Dear Mr. Stone:

Ingleside Ethylene, LLC (Ingleside) is submitting this application to the Texas Commission on Environmental Quality (TCEQ) for renewal and revision of Title V/Federal Operating Permit (FOP) Number O3806 for the Ingleside Ethylene Plant (the Plant) located on the east side of the city of Gregory (adjacent to Ingleside), in San Patricio County. Ingleside is submitting this renewal application in accordance with 30 TAC Chapter 122, more specifically with §122.241. TCEQ last renewed the FOP on November 10, 2021. It has a five-year term, and therefore expires November 10, 2026. This renewal application is being submitted within the required timeframe of six to eighteen months prior to expiration date.

As part of this application, Ingleside is requesting TCEQ add a Permit Shield to the FOP. This requested action constitutes a significant revision per §122.219(c).

This application includes the following attachments:

- **Attachment 1 Site Information** - Overview of Regulatory Applicability and Process Description
- **Attachment 2 Administrative Forms** - TCEQ Forms OP-1, OP-2, and OP-ACPS
- **Attachment 3 Applicability Determination Forms** - TCEQ Forms OP-REQ1 (Area-Wide) and OP-REQ2 (Negative Applicability for Permit Shield)
- **Attachment 4 Permits by Rule Supplemental Table** - TCEQ Form OP-PBRSUP table that provides specific information on Permits by Rule (PBR) previously claimed by the Plant for New Source Review authorization of emissions from various ancillary sources and activities.

To facilitate your review, please note the following:

1. **Ownership Change** - Form OP-1 and the STEERS submittal reflect the new owner, Ingleside Ethylene, LLC (CN604698472), per the ownership change processed by TCEQ earlier this year. There have been no other changes to the FOP since the last renewal.

2. **NSR Permit Date Change** - Form OP-REQ1, in Attachment 3, Items XII.E and H provide the current date for New Source Review (NSR) Permit No. 107530/PSDTX1338/GHGPSDTX40 for which TCEQ issued a certified no-change renewal on 1/26/2024.
3. **No Changes to Major NSR Summary Table** - Changes are not required to the Major New Source Review (NSR) Summary table other than the date change to 1/26/2024.
4. **Additional PBR Registration** - Form OP-2, Table 2 and Form OP-PBRSUP, in Attachments 2 and 4, respectively, indicate the additional PBR authorization via Registration No. 168403 as applicable to Emissions Unit identification number (EU ID No.) CR-FUG.
5. **Permits by Rule (PBR) Supplemental Table** - The Form OP-PBRSUP, in Attachment 4, has been updated to include the additional PBR registration described above and to consolidate other items previously provided with the October 2020 FOP renewal application.
6. **Significant Revision for Permit Shield Requests** - Form OP-REQ2, in Attachment 3, is included to add a Permit Shield documenting negative applicability with respect to 40 CFR Part 60 Subpart VVa (NSPS VVa) for the plant fugitives (EU ID No. CR-FUG) because associated requirements are stipulated in 40 CFR Part 63 Subpart YY (MACT YY, or Ethylene MACT [EMACT]) instead. More specifically, the §63.1100(g)(4)(iii) regulatory overlap provision in the EMACT stipulates the EMACT-affected fugitives need only comply with the EMACT if they are affected under both NSPS VVa and EMACT.
7. **No New Positive Regulatory Applicability Determinations** - A summary of unit-specific regulatory applicability is provided in Attachment 1. Other than the applicability change just above, there is no new positive regulatory applicability reflected in this application.

We would like to thank you in advance for your review of this FOP Renewal/Revision application. If you have any questions regarding the information presented in this letter and attachments, please do not hesitate to contact Ruben Herrera at (361) 776-6355 or Ruben_Herrera@oxy.com, or our air quality consultant on this project, Brian Gunzelman of Tascosa Alliance Company, at (817) 726-6949 or bgunzelman@tas-all.com.

FEDERAL OPERATING PERMIT NO. O3806 RENEWAL AND REVISION APPLICATION

INGLESIDE ETHYLENE PLANT

INGLESIDE ETHYLENE, LLC

The Ingleside Ethylene Plant (the Plant) is located on the east side of the city of Gregory (adjacent to Ingleside), in San Patricio County. The Plant is the application area for the renewal of Title V Federal Operating Permit (FOP) Number O38060. The Plant is owned and operated by Ingleside Ethylene, LLC (Ingleside).

Figure 1-1 is an Area Map showing the location of the Ingleside Plant with respect to the surrounding area. Figure 1-2 is a Plot Plan showing the layout of major equipment and permitted facilities in the Plant.

