

## Nutrient Criteria Development Advisory Workgroup

April 13, 2005

### Question 1.

Background: Least impacted reservoirs were those with <10% urban + agriculture land use.

Handouts:

- list of all designated reservoirs with the percentage of land use (urban + agriculture)
- list of reservoirs with 10-20% urban + agriculture land use
- table with the criteria for reservoirs with 0-20% urban + agriculture land use
- frequency distribution

Question:

As an additional option for criteria for "least impacted" reservoirs, TCEQ staff are considering adding at least some of the reservoirs with 10-20% urban + agriculture land use. For this option, which of these additional reservoirs should not be included and why?

What are the pros and cons for adding reservoirs with 10-20% urban + agriculture land use?
