

TCEQ Analysis of TCEQ Contractor Surface Water Quality Sampling Data Collected on April 4, 2019 (Final Lab Results)

The Texas Commission on Environmental Quality (TCEQ) received final surface water quality data for 129 constituents at two (2) different sites. One sample was collected at each site on April 4, 2019 by the TCEQ's contractor. The constituents consist of inorganics, organics, metals, nutrients, total suspended solids, chemical oxygen demand (COD), carbonaceous biochemical oxygen demand (CBOD), and oil and grease in water. The sampling sites were the following:

- Tidal Road and Gate 13
- Tidal Road @ Tucker Bayou

This assessment is based on final results received from the laboratory. Although sampled, the Mouth of Tucker Bayou and Buffalo Bayou site was not analyzed by the laboratory. As additional water quality sampling is completed, the data will be assessed, and results made available.

The TCEQ used the Texas Water Quality Standards and the Texas Risk Reduction Program as references for determining the known health protective concentration levels (PCLs) in surface water. PCLs are very conservative and below levels where we would expect any health impacts. The TCEQ is using these PCLs to evaluate impacts to aquatic life and human health. No public drinking water system draws its source water from the Houston Ship Channel. This methodology was also used for previously reviewed data from samples collected by ITC and will be used to review samples from the TCEQ contractor. The TCEQ used the PCLs listed in the tables below to assess the surface water quality data.

Table 1: Assessment of Final Laboratory Results

	Tidal Road and Gate 13	Tidal Road @ Tucker Bayou
Number of Constituents	129	129
Number of constituents analyzed but not detected (not detected above the method detection limit or quantitation limit)	103	107
Number of constituents detected above the method detection limit or quantitation limit	26	22
Number of constituents detected but below their known PCLs	7	12
Number of constituents that exceeded their known PCLs	10	3
Number of constituents that are still pending further TCEQ evaluation	0	0
Number of constituents that do not have a PCL or are assessed with other constituents*	9	7

*The water quality parameters ammonia nitrogen (as N), total Kjeldahl nitrogen, total phosphate, total organic nitrogen, and total suspended solids are not related to human health; therefore it is not appropriate to develop human health comparison values to evaluate these parameters. Three chemicals on the laboratory target analyte list (4-bromophenyl phenyl ether, 4-chlorophenyl phenyl ether, and benzo(g,h,i)perylene) do not have surface water comparison values and consequently will not be evaluated. These water quality parameters and chemicals are not directly related to the ITC incident, and the TCEQ is evaluating the chemicals that are directly related to the ITC incident (benzene and toluene, for example). C6-12, C12-28 and C28-35 range hydrocarbons, as well as total petroleum hydrocarbons, are included in the assessment of oil and grease. Therefore, these constituents are not assessed individually.

Below are tables of the constituents that exceeded their known PCL at the sampling sites.

Table 2: Tidal Rd & Gate 13

Constituent	Maximum (micrograms/L)	PCL (micrograms/L)
Benzene	18200	581
Copper	15.2	3.6
1,2-Dichloroethane	440	364
Lead	6.74	3.83
2-Methylnaphthalene	53.1	30
Naphthalene	351	125
Phenolic	53.6	0.29
Toluene	7250	1000
Total Xylenes	3350	850
Zinc	177	284.2

Table 3: Tidal Road @ Tucker Bayou

Constituent	Maximum (micrograms/L)	PCL (micrograms/L)
Benzene	1450	581
Copper	6.18	3.6
Oil and Grease, HEM	44000	28000
