NAAQS National Ambient Air Quality Standard (Rolling 3-Month Average for lead)

a Air sample location shown on attached Figure 1.

b Wind speed measured at startup of air sampling pump.

c Wind direction varied during the 8-hour sampling interval from southerly to northerly in the morning, and ENE to ESE in the afternoon.

d The nickel concentrations reported by the analytical laboratory for the air samples collected on 10-13-11 were lower in concentration than the trip blank sample, indicating the reported nickel concentrations in the 10-13-11 samples are an artifact of the analytical laboratory.

Notes: (1) Samples analyzed by TestAmerica using NIOSH Method 7300 or 7303, except mercury which is analyzed using NIOSH Method 6009.

(2) Wind speed measured at the time of air sample collection using Windmate Model WM-100 air velocity meter.

(3) Air samples collected using Gilian Model GilAir3 and GilAir5 air sample pumps.