FOP Number O3806 was last renewed on November 10, 2021. It has a five-year term, and therefore expires November 10, 2026. Ingleside requests the permit be renewed and revised in accordance with this application submittal.

Overview of Regulatory Applicability

The applicable unit specific regulatory requirements (i.e., those that are not area-wide), are summarized as follows for the emissions units and vents/stacks represented in the FOP and as summarized in the FOP Applicable Requirements Summary:

- Abrasive blasting and painting maintenance activities are subject to 30 TAC Chapter 111 §111.111(a)(8)(A) visible emissions/opacity and associated Periodic Monitoring (PMon) requirements.
- A cooling tower is subject to 40 CFR Part 63 Subpart YY (MACT YY or Ethylene MACT [EMACT]). Part 63 Subpart YY is the National Emission Standards for Hazardous Pollutants for Source Categories: Generic Maximum Achievable Control Technology with the applicable specific portion being the Generic MACT II for Ethylene Processes.
- Process vents are subject to EMACT requirements and 30 TAC Chapter 115 Subchapter B Division 2 VOC vent gas requirements. They include the C3/C4 Hydrogenation Regeneration Vent, the Header to Flare, the High Pressure Header to TO (thermal oxidizer), and the Oxygen-Rich Header to TO. The Regeneration Vent is only subject to Chapter 115 but is exempt from control requirements contained in that rule. For the Header to Flare, an Alternate Method of Control (AMOC) for a multi-point ground flare system, in lieu of a typical flare control, was approved in 2016 and is included as an Alternative Requirement in the FOP. The two thermal incinerators (thermal oxidizers) are subject to the FOP Compliance Assurance Monitoring (CAM) requirements.
- A diesel-fired emergency generator engine, three diesel-fired firewater pump engines, and a diesel-fired non-emergency engine, are subject to 40 CFR Part 60 Subpart IIII and/or 40 CFR Part 63 Subpart ZZZZ requirements.
- Fugitive emissions are subject to EMACT requirements. A significant revision included with this renewal/revision application is to add a Permit Shield documenting negative applicability with respect to 40 CFR Part 60 Subpart VVa (NSPS VVa) for the plant fugitives. They are currently reflected in the FOP as subject to NSPS VVa but are subject to EMACT instead due to a regulatory overlap provision in EMACT.
- Loading/unloading operations are subject to EMACT requirements and 30 TAC Chapter 115 Subchapter C Division 1 VOC loading/unloading requirements.

- Storage tanks are subject to EMACT requirements, 40 CFR Part 61 Subpart FF (NESHAP FF) requirements, and 30 TAC Chapter 115 Subchapter B Division 1 VOC requirements. Part 61 Subpart FF is the National Emission Standard for Benzene Waste Operations. Many of the storage tanks are controlled by either of two thermal incinerators as reflected by the FOP CAM requirements.

Process Description

The primary air emissions authorization for the Plant is New Source Review (NSR) and Prevention of Significant Deterioration (PSD) Permit No. 107530/PSDTX1338/GHGPSDTX40.

The Plant produces market grade ethylene that is transported by pipeline as feed material to Occidental Chemical Corporation's adjacent, existing Ingleside Chemical Plant (i.e., vinyl chloride monomer [VCM] plant) or to other markets.

Ethane feed is delivered by pipeline to the Plant, is combined with recycled ethane from the ethylene fractionator, and is superheated with water before being sent to the cracking furnaces. The cracking furnaces are equipped with selective catalytic reduction (SCR) technology for NO_x control. The ethane is fed to five cracking furnaces to heat the ethane to cracking temperature. To reduce coke formation in the cracking furnace tubes, a sulfide material is added continuously to the ethane feed. The concentration of sulfide material in the ethane feed is maintained at low ppm levels. Two chemicals may be used for this purpose, dimethyl disulfide (DMDS) or dimethyl sulfide (DMS). The sulfide chemical is stored in a pressurized tank and truck off-loading of the material is accomplished using vapor balancing with the delivery truck.

Effluent from the cracking furnaces is used to produce high-pressure steam in transfer line exchangers (TLEs) before being quenched in the quench tower. The cracked gas from the TLEs is cooled and partially condensed by direct countercurrent contact with recirculating water in the quench tower. The condensed gasoline and dilution steam, along with quench water, are separated in the bottom section of the quench tower and the non-condensable gas exits the top of the quench column.

The quench tower overhead vapor is sent to the first stage of the steam-driven charge gas compressor where the vapors are compressed in a three stage centrifugal compressor. Acid gases are removed from the charge gas in the third stage compressor discharge. The acid gas removal consists of a three-stage caustic wash tower. Charge gas from the caustic wash tower overhead is chilled in the dryer feed chiller system. Charge gas from the dryer feed chiller system overhead is dried in a molecular sieve drying system.

