Re: July 2006 Geoprobe Investigation
Former Bell Dry Cleaner Property
11600 Jones Road
Jones Road Superfund Site
Houston, Texas

Dear Ms. Long:

Shaw Environmental, Inc. (Shaw) is pleased to present to the Texas Commission on Environmental Quality (TCEQ) this letter report which summarizes the results of the Geoprobe Investigation conducted at the above-referenced site in July 2006. These activities were performed to support the Feasibility Study being conducted at the site. This letter report provides a summary of the field activities conducted during this investigation and includes a tabulation of the analytical results for both soil and groundwater.

All soil and groundwater samples were collected using a Geoprobe sampling device that utilizes direct push technology (DPT). All soil samples were analyzed by an off-site fixed-based laboratory (Mitkem Corporation) performing under the Contract Laboratory Program (CLP) of the Environmental Protection Agency (EPA). Selected soil samples were also field screened for tetrachloroethene (PCE) by the on-site geologist using the Color Tec method. No dense non-aqueous phase liquid (DNAPL) was observed in soil or groundwater samples collected during this investigation.

Summary of Geoprobe Field Activities

A total of nine borings were installed to a maximum depth of fifty feet below ground surface (bgs) during the week of July 17, 2006. **Figure 1** shows the approximate location of each of these borings. The locations of the borings were selected jointly by Shaw and TCEQ representatives to assess areas of the contaminant of interest (PCE).

Concrete cores were initially cut by a coring company (Cores ETC) at all DPT locations in paved areas (GP-2A through GP-9A). GP-1A located behind the former Bell Dry Cleaner property was installed in the grass, therefore it was not cored. Boring logs for DPT borings GP-1A through GP-8 are presented in **Attachment 1**. DPT boring GP-9A was installed adjacent to GP-8A and was used for the collection of geotechnical samples. As a result, the sample cores collected from GP-9A were submitted directly to a laboratory for analyses and the hole was not logged.

Each DPT boring was continuously logged and sampled to total depth. A four-foot split spoon core barrel with a plastic liner was used to push through each sample interval. The liner was then removed from the split spoon sampler, opened using a special tool designed for this task and then logged and field screened using a calibrated photo ionization detector (PID) for volatile organics by an on-site geologist. **Attachment 2** presents a copy of the field notes prepared by the on-site geologist.

The soil sampling interval selection strategy was based upon previous knowledge of the subsurface lithology at the site obtained through the previous investigation work (Geoprobe 2003 and Cone Penetrometer 2003). The following intervals were proposed for sample collection from each of the DPT borings:

First Soil Zone	15 – 25 feet bgs (based upon PID readings)
Second Soil Zone	25 – 32 feet bgs (base of the saturated zone)
Third Soil Zone	30 – 40 feet bgs (based upon PID readings)
Fourth Soil Zone	Termination of the boring (proposed at approximately 50 feet bgs).

Any deviations from this proposed sampling scenario were based upon field data collected and observed during the DPT activities. Photographs documenting the installation of the geoprobe borings are presented in **Attachment 3**. Photographs depicting representative core samples were not taken during the Geoprobe assessment but were taken the following week during the rotosonic drilling for all sample depths. These photographs will be presented in the subsequent report documenting this second drilling activity once it has been completed.

As required by the Field Sampling Plan (FSP), three Encore samples were collected from each targeted sample zone and sent to the EPA CLP laboratory for VOC analyses using statement of work (SOW) VOA SOM01.1. A sample aliquot from each interval was also collected in a 4 oz jar and submitted to the EPA CLP laboratory for analyses of the moisture content of the soil. In addition, samples were also collected from various sample depths and field screened using the Color Tec method.

Following soil collection at each DPT boring location, slotted PVC pipe was placed into the borehole and a groundwater sample was collected using a dedicated bailer and submitted to the EPA CLP laboratory for VOC analyses. Upon completion of groundwater sampling, the PVC pipe was pulled from each temporary well, grout was then pumped into each borehole and new concrete was added at the surface to patch the cored concrete.

Summary of CLP Analytical, Color Tec, and Geotechnical Results

Soil

The analytical results from the EPA CLP laboratory revealed PCE, trichloroethene (TCE), and *cis*-1,2-dichloroethene (DCE) concentrations in most of the soil samples collected from the DPT borings. Vinyl chloride (VC) was not detected at concentrations at or above the laboratory reported quantitation limit. PCE represents the primary composition of the product discharged by the former dry cleaner operations. VC is a third order degradation by-product of the PCE; its absence in the soil samples provides an indication that degradation of PCE has not been substantially completed in soil. The soil analytical results are summarized in **Table 1** and illustrated on **Figure 2**. Laboratory reports from the CLP laboratory are included in **Attachment 4.**

First Soil Zone (15 – 25 feet bgs)

Detections of PCE were observed in all eight DPT borings with the highest concentrations observed in the first targeted sampling zone (15 – 25 feet bgs). Concentrations ranged from 0.032 parts per million (ppm) in DPT GP-1A at 20 – 22 feet to 620 ppm in DPT GP-3A at 20 – 21 feet. No detectable levels of VC were observed in samples collected from this zone.

Second Soil Zone/Base of Saturated Zone (25 – 32 feet bgs)

Detectable concentrations of PCE were also observed in DPT borings GP-2A, GP-3A, GP-4A, GP-5A, GP-6A, GP-7A, and GP-8A through the second soil zone of interest (base of saturated zone 25 to 32 feet). PCE concentrations ranged from 0.0021 ppm in DPT boring GP-2A at 31 – 33 feet to 3.9 ppm in DPT GP-7A at the interval 25 – 27 feet bgs. No detectable levels of VC were observed in samples collected from this zone.

Third Soil Zone (30 – 40 feet bgs)

In the third soil zone (30 – 40 feet), detections of PCE were observed at DPT locations GP-2A, GP-5A, GP-6A, GP-7A, and GP-8A. Concentrations of PCE ranged from 0.0093 ppm in DPT boring GP-2A at 37 – 38 feet to 1.4 ppm in DPT boring GP-7A at 33 – 35 feet bgs. No detectable levels of VC were observed in samples collected from this zone.

Fourth Soil Zone/Termination of the Boring (46 – 50 feet bgs)

Detectable concentrations of PCE were also observed in DPT borings GP-1A, GP-2A, GP-3A, GP-4A, GP-5A, GP-6A, and GP-7A at the base of these borings (46 – 50 feet bgs). PCE concentrations ranged from 0.0024 ppm in DPT boring GP-5A at 46 – 48 feet to 85 ppm in DPT GP-3A at the interval 49 – 50 feet bgs. No detectable levels of VC were observed in samples collected from this zone.

Color Tec Evaluation

Select soil samples were collected for field analysis using the Color Tec field analysis method concurrent with soil sample collection for chemical analysis under the CLP. The purpose of Color Tec sampling was to aid field selection of sample intervals for the CLP analysis, and to help determine where borings should be installed in the field relative to previously installed borings during the same mobilization. **Table 2** presents a summary of Color Tec screening results for PCE in soil and groundwater.

Shaw conducted an evaluation of the how well the Color Tec sample results correlate to laboratory results of samples submitted for CLP analysis. The evaluation was performed by comparing Color Tec samples collected from the same or similar sample intervals as those submitted for CLP analysis. Results of the comparison were inconclusive, with very little apparent correlation of the results from the two methods. **Table 3** presents the comparison of CLP laboratory results to Color Tec field results.

Geotechnical Analysis

A summary of the laboratory results for the geotechnical analysis can be found in **Table 4** and the report from the geotechnical laboratory is included as **Attachment 5**. The geotechnical results will be used for future treatment studies in the area.

Groundwater

Groundwater samples were collected from eight of the nine DPT borings (GP-1A, GP-2A, GP-3A, GP-4A, GP-5A, GP-6A, GP-7A, and GP-8A) and submitted to the EPA CLP laboratory for VOC analyses. Laboratory analytical results indicated the presence of PCE in groundwater samples taken from all eight DPT borings. PCE concentrations ranged from 34 parts per billion (ppb) in GP-1A to 190,000 ppb in DPT boring GP-3A. Concentrations of VC were detected in only three DPT borings, including 4.9 ppb, 290 ppb, and 920 ppb, in DPT borings GP-1A, GP-5A, and GP-4A, respectively. A summary of the groundwater analytical results is presented in **Table 5** and illustrated on **Figure 3**. Laboratory reports from the CLP laboratory are included in **Attachment 4**.

Color Tec Evaluation

One groundwater sample taken from boring GP-8A was tested in the field using the Color Tec method to evaluate correlation of the results with a groundwater sample submitted for laboratory analysis under the CLP. The indicated PCE concentration using the Color Tec method was 4 ppm, and the CLP laboratory reported a concentration of 3.3 ppm.

Data Quality Evaluation

Quality control samples were collected to asses the quality of field sampling techniques and quality of the selected CLP laboratory analysis. Concentrations of PCE exceeded the laboratory Contract Required Quantitation Limit (CRLQ) in samples F23R7 (Trip Blank 3), F23R8 (Trip Blank 4), and F23S6 (Field Blank 4), at concentrations of 5.9 ppb, 7.3 ppb, and 7.0 ppb, respectively. According to comments/clarifications made by the Environmental Services Assistance Team in their review dated August 18, 2006, page 4, instrument carry-over, internal standard response, high concentrations of PCE in environmental samples that required diluted analysis, and spike recovery resulted in qualification of associated samples to include blank detections. Therefore it can be assumed the detections of PCE in the trip, equipment, and ambient blanks are the result of laboratory contaminations and are not representative of true environmental conditions, especially considering that other organic compounds that were detected in associated environmental samples were not detected in the blanks.

