or by using blanket towels. During manual cleaning, solvent is placed on reusable rags and the press operator wipes down the blankets and rubber rollers by hand. The soiled rags are placed in covered containers near the press for later pickup by a laundry facility. The reusable rags are cleaned off-site. The blanket towels are received on rollers. When needed, the rollers are placed on the press and the towel is unwound from one roller to another while passing over the press rollers to clean them.

Wash-Up

When changing ink colors, there may be a need for washing up the unit. This is accomplished by using a solvent on a shop towel to hand wash the fountain, then applying the solvent to the rollers while the press is running to distribute the solvent through the roller tray. The solvent is removed during the same process using a tray with a rubber blade, which is mounted to the press, that squeegees the ink and solvent off the rollers. The ink/solvent mixture is stored in 55 gallon drum, which are periodically sent to a reclamation company for disposal.

FORT DEARBORN COMPANY

Printing Process

The presses use a printing process known as “offset lithography.” Offset printing is a commonly used technique whereby the inked image is transferred from a plate to a rubber blanket to the printing surface. When used in combination with the lithographic process, which is based on the repulsion of oil and water, the offset technique employs a flat (planographic) image carrier on which the image to be printed obtains ink from ink rollers, while the non-printing area attracts a water-based film (called "fountain solution"), keeping the non-printing areas ink-free. The sheet fed process feeds pre-cut sheets of coated or uncoated paper one at a time, from a stack into the press, which prints continuously as the paper is fed through. After printing, the sheets can be coated either with overprint varnish or aqueous coating. The sheets then pass through a low temperature drying station which will use infrared lights, hot air or both. After exiting the coating station, the printed/coated sheets will have a very light coverage of offset powder applied to the top of the sheet, which will eliminate the sheets offsetting print from one to another as they stack in the delivery of the press onto a skid. The skid of sheets is then placed in a work in progress (WIP) storage for curing until such time it is ready to be processed in the finishing department.

Finishing

Printed sheets are loaded onto a jogging table where they are shaken until aligned. They are then slid onto an air board in the predetermined quantity and are stacked on a skid to await the cutting process. At the block out cutter the sheets are then cut into strips and placed onto skids to await the finish cut. At the finish cutter the strips are cut down to the individual label bundle and banded. The bundles are sent down a conveyor to the packing area where the bundles are placed in a carton and loaded onto a conveyor which moves the carton to the stacking area where they are placed on a pallet for storage or shipment.

Potential Emissions:

Emissions from the facility consist of VOC and HAP from the printing process and products of natural gas combustion from space heating. The facility-wide estimated VOC and total HAP potential emissions are outlined in Table 1 below.