The vapor from the charge gas dryer is chilled before entering the front-end de-ethanizer. The de-ethanizer tower produces a vapor overhead product with primarily C₂ and lighter content, and a bottoms product that is stripped of ethane and lighter components. Acetylene is removed from the de-ethanizer overhead by selective hydrogenation to ethylene and ethane. The de-ethanizer overhead product is then chilled and sent to the de-methanizer.

The overhead of the de-methanizer consists of methane and hydrogen. This hydrogen-rich vapor from the de-methanizer is processed to separate hydrogen for use in the hydrogenation reactors, and the balance is used as fuel gas. During brief periods when more fuel gas is produced than is required by the furnaces, hydrogen is vented through a hydrogen vent. De-methanizer bottoms are fed to the ethylene fractionator. The ethylene fractionator overhead vapor is condensed as ethylene product that is sent out by pipeline or to the adjacent VCM plant. The ethylene fractionator bottoms are predominantly ethane and this stream is returned to the cracking furnace feed.

The de-ethanizer bottoms product is sent to the de-butanizer to separate the C₃'s and C₄'s from the C₅+ gasoline. The debutanizer bottoms product is sent to C₅ gasoline storage. The de-butanizer overhead product is hydrotreated in the hydrogenation reactor to convert diolefins and olefins into normal propane and butane. The propane/butane mix stream from the hydrogenation reactor is shipped off-site as product.

One of the byproducts of the ethylene plant is a stream called pyrolysis gasoline. This material is sold to petroleum refineries as a gasoline blend stock. The pyrolysis gasoline is loaded into trucks for transportation to refinery customers. The vents from loading these trucks are routed to the thermal oxidizers for VOC control.

A propylene refrigeration system, which utilizes a steam turbine-driven centrifugal compressor, provides refrigeration at four levels of temperature. A binary refrigerant system uses methane and ethylene to provide the coldest level of refrigeration in the plant for cooling and condensing process streams at three additional levels.

Spent caustic from the caustic tower is treated in a wet air oxidizer system to oxidize sulfides and to satisfy other chemical oxidation demands before being discharged to the wastewater treatment plant. A five-cell cooling tower is used to remove the heat from the process by thermal exchange. Low pressure discharges of vent gases from process equipment and storage vessels are collected in dedicated headers. These vents transfer emissions to a thermal oxidizer system to provide emissions control and to generate steam from the waste heat. The two thermal oxidizers are designed to destroy and remove organic materials from the collected vent gases with an efficiency of at least 99.9%. They are supplied with natural gas to ensure complete combustion with minimum production of carbon monoxide.

In addition to the thermal oxidizers, which provide the primary emissions control for vents, a high-pressure flare system provides a means to collect and burn hydrocarbon process streams that have relieved or been drained to the flare headers at a rate or pressure greater than the thermal oxidizers can control. The emergency relief collection and transfer systems discharge to a multi-point low profile, high-pressure ground flare with a staged burner control system. A heat radiation shielding fence minimizes radiation outside the fence and avoids production of a visible flame. Numerous pilots, supplied with natural gas, are provided to ensure that any emergency relief will be ignited.

Process wastewater, contaminated storm water, surface wash down and other wastewaters are collected in process area sumps that pump to wastewater storage tanks. The wastewater storage tanks are vented to the thermal oxidizers. Wastewater from the wastewater storage tanks is sent to the wastewater steam stripper to remove volatile organic compounds prior to treatment in an activated sludge treatment system within the existing VCM Plant.

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Protecting Texas by Reducing and Preventing Pollution

April 22, 2026

THE HONORABLE JUAN HINOJOSA
TEXAS SENATE
PO BOX 12068
AUSTIN TX 78711-2068

Re: Accepted Federal Operating Permit Renewal Application
Project Number: 40068
Permit Number: O3806
Ingleside Ethylene, LLC
Ethylene Plant
Gregory, San Patricio County
Regulated Entity Number: RN100211176
Customer Reference Number: CN604698472

Dear Senator Hinojosa:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) renewal application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-97.244166,27.880833&level=13>.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

The Honorable Juan Hinojosa

Dear Representative Lozano:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) renewal application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-97.244166,27.880833&level=13>.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site.

This letter is being sent to you for information only and no action is required. If you need further information, please contact me at (512) 239-1250.

Sincerely,

A handwritten signature in black ink, appearing to read "Samuel Short", with a long horizontal line extending to the right.