Waste Management

Approximately 3,300 pounds of soil cuttings, purge water, and other investigation-derived waste (IDW) including personal protective equipment (gloves), split-spoon sampler liners, sheet plastic, and disposable bailers were contained in a roll-off box. The waste was generated both during the Geoprobe investigation and a previous Rotosonic drilling investigation. On August 3, 2006, the waste was transported by Bayou City Waste LP at 10234 Lucore Street, Houston, Texas, to the Liquid Environmental Solutions of Texas, LP (LES) facility at 250 Gellhorn Drive, Houston, Texas for disposal. In addition, approximately 250 gallons of purge water contained in 55-gallon drums was transported by Milstead Equipment to the LES facility for disposal on August 4, 2006. Copies of the waste manifests are included in **Attachment 6**.

Conclusions

The following preliminary conclusions can be drawn from an interpretation of the results from the Geoprobe field investigation:

Soil

- Contaminants in the soil matrix throughout the shallow subsurface (upper 35 feet) are primarily composed of PCE.
- No DNAPL was observed during the soil sampling activities.
- The highest concentration of PCE appears to be located in the vicinity of DPT borings GP-2A and GP-3A. These two borings are located outside the back door of the former dry cleaner and were intentionally installed on each side of the storm drain that runs east/west behind the former dry cleaner to Jones Road. This area may represent the primary discharge point of the PCE.
- The highest mass of the contaminant appears to have "accumulated" in upper soil zones and decreases in concentration below the soil/water interface.

Groundwater

- Contaminants in groundwater are primarily PCE; however, the presence of degradation daughter products (TCE, DCE, and VC) is more evident in the groundwater than the soil matrix.
- No DNAPL was observed during the groundwater sampling activities.
- The lateral extent of contaminants of interest is relatively greater in groundwater than the extent observed in the soil matrix.
- Analytical results only show concentrations of VC in three groundwater samples taken from borings GP-1A, GP-4A, and GP-5A. However, due to the high concentrations of PCE, the laboratory had to dilute the groundwater samples significantly to measure the PCE concentrations. As a result of this dilution the concentrations of VC in groundwater samples from the other five borings appear to be not detected, when in reality it is the detection limits that have been increased because of the dilution.

Recommendations

Shaw recommends that the information included in this report be used in concert with a treatment study intended to ultimately remove the source contamination. The information in this report will be useful in supporting the treatment study and potential future pilot studies at the site. Shaw appreciates the opportunity to provide environmental consulting services to the TCEQ. If you have any questions, or need additional information, please contact me at 713-996-4571.

Sincerely,
Shaw Environmental, Inc.

Notes:

PCE	Tetrachloroethene
TCE	Trichloroethene
cis-1,2 DCE	cis-1,2 Dichloroethene
VC	Vinyl Chloride
ppm	Parts per Million
Bold Type	Concentration detected

Laboratory Data Qualifiers:

L	Reported concentration is below the CRQL
J	Estimated value
U	Not detected at reported quantitation limit
M	Reported concentration should be used as a raised quantitation limit because of interferences and/or laboratory contamination
*	Result not recommended for use because of associated QA/QC performance inferior to that from other analysis

CLP ANALYTICAL RESULTS

ENVIRONMENTAL SERVICES ASSISTANCE TEAM

Alion Science and Technology

ESAT Region 6
10625 Fallstone Road
Houston, TX 77099

MEMORANDUM

DATE: August 22, 2006

TO: Marvelyn Humphrey, ESAT PO, Region 6 EPA

FROM: Tseng-Ying Fan, Data Reviewer, ESAT

THRU: Dominic G. Jarecki, ESAT Program Manager, ESAT

SUBJECT: CLP Data Review

Contract No.:	EP-W-06-030
TO No.:	002
Task/Sub-Task:	2-11
ESAT Doc. No.:	6002-211-0055
TDF No.:	6-06-049A
ESAT File No.:	O-0031

Attached is the data review summary for Case # 35524
SDG # F23M4
Site Jones Road Ground Water Plume

COMMENTS:

I. LEVEL OF DATA REVIEW

Standard review was performed for this data package.

II. CONTRACTUAL ASSESSMENT OF THE DATA PACKAGE

The CCS report was unavailable at the time of this report preparation. The hardcopy review detected the contractually noncompliant items below that did not cause result qualification.

A. Sample F23P1 was analyzed one day past the contractual holding time limit (SOM01.1, p. D-20/LOW-MED VOA, sec. 8.4).

B. The data package arrived 4 working days late for the 14-day turnaround requirement.

III. TECHNICAL USABILITY ASSESSMENT OF THE DATA PACKAGE

The total number of sample results reviewed was 1040 for this data package. Some results were qualified because of technical problems, and the significant problems are addressed below.

A. The 1,4-dioxane QL was qualified as unusable for all samples because of extremely poor instrument sensitivity.

B. The VDMC2 recovery was below the QC limit for eight samples.

C. The low level (screen) and medium level (reported) analyses had inconsistent results for samples F23P1 and F23P2.

3.	CALIBRATIONS	M
4.	BLANKS	M
5.	DMC/SURROGATES	M
6.	MATRIX SPIKE/DUPLICATE/LCS	O
7.	OTHER QC	M
8.	INTERNAL STANDARDS	O
9.	COMPOUND ID/QUANTITATION	M
10.	PERFORMANCE/COMPLETENESS	O
11.	OVERALL ASSESSMENT	M

O = Data had no problems.
M = Data qualified because of major or minor problems.
Z = Data unacceptable.
NA = Not applicable.

ACTION ITEMS: The data package arrived 4 working days late for the 14-day turnaround requirement.

AREAS OF CONCERN: Contractual Issue: Sample F23P1 was analyzed one day past the contractual holding time limit. Technical Issues: The 1,4-dioxane QL was qualified as unusable for all samples because of extremely poor instrument sensitivity. Bromoform failed the technical %D calibration criteria. Laboratory contamination caused a raised methylene chloride QL for one sample. The VDMC2 recovery was below the QC limit for eight samples. One field duplicate pair had inconsistent bromoform results. The low level (screen) and medium level (reported) analyses had inconsistent results for samples F23P1 and F23P2.

NOTABLE PERFORMANCE:

COMMENTS/CLARIFICATIONS
REGION 6 CLP QA REVIEW

CASE 35524 **SDG** F23M4 **SITE** Jones Road Ground Water Plume **LAB** MITKEM

COMMENTS: This SDG consisted of 20 soil samples for LMVOA analysis following SOW SOM01.1. The sampler did not designate any sample in the SDG for laboratory QC. Upon contacting the Region, the laboratory performed MS/MSD analyses on samples F23M5 and F23M6 for the low level analysis and medium level analysis, respectively. The RSCC verified that samples F23W4 (SDGF23Q0)/F23W7, F23M6/F23M8, and F23N6/F23R4 were field duplicate pairs. Field blank samples F23M9, F23R5, and F23S5 and trip blank samples F23R3 and F23R7 that were submitted with SDG F23M9 are associated with the samples in this SDG. Samples F23M6, F23N5, F23N6, F23N7, F23P0, F23P1, F23P2, F23P5, and F23R4 were analyzed at the medium level, and the rest of the samples were analyzed at the low level. The data package contained the contractually noncompliant items listed below.

- Sample F23P1 was analyzed one day past the contractual holding time limit.

- The data package arrived 4 working days late for the 14-day turnaround requirement.

Standard review was performed for this package as requested by the TDF. The compounds of concern and the user's desired detection limits are listed below.

Compound	Desired DL (ug/kg) Low Level Sample	Desired DL (ug/kg) Med. Level Sample
vinyl chloride	9	250
cis-1,2-dichloroethene	5	250
trans-1,2-dichloroethene	5	250
tetrachloroethene	5	250

The soil sample QL's require correction for moisture content and sample weight per the SOW. The corrected QL's were reported by the laboratory and are referred to as Sample Quantitation Limits (SQL's) in this report. The laboratory demonstrated instrument sensitivity at the user's desired detection limits, but the reported SQL's were elevated above the user's desired detection limits for most samples because of moisture correction. Compounds of concern reported at concentrations above the user's desired detection limits are cis-1,2-dichloroethene and/or tetrachloroethene in eight low level and eight medium level samples. The 1,4-dioxane QL was unusable for all samples because of very poor instrument sensitivity. The VDMC2 recovery was below the QC limit for eight samples. The low level (screen) and medium level (reported) analyses had inconsistent results for samples F23P1 and F23P2.

Some results were qualified for all samples because of problems with calibration, laboratory contamination, DMC recovery, and inconsistent field duplicate/laboratory results. The technical usability of all reported results is indicated by ESAT's final data qualifiers in the Data Summary Table (DST). An Evidence Audit was conducted for the Complete Sample Delivery Group File

(CSF), and the audit results were reported on the Evidence Inventory Checklist.

Acceptable	=	No results were qualified for any problem associated with this QC parameter.
Provisional	=	Some results were qualified because of problems associated with this QC parameter.
Unusable	=	All results are unusable because of major problems associated with this QC parameter.

1. Holding Times: Acceptable. Sample F23P1 was analyzed one day past the contractual holding time limit. The rest of the samples met contractual holding time criteria. Since all samples met the technical holding time criteria, result qualification was not required.

2. Tuning/Performance: Acceptable. The BFB analyses met GC/MS tuning criteria.

3. Calibrations: Provisional. The target compounds met contractual calibration criteria. The 1,4-dioxane QL was qualified as unusable for all samples because 1,4-dioxane did not meet the technical minimum RRF criteria for all calibrations. Bromoform failed the technical %D criteria for several CCV's, so the reviewer qualified the bromoform results as estimated for associated samples F23M4, F23M5, F23M7, F23M8, F23P1, and F23P5. Two compounds failed technical %RSD criteria but were not detected in the associated samples, so result qualification was not required.

4. Blanks: Provisional. The method and storage blanks were contractually acceptable. Methylene chloride was detected at a concentration slightly above the CRQL in one low level method blank, and tetrachloroethene was detected at a concentration below the CRQL in one medium level method blank. The effects of the laboratory contamination are summarized below.

