TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

Protecting Texas by Reducing and Preventing Pollution

June 22, 2026

THE HONORABLE LOIS KOLKHORST
TEXAS SENATE
PO BOX 12068
AUSTIN TX 78711-2068

Re: Accepted Federal Operating Permit Renewal Application
Project Number: 40448
Permit Number: O35
Victoria WLE, L.P.
Victoria Power Station
Victoria, Victoria County
Regulated Entity Number: RN100214980
Customer Reference Number: CN602656548

Dear Senator Kolkhorst:

This letter notifies you that the Texas Commission on Environmental Quality has received a federal operating permit (FOP) renewal application for a site located in your district. As part of this permitting process, the applicant is required to publish a formal newspaper public notice. The notice will inform the public of their right to make comments or request a public hearing. This link to an electronic map of the site or facility's general location is provided as a public courtesy and not part of the application or notice. For exact location, refer to application. <https://gisweb.tceq.texas.gov/LocationMapper/?marker=-97.01,28.788333&level=13>.

The FOP program regulates both new and existing major sources of emissions. The goal of the program is to improve air quality in Texas through increased compliance by codifying existing applicable regulatory requirements into the FOP. The FOP provides the applicant authorization to operate the equipment at the site. The FOP identifies and codifies air emission requirements (known as applicable requirements) that apply to the emission units at the site. The FOP does not authorize construction of emission units or emissions from those units. The New Source Review (NSR) permit is the mechanism for these authorizations.

The Honorable Lois Kolkhorst

2. Process Description

The Victoria Power Station is a combined cycle electrical generating power station. The existing Unit 7 combustion turbine (EPN: VIC7) is a Mitsubishi Heavy Industries M-501F, which is fired with natural gas only. The Unit is also equipped with a natural gas-fired heat recovery steam generator (HRSG) that supplies steam to the steam turbine.

The combustion turbine is currently equipped with selective catalytic reduction (SCR) in combination with Dry Low-NOx (DLN) combustors for the control of NOx emissions. The maximum rated output for the Victoria Power Station CTG is 324 MW.

The unit is equipped with a wet compression system that provides inlet air cooling and increases the density of the air at the intake of the existing CTG. This allows the CTG to operate close to its maximum rated capacity without exceeding it. The wet compression system functions by injecting atomized, demineralized water into the turbine inlet before the compression stage.

The main function of the CTG is to produce shaft power to generate electricity. In the gas turbine, large volumes of air are compressed to a high pressure. The compressed air and fuel are injected into the combustion chamber. Hot gases from the combustion chamber turn the turbine that drives the compressor and the generator before exhausting to the HRSG for steam production. The HRSG uses the hot combustion gas exiting from the CTG to produce steam. Indirect heating of the HRSG feed water produces steam at various pressure levels. The HRSG is supplied with supplementary firing (duct burners) to increase the steam production as required to produce more power. The HRSG duct burners are fired with natural gas only. The steam from the HRSG is then passed through a steam turbine to generate additional electricity.

The CTG has an inlet air filtration system and an evaporative cooler. The inlet air filtration system removes the bulk of the particulate matter (PM) in the inlet air. The filtration improves both long-term compressor efficiency and compressor blade life by reducing erosion and fouling of the CTG inlet air compressor.

Other authorized equipment and activities at the site include a cooling tower, piping component fugitives, emergency generators, miscellaneous storage tanks, and various maintenance, startup, and shut down (MSS) activities. Please refer to Section 4 for a full list of equipment and activities authorized to operate at the site.
