TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Protecting Texas by Reducing and Preventing Pollution

June 17, 2026

THE HONORABLE CAROL ALVARADO
TEXAS SENATE
PO BOX 12068
AUSTIN TX 78711-2068

Re: Accepted Federal Operating Permit Renewal Application

Dear Senator Alvarado:

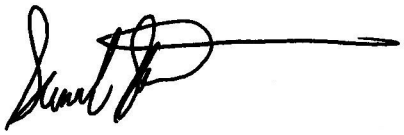
This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) renewal application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. https://gisweb.tceq.texas.gov/LocationMapper/?marker=-95.176111,29.725555&level=13.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

Re: Accepted Federal Operating Permit Renewal Application

This letter is being sent to you for information only and no action is required. If you need further information, please contact me at (512) 239-1250.

Sincerely,



Samuel Short, Deputy Director

1. Introduction

Pasadena Cogeneration L.P. operates Pasadena Cogeneration, which is a power generation facility located in Pasadena, Harris County, Texas. The plant operates three natural gas-fired combined-cycle gas turbine generators, three natural gas-fired auxiliary steam boilers and other auxiliary equipment.

The plant's emission sources are authorized via Texas Commission on Environmental Quality (TCEQ) New Source Review Air Permit No. 37283, Prevention of Significant Deterioration Permit PSD-TX-915, and Non-attainment Permit N015, along with Standard Permit Registration No. 91385 and various unregistered permits by rule (PBR).

The plant operates under Federal Operating Permit (FOP) No. O1797. Pasadena Cogeneration L.P. is submitting the following application for renewal of FOP No. O1797. This renewal application submittal constitutes a timely renewal as it as being submitted at least six months, but no earlier than 18 months, before the date of expiration of the authorization (December 16, 2021) per the requirements in 30 TAC §122.133.

The following documentation is provided with this application: all required TCEQ Federal Operating Permit application forms, including forms addressing application certification, administrative information, site-wide applicability information, and unit attribute information. No changes to the existing Periodic Monitoring are being requested and no additional Periodic Monitoring is required, so no OP-MON forms are being submitted with this renewal application.

2. Process Description

Pasadena Cogeneration is a natural gas-fired combined cycle power generation facility. The primary sources of criteria pollutants associated with the facility are the three gas-fired combustion turbines venting through three HRSG stacks.

The combustion turbines and three auxiliary boilers are fired exclusively with pipeline-quality natural gas which minimizes emissions of volatile organic compounds, particulate matter, and sulfur dioxide.

Emission control systems for the turbines include the use of Selective Catalytic Reduction (SCR) for control of NOx and good combustion practices for abatement of CO and VOCs.

- Part 1 of this form must be submitted with all initial FOP applications and renewal applications.
- The Responsible Official must use Form OP-CRO1 (Certification by Responsible Official) to certify information contained in this form in accordance with 30 TAC § 122.132(d)(8).

Part 1

A.	**Compliance Plan — Future Activity Committal Statement**	
The *Responsible Official* commits, utilizing reasonable effort, to the following: As the responsible official it is my intent that all emission units shall continue to be in compliance with all applicable requirements they are currently in compliance with, and all emission units shall be in compliance by the compliance dates with any applicable requirements that become effective during the permit term.		
B.	**Compliance Certification - Statement for Units in Compliance* (Indicate response by entering an "X" in the appropriate column)**	
1.	With the exception of those emission units listed in the Compliance Schedule section of this form (Part 2, below), and based, at minimum, on the compliance method specified in the associated applicable requirements, are all emission units addressed in this application in compliance with all their respective applicable requirements as identified in this application?	☒ YES ☐ NO
2.	Are there any non-compliance situations addressed in the Compliance Schedule Section of this form (Part 2)?	☐ YES ☒ NO
3.	If the response to Item B.2, above, is "Yes," indicate the total number of Part 2 attachments included in this submittal. *(For reference only)*	
*	*For Site Operating Permits (SOPs), the complete application should be consulted for applicable requirements and their corresponding emission units when assessing compliance status.* *For General Operating Permits (GOPs), the application documentation, particularly Form OP-REQ1 should be consulted as well as the requirements contained in the appropriate General Permits portion of 30 TAC Chapter 122.* *Compliance should be assessed based, at a minimum, on the required monitoring, testing, record keeping, and/or reporting requirements, as appropriate, associated with the applicable requirement in question.*

(1) Emission point identification - either specific equipment designation or emission point number from plot plan.
(2) Specific point source name. For fugitive sources, use area name or fugitive source name.
(3) NO_x - total oxides of nitrogen
CO - carbon monoxide
SO_2 - sulfur dioxide
VOC - volatile organic compounds as defined in Title 30 Texas Administrative Code § 101.1SO_2
PM_{10} - total particulate matter equal to or less than 10 microns in diameter, including $PM_{2.5}$, as represented
$PM_{2.5}$ - total particulate matter equal to or less than 2.5 microns in diameter
NH_3 - ammonia
H_2SO_4 - sulfuric acid
(4) Compliance with annual emission limits (tons per year) is based on a 12 month rolling period.
(5) If the Gas Turbine (EPN CG-1) and any of the auxiliary boilers are fired above 13 MMBtu/hr at the same time, then the combined emissions of the Gas Turbine (EPN CG-1), the auxiliary boilers being fired, and the auxiliary boilers not being fired (above 13 MMBtu/hr) will not exceed the sum of the maximum allowable emissions from EPNs CG-1 and B-1 on a pound per hour or TPY basis.
(6) Maximum allowable CO emission rate at loads greater than 70 percent of the gas turbine's baseload.
(7) Maximum allowable CO emission rate at turndown load (which is 40 to 70 percent of the gas turbine's baseload).
(8) Emission Point Numbers (EPNs) CG-2 and CG-3 underwent Nonattainment New Source Review (NNSR). EPNs CG-1 and B-1 were not subject to NNSR.
(9) For each pollutant whose emissions during planned MSS activities are measured using a CEMS, the MSS lb/hr limits apply only during each clock hour that includes one or more minutes of MSS activities. During all other clock hours, the normal lb/hr limits apply.
(10) Fugitive emissions are an estimate only and should not be considered as a maximum allowable emission rate.
(11) The lb/hr and tpy emission limit specified in the MAERT for this facility includes emissions from the facility during both normal operations and planned MSS activities.