- The methylene chloride result above the SQL for sample F23M5 was qualified as undetected ("U"), and the reported concentration should be used as a raised QL ("M").

- The laboratory "B"-flagged results below the SQL's should be considered as undetected and were flagged "U" at the SQL's on the DST.

Field/Trip Blanks: The field blanks and trip blank sample F23R3 were free of contaminant. Trip blank sample F23R7 contained tetrachloroethene at a concentration slightly above the CRQL, and this contaminant was also detected at a similar level in associated samples F23W6 and F23W7. The reviewer was unable to accurately flag the results for shipping contamination because the trip blank and the samples (soil) have different matrices.

5. Deuterated Monitoring Compounds (DMC=s)/Surrogates: Provisional. The DMC performance met contractual criteria although 8 low level samples had up to 2 DMC recoveries above the QC limits and 10 medium level samples had a VDMC2 recovery below the QC limit. The high DMC recoveries did not result in data qualification because the associated analytes were not detected in the samples. The low VDMC2 recovery did not impact the data for samples F23M6 MS/MSD. The reviewer qualified the results as estimated for dichlorodifluoromethane, chloromethane, bromomethane, chloroethane, and carbon disulfide for the following samples because of low VDMC2 recoveries: F23M6, F23N5, F23N6, F23N7, F23P0, F23P2, F23P5, and F23R4.

6. Matrix Spike/Matrix Spike Duplicate (MS/MSD)/Laboratory Control Sample (LCS): Acceptable. The MS/MSD results met QC guidelines for precision and %recovery.

7. Other QC:

Field Duplicates: Provisional. Field duplicate results were consistent with one exception. Bromoform was reported at a concentration close to 3X SQL for sample F23W4 (SDG F23Q0) but was not detected in the corresponding field duplicate sample F23W7, so the reviewer qualified the bromoform result as estimated for sample F23W7 in this SDG.

8. Internal Standards (IS): Acceptable. IS performance was acceptable for all analyses.

9. Compound Identity/Quantitation: Provisional. Compounds detected at concentrations above the SQL's were cis-1,2-dichloroethene, trichloroethene, tetrachloroethene, bromoform, and/or laboratory contaminant methylene chloride.

Based on the low level analysis results, the analyst performed medium level analysis on nine of the samples and reported the results although the medium level analysis of samples F23P1 and F23P2 did not repeat the very high target compound concentrations found in the low level analyses. The reviewer, therefore, qualified the cis-1,2-dichloroethene and tetrachloroethene results for sample F23P1 and the tetrachloroethene result for sample F23P2 because of this inconsistency. No other compound ID or quantitation problem was detected.

10. Performance/Completeness: Acceptable. The data package was complete. The laboratory was contacted for some reporting discrepancies (see Resubmission Report). The DST included in this report is the final version.

11. Overall Assessment: Some results were qualified for all samples because of problems with calibration, laboratory contamination, DMC recovery, and inconsistent field duplicate/laboratory results.

HEADER DEFINITIONS FOR ORGANIC EXCEL DST

CASE: Case Number

SDG: SDG Number

EPASAMP: EPA Sample Number

LABID: Laboratory File/Sample ID

MATRIX: Sample Matrix

ANDATE: Sample Analysis Date

ANTIME: Sample Analysis Time

CASNUM: Compound CAS Number

ANALYTE: Compound Name

CONC: Compound Concentration

VALDQAL: Region 6 Organic Data Validation Qualifier (see Organic Data Qualifier Definitions on the next page)

UNITS: Concentration Units

ADJCRQL: Adjusted Contract Required Quantitation Limit Value

SMPDATE: Sampling Date

STATLOC: Station Location

Disclaimer: ESAT verified the accuracy of the information reported in the Excel DST only for the following data fields: CASE, SDG, EPASAMP, MATRIX, ANALYTE, CONC, UNITS, VALDQAL, and ADJCRQL. The data qualifiers in the VALDQAL column indicate the technical usability of the reported results.

ORGANIC DATA QUALIFIER DEFINITIONS

The following definitions provide brief explanations of the ESAT-Region 6 qualifiers assigned to results in the Data Summary Table.

U Not detected at reported quantitation limit.

N Identification is tentative.

J Estimated value.

L Reported concentration is below the CRQL.

M Reported concentration should be used as a raised quantitation limit because of interferences and/or laboratory contamination.

R Unusable.

ϖ High biased. Actual concentration may be lower than the concentration reported.

ω Low biased. Actual concentration may be higher than the concentration reported.

F+ A false positive exists.

F- A false negative exists.

UJ Estimated quantitation limit.

T Identification is questionable because of absence of other commonly coexisting pesticides.

C Identification of pesticide or aroclor has been confirmed by Gas Chromatography/Mass Spectrometer (GC/MS).

X Identification of pesticide or aroclor could not be confirmed by GC/MS when attempted.

***** Result not recommended for use because of associated QA/QC performance inferior to that from other analysis.

Resubmission Request

Laboratory Name:	MITKEM
Lab Contact:	Agnes Ng
Region:	6
Regional Contact:	Mahmoud El-Feky - EPA
ESAT Reviewer:	Tseng-Ying Fan

In reference to data for the TVOA fraction:

Summary of Questions/Issues:

1. Please resubmit the SDG Narrative to address the issues listed below.

   - Documentation of the deviation from the contract where m/z 100 was used as the quantitation ion for VDMC3, 1,1-dichloroethene-d2 (SOM01.1, p. D-42/LOW-MED VOA, sec. 11.2.1.7).

   - Documentation of how soil samples for volatiles analysis were handled upon receipt (e.g., storage in refrigerator, transferred to closed-system vials and frozen, etc.)[SOM01.1, p. B-12, sec. 2.5.1].

2. Form III for the low level analysis (p. 13): The spike concentration for the MSD analysis should be 52.84 based on a 5.7-gram sample size and 17% moisture content. Please correct and resubmit p. 13.

3. Sample F23R4: The data for chloroethane-d5, 2-butanone, and trichloroethene were omitted from the quantitation report (p. 237). Please correct the omissions and resubmit p. 237.

NOTE: Any laboratory resubmission should be submitted either as an addendum to the original CSF with a revised Form DC-2 or submitted as a new CSF with a new Form DC-2 except for replacement pages (SOM01.1, p. B-33, sec. 2.6.3). Custody seals are required for all such shipments. Please respond to the above items **within 7 days** by e-mail to El-Feky.Mahmoud@epamail.epa.gov and by regular mail to:

Mr. Mahmoud El-Feky
U.S. EPA Region 6 Laboratory
10625 Fallstone Road
Houston, TX 77099

If you have any questions, please contact Mr. El-Feky at (281) 983-2128.

Distribution: (1) Lab Copy, (2) Region Copy, and (3) ESAT Copy

MEMORANDUM

DATE: August 18, 2006

TO: Marvelyn Humphrey, ESAT PO, Region 6 EPA

FROM: Michael J. Fertitta, Data Reviewer, ESAT

THRU: Dominic G. Jarecki, ESAT Program Manager, ESAT

SUBJECT: CLP Data Review

Contract No.:	EP-W-06-030
TO No.:	002
Task/Sub-Task:	2-11
ESAT Doc. No.:	6002-211-0054
TDF No.:	6-06-048A
ESAT File No.:	O-0030

Attached is the data review summary for Case # 35524
SDG # F23M9
Site Jones Road Ground Water Plume

COMMENTS:

I. LEVEL OF DATA REVIEW

Standard data review was performed for this data package.

II. CONTRACTUAL ASSESSMENT OF THE DATA PACKAGE

The CCS report was not available when this data review report was prepared. Hardcopy review detected the following contractually noncompliant items.

A. Sample F23Q4 failed contractual criteria for IS response (SOM01.1, D-45/LOW-MED VOA, 11.3.5), but the undiluted sample was not reanalyzed to demonstrate the potential matrix effect (SOM01.1, D-47/LOW-MED VOA, 11.4.3.2). The quantitation limit was unusable for compounds associated with IS1 for sample F23Q4, so the 2000X higher quantitation limit from the diluted reanalysis had to be used for 12 undetected analytes. Six detected compound results were qualified as estimated for sample F23Q4.

B. Sample F23Q9 failed contractual criteria for DMC performance (SOM01.1, D-45/LOW-MED VOA, 11.3.4), but the undiluted sample was not reanalyzed to demonstrate the potential matrix effect (SOM01.1, D-47/LOW-MED

VOA, 11.4.3.2). Two results were qualified as estimated for sample F23Q9.

III. TECHNICAL USABILITY ASSESSMENT OF THE DATA PACKAGE

The total number of sample results reviewed was 1,040 for this data package. Some results were qualified for technical problems, and the significant problems are addressed below.

A. The 1,4-dioxane quantitation limit was qualified as unusable for all samples because 1,4-dioxane did not meet the technical minimum RRF criteria for all calibrations.

B. Some results were qualified for four samples because of poor DMC performance.

C. Some results were qualified for two samples because of poor IS performance, including the unusable results for seven compounds for sample F23R7RE.

IV. OTHER AREA OF CONCERN

Trip blank samples F23R7RE and F23R8 and field blank sample F23S6 had excessive tetrachloroethene contamination.

DATA ASSESSMENT SUMMARY

		LMVOA
1.	HOLDING TIMES	O
2.	GC/MS TUNE/INSTR. PERFORM.	O
3.	CALIBRATIONS	M
4.	BLANKS	M
5.	DMC/SURROGATES	M
6.	MATRIX SPIKE/DUPLICATE/LCS	M
7.	OTHER QC	M
8.	INTERNAL STANDARDS	M
9.	COMPOUND ID/QUANTITATION	O
10.	PERFORMANCE/COMPLETENESS	O
11.	OVERALL ASSESSMENT	M

O = Data had no problems.
M = Data qualified due to major or minor problems.
Z = Data unacceptable.
NA = Not applicable.

