

Sabine and Neches Rivers and
Sabine Lake Bay Expert Science
Team

Sabine and Neches Rivers

- **Activities Completed in June**
 - Reconnaissance of 5 of 12 gages
 - 3 Bed-sediment samples

Sabine and Neches Rivers

- **NOTES**

- **SAM is not the appropriate computational tool for stream that have clay beds**
- **The implementation of Environmental Flow regime is driving force for the geomorphic overlay on both clay and sand bed streams.**

Sabine and Neches Rivers

- **Activities planned for July**
 - Complete Reconnaissance of the remaining 7 gage sites
 - Requesting The USGS field Measurements for 12 gages
- **Activities planned August**
 - Make the required SAM computations
 - Complete write-up on Potential Geomorphic effects of implementation of Environmental Flow regime at the 12 gage sites