ACTION ITEMS: Two samples failed contractual criteria for DMC or IS performance, but the undiluted samples were not reanalyzed.

AREAS OF CONCERN: Target compound 1,4-dioxane did not meet technical minimum RRF calibration criteria, rendering the 1,4-dioxane quantitation limit unusable for all samples. Two compounds failed technical %D calibration criteria. Three samples had some results over the calibration range because of method limitations. Method blank or instrument carryover contamination caused the qualification of four sample results. Some results were qualified for five samples because of poor DMC and/or IS performance, including unusable results for seven compounds for one of the samples. The spiked amount of trichloroethene was not recovered from the MS/MSD samples. One field duplicate pair had inconsistent vinyl chloride results.

NOTABLE PERFORMANCE:

COMMENTS/CLARIFICATIONS
REGION 6 CLP QA REVIEW
Jones Road
CASE 35524 **SDG** F23M9 **SITE** Ground Water Plume **LAB** MITKEM

COMMENTS: This SDG consisted of nine water samples, four trip blanks, four field blanks, and three rinsates for LMVOA analysis following SOW SOM01.1 with modified analysis 1381.0 which required the laboratory to analyze the samples within 5 days of sample receipt. The sampler identified samples F23N3, F23R3, F23R7, and F23R8 as trip blanks; samples F23M9, F23R5, F23S5, and F23S6 as field blanks; samples F23N0, F23R6, and F23T3 as rinsates; and sample F23N1 as the laboratory QC sample. According to the RSCC personnel, samples F23N1/F23N2 and F23Q9/F23W8 (SDG F23T4) were field duplicate pairs. The data package was on time for the 14-day turnaround requirement but had the contractually noncompliant items below.

- Samples F23Q4 and F23Q9 failed contractual criteria for IS response and DMC performance, respectively, but the undiluted samples were not reanalyzed to demonstrate the potential matrix effect.

Standard review was performed for this package as requested by the Region. The target compounds of concern were vinyl chloride, trans-1,2-dichloroethene, cis-1,2-dichloroethene, and tetrachloroethene with the user's desired detection limit of 5 µg/L. The analysis request originally stipulated a desired detection limit of 2 µg/L for vinyl chloride, but a communication record later documented the change to 5 µg/L. All samples met the desired detection limit criteria with the exception of a raised quantitation limit for vinyl chloride in sample F23Q4 resulting from method limitation. Target compounds of concern were detected at concentrations above the user's desired detection limit in all field samples. With the exception of sample F23W2, all field samples required reanalysis at up to 2,000X dilution because of high concentrations of vinyl chloride (up to 920 µg/L), cis-1,2-dichloroethene (up to 7,400 µg/L), and tetrachloroethene (up to 190,000 µg/L). Tetrachloroethene was also detected at various concentrations in five field QC samples, but the only concentrations above the user's desired detection limit were in trip blank samples F23R7RE and F23R8 and field blank sample F23S6.

Target compounds not designated as compounds of concern that were detected at concentrations above the CRQL's in the samples were 1,1-dichloroethene, acetone, methylene chloride, 1,1-dichloroethane, toluene, chlorobenzene, ethylbenzene, o-xylene, m,p-xylene, bromoform, and trichloroethene. High concentrations of trichloroethene also made necessary the diluted reanalyses of most of the field samples. The 1,4-dioxane quantitation limit was qualified as unusable for all samples because 1,4-dioxane failed the technical minimum RRF criteria for all calibrations.

Trip blank sample F23R7 and its reanalysis had poor DMC and IS performance, demonstrating matrix effect. Because of carryover

contamination in the original analysis and better overall QC performance for the reanalysis, the reanalysis results were recommended for use for trip blank sample F23R7. Some results were qualified for five samples because of poor DMC and/or IS performance, including the unusable results for seven compounds for sample F23R7RE. The quantitation limits were unusable for 4-methyl-2-pentanone, 2-hexanone, and the compounds associated with IS1 for sample F23Q4 because of the poor DMC and IS performance, so the 2000X higher quantitation limits from the diluted reanalysis had to be used for 14 undetected results.

Some results were qualified for all samples because of problems with calibration, laboratory contamination, DMC performance, MS/MSD performance, inconsistent field duplicate results, and/or IS performance. ESAT's final data qualifiers in the Data Summary Table (DST) indicate the technical usability of all reported results. An Evidence Audit was conducted for the Complete Sample Delivery Group File (CSF), and the audit results were reported on the Evidence Inventory Checklist.

NOTE: THE FOLLOWING REVIEW NARRATIVE ADDRESSES BOTH CONTRACTUAL ISSUES (BASED ON THE STATEMENT OF WORK) AND TECHNICAL ISSUES (BASED ON THE NATIONAL FUNCTIONAL GUIDELINES). THE ASSESSMENT MADE FOR EACH QC PARAMETER IS SOLELY BASED ON THE TECHNICAL DATA USABILITY, WHICH MAY NOT NECESSARILY BE AFFECTED BY CONTRACTUAL PROBLEMS. THE ASSESSMENTS ARE DEFINED BELOW.

Acceptable = No results were qualified for any problem associated with this QC parameter.
Provisional = Some results were qualified because of problems associated with this QC parameter.
Unusable = All results are unusable because of major problems associated with this QC parameter.

1. Holding Times: Acceptable. The laboratory analyzed the samples within the contractual and technical holding time limits. The pH values indicated that the samples were acid-preserved.

NOTE: Polymerization of vinyl chloride and styrene is likely to occur in acid-preserved samples and could cause low biased results for these analytes.

2. Tuning/Performance: Acceptable. All BFB analyses met GC/MS tuning criteria.

3. Calibrations: Provisional. The laboratory met all contractual calibration criteria. The 1,4-dioxane quantitation limit was qualified as unusable for all samples because 1,4-dioxane failed the technical minimum RRF criteria for all

calibrations. The reviewer qualified as estimated the bromomethane and 1,2,3-trichlorobenzene results for samples F23Q9, F23R8, F23S6, and F23W2 because these target compounds failed the technical %D calibration criteria for the associated opening CCV.

Because of method limitation, some compounds with concentrations exceeding the calibration ranges for three undiluted analyses were diluted out or detected at concentrations below the CRQL's for the diluted reanalyses. Therefore, the reviewer recommended for use but qualified as estimated the following results above the upper calibration limits:

the vinyl chloride result for sample F23N4,

the vinyl chloride and trichloroethene results for sample F23N9, and

the cis-1,2-dichloroethene and trichloroethene results for sample F23Q4.

4. Blanks: Provisional. The method and storage blanks were contractually acceptable although two of the method blanks contained methylene chloride at concentrations below the CRQL. The effects of this laboratory contamination are summarized below.

- The methylene chloride results above the CRQL for samples F23R3, F23R6, and F23R7RE were qualified as undetected ("U"), and the concentrations should be used as raised quantitation limits ("M").
- The methylene chloride results below the CRQL with laboratory "B" flags should be considered undetected and were flagged "U" at the CRQL on the DST.

The vinyl chloride concentration reported for sample F23Q4 was likely due to carryover contamination from a high concentration sample analyzed immediately before it. The diluted reanalysis (1:2000) of sample F23Q4, with a usable undetected vinyl chloride result, resolved the contamination issue. However, to favor a QL closer to the user's desired detection limit, the reviewer designated for use the vinyl chloride result for sample F23Q4, qualified the result as undetected ("U"), and recommended that the reported concentration be used as a raised QL ("M").

Trip and Field Blanks: Trip blank sample F23N3 and field blank sample F23M9 were associated with samples F23N1 and F23N2. Trip blank sample F23R3 and field blank sample F23R5 were associated

with samples F23N4, F23N9, and F23P4. Trip blank sample F23R7RE and field blank sample F23S5 were associated with samples F23P9, F23Q4, and F23W2. Trip blank sample F23R8 and field blank sample F23S6 were associated with sample F23Q9. The only contaminant was tetrachloroethene at concentrations 1.2X to 1.5X the CRQL in trip blank samples F23R7RE and F23R8 and field blank sample F23S6 and at a concentration below the CRQL in trip blank sample F23N3. Field sample results were unaffected by this contamination.

Rinsates: Rinsate sample F23T3 was free from contamination. Rinsate sample F23N0 contained bromoform at a concentration above the CRQL, and rinsate sample F23R6 contained tetrachloroethene at a concentration below the CRQL. Since there was no information associating the rinsates with the field samples, no assessment of sampling equipment contamination could be performed.

5. Deuterated Monitoring Compounds (DMC's)/Surrogates:
Provisional. Sample F23Q9 failed contractual criteria for DMC performance, but the undiluted sample was not reanalyzed to demonstrate the potential matrix effect. Sample F23R7RE also failed contractual criteria for DMC performance. Although the DMC performance was contractually acceptable for the original analysis of sample F23R7, the poor IS performance for both analyses demonstrated matrix effect (see Section 8 of this report). The reviewer recommended using the results for sample F23R7RE because of better overall QC performance.

DMC recoveries were contractually acceptable for all other analyses although six of the analyses had one or two outlying DMC recoveries. Because of an extremely low DMC recovery (less than 20 percent), the quantitation limit was unusable for 4-methyl-2-pentanone and 2-hexanone for sample F23Q4, so the 2000X higher quantitation limit from the diluted reanalysis was recommended for use to favor usable results. Because of other outlying DMC recoveries, the following results were qualified as estimated:

the vinyl chloride and trans-1,2-dichloroethene results for sample F23Q9,

the methylene chloride result for sample F23R7RE, and

the vinyl chloride results for samples F23R8 and F23S6.

The remaining outlying DMC recoveries did not cause result qualification because they were above the QC limits with undetected associated results or because the associated results were not recommended for use or already qualified as unusable for a calibration problem.

6. Matrix Spike/Matrix Spike Duplicate/Laboratory Control Sample (MS/MSD/LCS): Provisional. The reviewer qualified as estimated the trichloroethene result for native QC sample F23N1 because the spiked amount of trichloroethene was not recovered from the MS/MSD samples. All other MS/MSD results were within the SOW QC limits.

7. Other QC:

Field Duplicates: Provisional. The reviewer qualified as estimated the vinyl chloride result for sample F23Q9 because the concentration was inconsistent with the vinyl chloride concentration in the field duplicate sample F23W8 from SDG F23T4. All other field duplicate results were consistent.

8. Internal Standards (IS): Provisional. Sample F23Q4 failed contractual criteria for IS response, but the undiluted sample was not reanalyzed to demonstrate the potential matrix effect. Because of the poor IS performance, the quantitation limit was unusable for the compounds associated with IS1 for sample F23Q4, so the 2000X higher quantitation limit from the diluted reanalysis had to be used for 12 undetected results. The positive hit results associated with IS1 were qualified as estimated for sample F23Q4. Sample F23R7 also failed contractual criteria for IS response, and a reanalysis with poor IS performance demonstrated matrix effect. The reviewer recommended using the results for sample F23R7RE because of better overall QC performance although the quantitation limit was qualified as unusable for compounds associated with IS3 for the reanalysis. IS performance was acceptable for all other samples.

9. Compound Identity (ID)/Quantitation: Acceptable. Target compounds detected at concentrations above the CRQL's in the samples were 1,1-dichloroethene, acetone, methylene chloride, trans-1,2-dichloroethene, 1,1-dichloroethane, cis-1,2-dichloroethene, trichloroethene, tetrachloroethene, toluene, chlorobenzene, ethylbenzene, o-xylene, m,p-xylene, and bromoform. With the exception of sample F23W2, all field samples required reanalysis at up to 2,000X dilution because of high concentrations of vinyl chloride (up to 920 µg/L), cis-1,2-dichloroethene (up to 7,400 µg/L), trichloroethene (up to 5,100 µg/L), and tetrachloroethene (up to 190,000 µg/L). No problem with compound identification or quantitation was detected.

10. Performance/Completeness: Acceptable. The data package was complete. The laboratory was contacted regarding some reporting errors (see the Resubmission Request). The DST in this report is the final version.

11. Overall Assessment: The 1,4-dioxane quantitation limit is unusable for all samples because 1,4-dioxane did not meet the technical minimum RRF criteria for all calibrations, and the results associated with IS3 for sample F23R7RE are unusable because of poor IS response. Some other results were qualified for 11 of the samples because of problems with calibration, laboratory contamination, DMC performance, MS/MSD performance, and/or inconsistent field duplicate results.

ORGANIC DATA QUALIFIER DEFINITIONS

The following definitions provide brief explanations of the ESAT-Region 6 qualifiers assigned to results in the Data Summary Table.

U Not detected at reported quantitation limit.

N Identification is tentative.

J Estimated value.

L Reported concentration is below the CRQL.

M Reported concentration should be used as a raised quantitation limit because of interferences and/or laboratory contamination.

R Unusable.

^ High biased. Actual concentration may be lower than the concentration reported.

v Low biased. Actual concentration may be higher than the concentration reported.

F+ A false positive exists.

F- A false negative exists.

UJ Estimated quantitation limit.

T Identification is questionable because of absence of other commonly coexisting pesticides.

C Identification of pesticide or aroclor has been confirmed by Gas Chromatography/Mass Spectrometer (GC/MS).

X Identification of pesticide or aroclor could not be confirmed by GC/MS when attempted.

• Result not recommended for use because of associated QA/QC performance inferior to that from other analysis.

VOA

Summary of Questions/Issues:

A. Remark 10 was left blank on all of the Form DC-1's (pages 623 to 626). Please complete and resubmit the Form DC-1's.

B. Samples F23Q4 and F23Q9 failed contractual criteria for IS response (SOM01.1, D-45/LOW-MED VOA, 11.3.5) and for DMC performance (SOM01.1, D-45/LOW-MED VOA, 11.3.4), respectively, but the samples were not reanalyzed to demonstrate the potential matrix effect (SOM01.1, D-47/LOW-MED VOA, 11.4.3.2). Diluted reanalyses do not suffice because dilution changes the matrices. No action is required for this SDG due to holding times, but please comply with the reanalysis requirements for future SDG's.

NOTE: Any laboratory resubmission should be submitted either as an addendum to the original CSF with a revised Form DC-2 or submitted as a new CSF with a new Form DC-2 except for replacement pages (SOM01.1, B-33, 2.6.3). Custody seals are required for all such shipments.

Please respond to the above items **within 7 days** by e-mail to El-Feky.Mahmoud@epamail.epa.gov and by regular mail to:

Mr. Mahmoud El-Feky
U.S. EPA Region 6 Laboratory

MEMORANDUM

DATE: August 28, 2006

TO: Marvelyn Humphrey, ESAT PO, Region 6 EPA

FROM: Michael J. Fertitta, Data Reviewer, ESAT

THRU: Dominic G. Jarecki, ESAT Program Manager, ESAT

SUBJECT: CLP Data Review

Contract No.:	EP-W-06-030
TO No.:	002
Task/Sub-Task:	2-11
ESAT Doc. No.:	6002-211-0060
TDF No.:	6-06-050A
ESAT File No.:	O-0033

Attached is the data review summary for Case # 35524
SDG # F23Q0
Site Jones Road Ground Water Plume

COMMENTS:

I. LEVEL OF DATA REVIEW

Standard data review was requested for this data package, but the detection of reporting errors prompted the verification of the result reporting for every sample.

II. CONTRACTUAL ASSESSMENT OF THE DATA PACKAGE

Hardcopy review detected the following contractually noncompliant item that CCS is not expected to detect.

The data package arrived one working day late for the 14-day turnaround requirement.

III. TECHNICAL USABILITY ASSESSMENT OF THE DATA PACKAGE

The total number of sample results reviewed was 1,040 for this data package. Some results were qualified for technical problems, and the significant problems are addressed below.

A. The 1,4-dioxane quantitation limit was qualified as unusable for all samples because 1,4-dioxane did not meet the technical minimum RRF criteria for all calibrations.

B. Some results were qualified for nine samples because of poor DMC performance.

C. The tetrachloroethene result for one medium level sample was inconsistent with the corresponding low level screening result.

DATA ASSESSMENT SUMMARY

		LMVOA
1.	HOLDING TIMES	O
2.	GC/MS TUNE/INSTR. PERFORM.	O
3.	CALIBRATIONS	M
4.	BLANKS	M
5.	DMC/SURROGATES	M
6.	MATRIX SPIKE/DUPLICATE/LCS	O
7.	OTHER QC	M
8.	INTERNAL STANDARDS	O
9.	COMPOUND ID/QUANTITATION	M
10.	PERFORMANCE/COMPLETENESS	O
11.	OVERALL ASSESSMENT	M

O = Data had no problems.
M = Data qualified due to major or minor problems.
Z = Data unacceptable.
NA = Not applicable.

ACTION ITEMS: The data package arrived one working day late for the 14-day turnaround requirement.

AREAS OF CONCERN: Target compound 1,4-dioxane did not meet technical minimum RRF calibration criteria, rendering the 1,4-dioxane quantitation limit unusable for all samples. Method blank contamination caused a raised tetrachloroethene quantitation limit for one sample. Some results were qualified for nine samples because of poor DMC performance. One field duplicate pair had inconsistent bromoform results. The tetrachloroethene result for one medium level sample was inconsistent with the corresponding low level screening result.

NOTABLE PERFORMANCE:

COMMENTS/CLARIFICATIONS
REGION 6 CLP QA REVIEW

Jones Road

CASE 35524 **SDG** F23Q0 **SITE** Ground Water Plume **LAB** MITKEM

COMMENTS: This SDG consisted of 20 soil samples for LMVOA analysis following SOW SOM01.1. Samples F23Q0, F23Q5, F23Q6, F23Q7, F23Q8, F23R0, F23W9, F23X0, and F23X1 were analyzed at the medium level, and the remaining samples were analyzed at the low level. The sampler requested QC analyses for sample F23Q0, but after extensive dialogue with the Region, the laboratory performed MS/MSD analyses on medium level sample F23X0 and low level sample F23X4. Trip blank sample F23R9 and field blank sample F23S7, both from SDG F23T4, and trip blank samples F23R7 and F23R8 and field blank samples F23S5 and F23S6, all from SDG F23M9, were associated with the samples in this SDG. According to the RSCC personnel, samples F23R0/F23W9 and F23W4/F23W7 (SDG F23M4) were field duplicate pairs. The data package arrived one working day late for the 14-day turnaround requirement but was otherwise contractually compliant.

Standard review was performed for this package as requested by the Region, but the detection of reporting errors prompted the verification of the result reporting for every sample. The compounds of concern and the user's desired detection limits are listed below.

Compound	DL (µg/kg) Low Level Sample	DL (µg/kg) Med. Level Sample
vinyl chloride	9	250
cis-1,2-dichloroethene	5	250
trans-1,2-dichloroethene	5	250
tetrachloroethene	5	250

The CRQL's for the soil samples required correction for moisture content, sample weight, and dilution per the SOW. The corrected QL's were reported by the laboratory and are referred to as sample quantitation limits (SQL's) in this report. The laboratory demonstrated instrument sensitivity at the user's desired detection limits. Because of the correction for moisture content and/or dilution, however, the SQL's were elevated above the user's desired detection limits for all compounds of concern for all of the medium level samples and for all compounds of concern except vinyl chloride for most of the low level samples.

No sample contained vinyl chloride or trans-1,2-dichloroethene. Cis-1,2-dichloroethene and/or tetrachloroethene were detected at concentrations above the user's desired detection limits in eight medium level and five low level samples. High concentrations of tetrachloroethene for medium level samples F23Q5 (620,000 µg/Kg) and F23Q8 (85,000 µg/Kg) required up to 80X dilution for the original analyses and/or reanalyses of these samples. The tetrachloroethene result for one medium level sample was inconsistent with the corresponding low level screening result.

Target compounds not designated as compounds of concern that were detected at concentrations above the SQL's in the samples were trichloroethene and bromoform. The 1,4-dioxane quantitation limit was qualified as unusable for all samples because 1,4-dioxane did not meet the technical minimum RRF criteria for all calibrations. Some results were qualified for nine samples because of poor DMC performance.

Some results were qualified for all samples because of problems with calibration, laboratory contamination, DMC performance, inconsistent field duplicate results, and/or compound quantitation. ESAT's final data qualifiers in the Data Summary Table (DST) indicate the technical usability of all reported results. An Evidence Audit was conducted for the Complete Sample Delivery Group File (CSF), and the audit results were reported on the Evidence Inventory Checklist.

NOTE: THE FOLLOWING REVIEW NARRATIVE ADDRESSES BOTH CONTRACTUAL ISSUES (BASED ON THE STATEMENT OF WORK) AND TECHNICAL ISSUES (BASED ON THE NATIONAL FUNCTIONAL GUIDELINES). THE ASSESSMENT MADE FOR EACH QC PARAMETER IS SOLELY BASED ON THE TECHNICAL DATA USABILITY, WHICH MAY NOT NECESSARILY BE AFFECTED BY CONTRACTUAL PROBLEMS. THE ASSESSMENTS ARE DEFINED BELOW.

Acceptable = No results were qualified for any problem associated with this QC parameter.
Provisional = Some results were qualified because of problems associated with this QC parameter.
Unusable = All results are unusable because of major problems associated with this QC parameter.

1. Holding Times: Acceptable. The laboratory analyzed the samples within the contractual and technical holding time limits. Sample preservation was acceptable.

2. Tuning/Performance: Acceptable. All BFB analyses met GC/MS tuning criteria.

3. Calibrations: Provisional. The laboratory met all contractual calibration criteria. The 1,4-dioxane quantitation limit was qualified as unusable for all samples because 1,4-dioxane did not meet the technical minimum RRF criteria for all calibrations. The reviewer qualified as estimated the vinyl chloride result for sample F23X2 and the bromoform results for samples F23Q5, F23Q6, F23Q7, F23R0, F23W9, F23X0, and F23X1 because the target compounds did not meet the technical %D calibration criteria for the associated opening CCV's. Bromomethane or bromoform did not meet the technical %RSD

calibration criteria for the initial calibrations, but result qualification was not required because the compounds were not detected in the associated samples.

4. Blanks: Provisional. The method and storage blanks were contractually acceptable although one medium level method blank contained tetrachloroethene at a concentration below the CRQL. The effects of this laboratory contamination are summarized below.

- The tetrachloroethene result above the SQL for sample F23Q6 was qualified as undetected ("U"), and the concentration should be used as a raised quantitation limit ("M").
- The tetrachloroethene concentration below the SQL for sample F23Q7 should be considered undetected and was "U"-flagged at the SQL on the DST.

Trip and Field Blanks: Trip blank sample F23R8 and field blank sample F23S6, both from SDG F23M9, were associated with samples F23R0, F23R1, F23R2, F23W1, and F23W9. Trip blank sample F23R9 and field blank sample F23S7, both from SDG F23T4, were associated with samples F23X0, F23X1, F23X2, and F23X4. The remaining samples in this SDG were associated with trip blank sample F23R7 and field blank sample F23S5, both from SDG F23M9. The only contaminant was tetrachloroethene at concentrations above the CRQL in trip blank samples F23R7 and F23R8 and field blank sample F23S6. The reviewer was unable to accurately flag the field sample results for contamination because the field QC samples (water) and field samples (soil) had different matrices.

5. Deuterated Monitoring Compounds (DMC's)/Surrogates: Provisional. All analyses met the contractual criteria for DMC performance although seven low level samples and eight medium level samples had up to three outlying DMC recoveries. Because of VDMC2 recoveries below the QC limit, the reviewer qualified as estimated the dichlorodifluoromethane, chloromethane, bromomethane, chloroethane, and carbon disulfide results for medium level samples F23Q0, F23Q6, F23Q7, F23Q8, F23R0, F23W9, F23X0, and F23X1. The reviewer qualified as estimated the bromoform result for low level sample F23W4 because the VDMC5 recovery was above the QC limit for that sample. The remaining DMC recoveries above the QC limits for the low level samples did not cause result qualification because the associated results were undetected.

6. Matrix Spike/Matrix Spike Duplicate/Laboratory Control Sample (MS/MSD/LCS): Acceptable. All MS/MSD results were within the SOW QC limits.

7. Other QC:

Field Duplicates: Provisional. The reviewer qualified as estimated the bromoform result for sample F23W4 because the concentration was inconsistent with the bromoform concentration in the field duplicate sample F23W7 from SDG F23M4. All other field duplicate results were consistent.

8. Internal Standards (IS): Acceptable. IS performance was acceptable for all samples.

9. Compound Identity (ID)/Quantitation: Provisional. Target compounds detected at concentrations above the SQL's in the samples were cis-1,2-dichloroethene, trichloroethene, tetrachloroethene, and bromoform. High concentrations of tetrachloroethene for medium level samples F23Q5 (620,000 µg/Kg) and F23Q8 (85,000 µg/Kg) required up to 80X dilution for the original analyses and/or reanalyses of these samples. The reviewer detected a number of reporting errors involving only results below the SQL's for which the laboratory was contacted for correction.

Tetrachloroethene was not detected above the SQL for medium level sample F23Q7 despite the fact that the tetrachloroethene concentration was far over the calibration range for the corresponding low level screening. Therefore, the reviewer qualified as estimated the tetrachloroethene result for sample F23Q7. No other problem was detected with compound identification or quantitation.

10. Performance/Completeness: Acceptable. The data package was complete. The laboratory was contacted regarding some reporting errors (see the Resubmission Request), some of which are expected to affect the DST.

11. Overall Assessment: The 1,4-dioxane quantitation limit is unusable for all samples because 1,4-dioxane did not meet the technical minimum RRF criteria for all calibrations. Some other results were qualified for 11 of the samples because of problems with calibration, laboratory contamination, DMC performance, inconsistent field duplicate results, and/or compound quantitation.

HEADER DEFINITIONS FOR ORGANIC EXCEL DST

CASE: Case Number

SDG: SDG Number

EPASAMP: EPA Sample Number

LABID: Laboratory File/Sample ID

MATRIX: Sample Matrix

ANDATE: Sample Analysis Date

ANTIME: Sample Analysis Time

CASNUM: Compound CAS Number

ANALYTE: Compound Name

Disclaimer: **ESAT verified the accuracy of the information reported in the Excel DST only for the following data fields: CASE, SDG, EPASAMP, MATRIX, ANALYTE, CONC, UNITS, VALDQAL, and ADJCRQL. The data qualifiers in the VALDQAL column indicate the technical usability of the reported results.**

ORGANIC DATA QUALIFIER DEFINITIONS

The following definitions provide brief explanations of the ESAT-Region 6 qualifiers assigned to results in the Data Summary Table.

U Not detected at reported quantitation limit.

N Identification is tentative.

J Estimated value.

L Reported concentration is below the CRQL.

M Reported concentration should be used as a raised quantitation limit because of interferences and/or laboratory contamination.

R Unusable.

^ High biased. Actual concentration may be lower than the concentration reported.

v Low biased. Actual concentration may be higher than the concentration reported.

F+ A false positive exists.

F- A false negative exists.

UJ Estimated quantitation limit.

T Identification is questionable because of absence of other commonly coexisting pesticides.

C Identification of pesticide or aroclor has been confirmed by Gas Chromatography/Mass Spectrometer (GC/MS).

X Identification of pesticide or aroclor could not be confirmed by GC/MS when attempted.

* Result not recommended for use because of associated QA/QC performance inferior to that from other analysis.

In reference to data for the following fractions:

LMVOA

Summary of Questions/Issues:

A. Forms 2C and 2D (pages 11 and 12): Samples F23Q2, F23R2, F23W1, F23W3, F23W4, F23W5, and F23X4 had recoveries above the QC limits for VDMC4, VDMC5, VDMC6, and/or VDMC10, but the recoveries were not "*"-flagged or counted under the "TOT OUT" column. Please correct and resubmit pages 11 and 12.

B. Form 2C (page 13): Based on the raw data (pages 231, 243, and 253), the VDMC2 recoveries reported for samples F23W9, F23X0, and F23X1 should have been 39, 34, and 33 percent, respectively, not 0 percent. Please correct and resubmit page 13.

C. Form 3B (page 15): The "SPIKE ADDED" for the low level MSD analysis should be 49.0196 µg/Kg, not 49.8504 µg/Kg, based on the 6.0 gram sample size and 15% moisture content. Please correct and resubmit page 15.

D. Chloroethane-d5 was omitted from the quantitation report for sample F23Q0 (page 45). Please correct and resubmit page 45.

E. Spectra were submitted for 2-butanone in samples F23Q0 (page 50) and F23Q6 (page 113), but 2-butanone did not appear on the quantitation reports (pages 45 and 110, respectively) or Forms 1 (pages 41 and 106, respectively). Please verify and submit the necessary corrections.

F. The positive hits below were reported on the Forms 1 and had the required spectral data, but they were omitted from the quantitation reports. Please verify and submit the necessary corrections.

Sample	Compound	Form 1	Spectra	Quant. Report
F23Q0	trichloroethene	page 42	page 51	page 45
F23Q8	2-butanone	page 126	page 134	page 130

Resubmission Request

Continuation Page: 2
Laboratory/Contact: MITKEM/Agnes Ng
In Reference to Case No. 35524 **SDG:** F23Q0

G. The positive hits below appeared on the quantitation reports and had the required spectral data but were not reported on the Forms 1. Please verify and submit the necessary corrections.

Sample	Compound	Quant. Report	Spectra	Form 1
F23Q5	trichloroethene	page 90	page 93	page 87
F23W9	cis-1,2-dichloroethene	page 231	page 234	page 227
	2-butanone	page 231	page 235	page 227
	trichloroethene	page 231	page 236	page 228
F23X1	cis-1,2-dichloroethene	page 253	page 256	page 249
	2-butanone	page 253	page 257	page 249

H. Sample F23Q8DL: The Form 1 TIC for sample F23Q8 (page 128) was submitted a second time with this sample (page 143). Please submit the correct Form 1 TIC for sample F23Q8DL as page 143.

I. Samples F23X4/MS/MSD: Bromoform was detected at over twice the quantitation limit for sample F23X4 but was not reported for samples F23X4MS or F23X4MSD. Please double-check the MS/MSD analyses for possible false negative bromoform results.

NOTE: Any laboratory resubmission should be submitted either as an addendum to the original CSF with a revised Form DC-2 or submitted as a new CSF with a new Form DC-2 except for replacement pages (SOM01.1, B-33, 2.6.3). Custody seals are required for all such shipments.

Please respond to the above items **within 7 days** by e-mail to El-Feky.Mahmoud@epamail.epa.gov and by regular mail to:

MEMORANDUM

DATE: August 25, 2006

TO: Marvelyn Humphrey, ESAT PO, Region 6 EPA

FROM: Linda Hoffman, Data Reviewer, ESAT

THRU: Dominic G. Jarecki, ESAT Program Manager, ESAT

SUBJECT: CLP Data Review

Contract No.:	EP-W-06-030
TO No.:	002
Task/Sub-Task:	2-11
ESAT Doc. No.:	6002-211-0057

Attached is the data review summary for Case # 35524
SDG # F23T4
Site Jones Road Ground Water Plume

COMMENTS:

I. LEVEL OF DATA REVIEW

Standard data review was performed for this data package.

II. CONTRACTUAL ASSESSMENT OF THE DATA PACKAGE

CCS found the data package contractually compliant. Hard copy review did not find any contractually noncompliant items that resulted in data qualification.

III. TECHNICAL USABILITY ASSESSMENT OF THE DATA PACKAGE

The total number of sample results reviewed for this data package was 364. Some results were qualified for technical problems, and the significant problems are addressed below.

A. The 1,4-dioxane quantitation limit was qualified as unusable for all samples because 1,4-dioxane did not meet the technical minimum RRF criteria for all calibrations.

B. Some results were qualified for samples F23W8 and F23Z8 because of poor DMC performance, including unusable results for sample F23Z8.

C. The 1,1-dichloroethene and toluene results were unusable for native sample F23Z8 because of very low MS/MSD recoveries (<20%) for these compounds.

		LMVOA
1.	HOLDING TIMES	O
2.	GC/MS TUNE/INSTR. PERFORM.	O
3.	CALIBRATIONS	M
4.	BLANKS	O
5.	DMC/SURROGATES	M
6.	MATRIX SPIKE/DUPLICATE/LCS	M
7.	OTHER QC	M
8.	INTERNAL STANDARDS	O
9.	COMPOUND ID/QUANTITATION	O
10.	PERFORMANCE/COMPLETENESS	O
11.	OVERALL ASSESSMENT	M

O = Data had no problems.
M = Data qualified due to major or minor problems.
Z = Data unacceptable.
NA = Not applicable.

ACTION ITEMS:

AREAS OF CONCERN: Target compound 1,4-dioxane did not meet technical minimum RRF calibration criteria, rendering the 1,4-dioxane quantitation limit unusable for all samples. Some results were qualified for two samples because of poor DMC performance, including unusable results for 14 compounds for one of the samples. The MS/MSD recoveries for 1,1-dichloroethene and toluene were extremely low, resulting in unusable results for these compounds for the native sample. The field duplicates had inconsistent vinyl chloride results.

NOTABLE PERFORMANCE: The data package arrived 1 calendar day early for the 14-day turnaround time requirement.

COMMENTS/CLARIFICATIONS
REGION 6 CLP QA REVIEW

CASE 35524 **SDG** F23T4 **SITE** Jones Road Ground Water Plume
LAB MITKEM

COMMENTS: This SDG consisted of two water samples, two trip blanks, two field blanks, and one rinsate for LMVOA analysis following SOW SOM01.1 with modified analysis 1381.0, which required the laboratory to analyze the samples within five days of sample receipt. The sampler identified samples F23R9 and F23S0 as trip blanks, samples F23S7 and F23S8 as field blanks, sample F23T4 as a rinsate, and sample F23Z8 as the laboratory QC sample. According to the RSCC personnel, samples F23W8 and F23Q9 (SDG F23M9) were field duplicates. One sample in this SDG was associated with trip blank sample F23R8 and field blank sample F23S6 (both in SDG F23M9). The data package was on time for the 14-day turnaround requirement but contained the following contractually noncompliant item.

- The laboratory did not seal the sample tags in a plastic bag.

Standard review was performed for this package as requested by the Region. The target compounds of concern were vinyl chloride, trans-1,2-dichloroethene, cis-1,2-dichloroethene, and tetrachloroethene with the user's desired detection limit of 5 µg/L. The samples met the desired detection limit criteria with the exception of sample F23Z8 where results for all compounds of concern were unusable because of extremely low DMC recoveries. With the exception of trans-1,2-dichloroethene, all compounds of concern had concentrations over the user's desired detection limit for sample F23W8. Sample F23W8 required reanalysis at 80X dilution because of high concentrations of cis-1,2-dichloroethene, trichloroethene (not a compound of concern), and tetrachloroethene.

The only target compounds not designated as compounds of concern that were detected at concentrations above the CRQL's were trichloroethene and bromoform in sample F23W8. The 1,4-dioxane quantitation limit was qualified as unusable for all samples because 1,4-dioxane failed the technical minimum RRF criteria for all calibrations. Two samples had low DMC recoveries, and the extremely low recoveries caused several results to be qualified as unusable for F23Z8. Toluene and 1,1-dichloroethene had very low MS/MSD recoveries, rendering native sample results for these analytes unusable.

Some results were qualified for all samples because of problems with calibration, DMC performance, MS/MSD performance, and/or inconsistent field duplicate results. ESAT's final data qualifiers in the Data Summary Table (DST) indicate the technical usability of all reported results. An Evidence Audit was conducted for the Complete Sample Delivery Group File (CSF), and the audit results were reported on the Evidence Inventory Checklist.

ORGANIC QA REVIEW
CONTINUATION PAGE

CASE 35524 **SDG** F23T4 **SITE** Jones Road Ground Water Plume
LAB MITKEM

NOTE: THE FOLLOWING REVIEW NARRATIVE ADDRESSES BOTH CONTRACTUAL ISSUES (BASED ON THE STATEMENT OF WORK) AND TECHNICAL ISSUES (BASED ON THE NATIONAL FUNCTIONAL GUIDELINES). THE ASSESSMENT MADE FOR EACH QC PARAMETER IS SOLELY BASED ON THE TECHNICAL DATA USABILITY, WHICH MAY NOT NECESSARILY BE AFFECTED BY CONTRACTUAL PROBLEMS. THE ASSESSMENTS ARE DEFINED BELOW.

Acceptable = No results were qualified for any problem associated with this QC parameter.
Provisional = Some results were qualified because of problems associated with this QC parameter.
Unusable = All results are unusable because of major problems associated with this QC parameter.

1. Holding Times: Acceptable. The laboratory analyzed the samples within the contractual and technical holding time limits. The pH values indicated that all samples except sample F23W8 were acid-preserved.

NOTE: Polymerization of vinyl chloride and styrene is likely to occur in acid-preserved samples and could cause low biased results for these analytes.

2. Tuning/Performance: Acceptable. All BFB analyses met GC/MS tuning criteria.

3. Calibrations: Provisional. The laboratory met all contractual calibration criteria. The 1,4-dioxane quantitation limit was qualified as unusable for all samples because 1,4-dioxane failed the technical minimum RRF criteria for all calibrations. A few compounds failed the technical %RSD/%D calibration criteria. However, since these compounds were not detected in the associated samples, data qualification was unnecessary.

4. Blanks: Acceptable. The method and storage blanks were contractually acceptable although one method blank contained methylene chloride at a concentration below the CRQL. This concentration did not affect any sample results.

Trip and Field Blanks: Trip blank sample F23R9 and field blank sample F23S7 were associated with sample F23Z8. Trip blank sample F23S0 and field blank sample F23S8 were not associated with the samples in this SDG. Trip blank sample F23R8 and field blank sample F23S6 from SDG F23M9 were associated with sample F23W8. The only contaminant was tetrachloroethene at concentrations 1.5X the CRQL in trip blank sample F23R8 and field blank sample F23S6. The tetrachloroethene result for sample F23W8 was unaffected by this contamination.

Rinsate: Rinsate sample F23T4 was free from contamination.

5. Deuterated Monitoring Compounds (DMC's)/Surrogates: Provisional. Sample F23Z8 failed contractual criteria for DMC performance and had very low recoveries (0% to 7%) for VDMC's 1, 3, 9, and 10. The MS/MSD analyses for this sample repeated the poor DMC performance, demonstrating a potential matrix effect. As a result, the reviewer qualified the undetected results associated with VDMC's 1, 3, 9, and 10 for sample F23Z8 as unusable. Sample F23W8 had a low VDMC6 recovery, so the reviewer qualified as estimated all results associated with this DMC for this sample.

6. Matrix Spike/Matrix Spike Duplicate/Laboratory Control Sample (MS/MSD/LCS): Provisional. The reviewer qualified as unusable the 1,1-dichloroethene and toluene results for native QC sample F23Z8 because the MS/MSD recoveries for 1,1-dichloroethene and toluene were extremely low (6% - 10%). The %RPD for 1,1-dichloroethene was above the QC limit. Since this analyte was not detected in the native sample, result qualification was not necessary.

7. Other QC:

Field Duplicates: Provisional. The reviewer qualified as estimated the vinyl chloride result for sample F23W8 because the concentration was inconsistent with the vinyl chloride concentration in the field duplicate sample F23Q9 from SDG F23M9.

8. Internal Standards (IS): Acceptable. IS performance was acceptable.

9. Compound Identity (ID)/Quantitation: Acceptable. Target compounds detected at concentrations above the CRQL's were vinyl chloride, cis-1,2-dichloroethene, trichloroethene, tetrachloroethene, and bromoform in sample F23W8. This sample required reanalysis at an 80x dilution because of high concentrations of cis-1,2-dichloroethene, trichloroethene, and tetrachloroethene. No problem with compound identification or quantitation was detected.

10. Performance/Completeness: Acceptable. The data package was complete. The laboratory was contacted for a CSF and other issues (see the Resubmission Request). The DST in this report is the final version.

11. Overall Assessment: Some results were qualified for all samples because of problems with calibration, DMC recoveries, MS/MSD performance, and/or inconsistent field duplicate results.

HEADER DEFINITIONS FOR ORGANIC EXCEL DST

CASE: Case Number

SDG: SDG Number

EPASAMP: EPA Sample Number

LABID: Laboratory File/Sample ID

MATRIX: Sample Matrix

ANDATE: Sample Analysis Date

ANTIME: Sample Analysis Time

CASNUM: Compound CAS Number

ANALYTE: Compound Name

CONC: Compound Concentration

VALDQAL: Region 6 Organic Data Validation Qualifier (see Organic Data Qualifier Definitions on the next page)

UNITS: Concentration Units

ADJCRQL: Adjusted Contract Required Quantitation Limit Value

SMPDATE: Sampling Date

STATLOC: Station Location

Disclaimer: **ESAT verified the accuracy of the information reported in the Excel DST only for the following data fields: CASE, SDG, EPASAMP, MATRIX, ANALYTE, CONC, UNITS, VALDQAL, and ADJCRQL. The data qualifiers in the VALDQAL column indicate the technical usability of the reported results.**

ORGANIC DATA QUALIFIER DEFINITIONS

The following definitions provide brief explanations of the ESAT-Region 6 qualifiers assigned to results in the Data Summary Table.

U Not detected at reported quantitation limit.

N Identification is tentative.

J Estimated value.

L Reported concentration is below the CRQL.

M Reported concentration should be used as a raised quantitation limit because of interferences and/or laboratory contamination.

R Unusable.

^ High biased. Actual concentration may be lower than the concentration reported.

v Low biased. Actual concentration may be higher than the concentration reported.

F+ A false positive exists.

F- A false negative exists.

UJ Estimated quantitation limit.

T Identification is questionable because of absence of other commonly coexisting pesticides.

C Identification of pesticide or aroclor has been confirmed by Gas Chromatography/Mass Spectrometer (GC/MS).

X Identification of pesticide or aroclor could not be confirmed by GC/MS when attempted.

• Result not recommended for use because of associated QA/QC performance inferior to that from other analysis.

In reference to data for the following fractions:

CSF Issue LMVOA

Summary of Questions/Issues:

CSF Issue

The sample tags were not sealed in plastic bags (SOM01.1, B-22, 2.6.2.3). In the future, please follow the contract in this matter.

LMVOA

A. Please explain why an ion other than the primary ion was used for 1,1-dichloroethene-d2 and document this deviation in the SDG narrative (SOM01.1, D-42/LMVOA, 11.2.1.7).

B. The raw data and Form 1's for the MS/MSD samples do not list toluene as being detected. However, on Form 3 (p. 13), 5.0 µg/L is reported for toluene for both MS/MSD analyses. Please resolve this discrepancy and make the necessary corrections and resubmissions.

NOTE: Any laboratory resubmission should be submitted either as an addendum to the original CSF with a revised Form DC-2 or submitted as a new CSF with a new Form DC-2 except for replacement pages (SOM01.1, B-33, 2.6.3). Custody seals are required for all such shipments.

Please respond to the above items **within 7 days** by e-mail to El-Feky.Mahmoud@epamail.epa.gov and by regular mail to:

Mr. Mahmoud El-Feky
U.S. EPA Region 6 Laboratory
10625 Fallstone Road
Houston, TX 77099

If you have any questions, please contact Mr. El-Feky at (281) 983-2128.

Distribution: (1) Lab Copy, (2) Region Copy, and (3) ESAT Copy

SAMPLE RECEIPT LOG

JOB #: T14353 DATE/TIME RECEIVED: 8/9/06 1630

CLIENT: Shaw - Jones Rd INITIALS: RV

Condition/Variance (Circle "Y" for yes and "N" for no or NA. If "N" is circled, see variance for explanation):

1. (Y) N Sample received in undamaged condition.
2. Y (NA) Samples received within temp. range.
3. Y (NA) Sample received with proper pH.
4. (Y) N Sample received in proper containers.
5. (Y) N Sample volume sufficient for analysis.
6. (Y) N Sample received with chain of custody.
7. Y N Chain of Custody matches **sample IDs and analysis** on containers.
8. Y (NA) Samples Headspace acceptable
9. Y N (NA) Custody seal received intact and tamper not evident on cooler.
10. Y N (NA) Custody seal received intact and tamper not evident on bottles.

* Vb = Bulk Volume

PTS File No: 36648
Client: Accutest Laboratories

PHYSICAL PROPERTIES DATA - DRAINAGE (EFFECTIVE) POROSITY

PROJECT NAME: N/A
PROJECT NO: T14353

		METHODS:	ASTM D425M	ASTM D425M
SAMPLE ID.	DEPTH, ft.	SAMPLE ORIENTATION (1)	TOTAL POROSITY, %Vb	EFFECTIVE POROSITY, %Vb
T14353-1	N/A	V	33.8	3.7
T14353-2	N/A	V	31.5	3.6
T14353-3	N/A	V	35.7	3.3
T14353-4	N/A	V	50.4	4.0
T14353-5	N/A	V	41.1	12.9
T14353-6	N/A	V	35.9	6.9
T14353-7	N/A	V	37.4	10.3
T14353-8	N/A	V	38.8	9.2
T14353-9	N/A	V	45.8	15.8

(1) Sample Orientation: H = horizontal; V = vertical; Vb = Bulk Volume

PTS File No: 36648
Client: Accutest Laboratories

PHYSICAL PROPERTIES DATA - HYDRAULIC CONDUCTIVITY

PROJECT NAME: N/A
PROJECT NO: T14353

		METHODS:	API RP 40; ASTM D5084; EPA 9100	
			25 PSI CONFINING STRESS	
SAMPLE ID.	DEPTH, ft.	SAMPLE ORIENTATION (1)	EFFECTIVE (2,3) PERMEABILITY TO WATER, millidarcy	HYDRAULIC CONDUCTIVITY (2,3), cm/s
T14353-1	N/A	V	0.173	1.74E-07
T14353-2	N/A	V	0.294	2.95E-07
T14353-3	N/A	V	0.072	7.24E-08
T14353-4	N/A	V	0.168	1.69E-07
T14353-5	N/A	V	0.712	7.02E-07
T14353-6	N/A	V	0.271	2.67E-07
T14353-7	N/A	V	0.412	4.06E-07
T14353-8	N/A	V	0.417	4.11E-07
T14353-9	N/A	V	1.51	1.48E-06

(1) Sample Orientation: H = horizontal; V = vertical (2) Native State or Effective = With as-received pore fluids in place (3) Permeability to water and hydraulic conductivity measured at saturated conditions

ATTACHMENT 6
WASTE MANIFESTS

Signed in the course and scope of the contractual performa
or service on behalf of the TCEQ, as required by a State Contract.

NON-HAZARDOUS WASTE MANIFEST

GENERATOR

Company and Location Shaw E+I

Address 11600 Jones Rd City / State / Zip Houston, TX 77070

EPA ID# CESQG TECQ Generator# CESQG

Type of Waste: LES Waste Code 19613Q11

Grease Trap ☐ Capacity of Waste Facility

Grit Trap ☐ Quantity of Waste Removed 3300

Lint Trap ☐

Other (Describe) ☒ Purgewater and Sediment

GENERATOR'S CERTIFICATION: I hereby certify that the above named material is not a hazardous waste as defined by 40 CFR Part 261 or any applicable state law or any applicable regulation, has been properly described, and the information provided above is complete, true and accurate.

William Hardman (Shaw E+I Employee) — Generator Authorized Agent Name (PRINTED)

Signature

8,3,06 — Shipment Date

TRANSPORTER

Bayou City ENV. — Company Name

10234 Lucore — Address

713 425 6900 — Phone Number

86133 — TECQ Transporter #

I hereby certify that the above named material was picked up at the generator site listed above on the shipment date written above and delivered without incident to the destination listed below.

City Permit #

510 — Truck #

Dwayne REED — Driver Name (Printed)

R7K-J74 — License Plate #

Dwayne Reed — Driver Signature

8,3,06 — Delivery Date

DESTINATION

Site Name Liquid ENV. Solutions

Manager / Phone # 713 671-4800

I hereby certify that the above named material has been accepted by this facility and to the best of my knowledge the foregoing is true and accurate.

Address 250 Bellbarn Drive, Houston TX 77013

Permit #

Signature

1,1,06 — Delivery Date

White - Generator Green - Governmental Unit Yellow - Generator Return Pink - Transporter Gold - Disposer
