

2004 Texas Water Quality Inventory Status and Category of All Waters (May 13, 2005)

This report indicates the assigned category for each assessment area, or assessment unit (AU), and the overall category for the water body. This report also summarizes the 2004 water quality assessment results for each water body. For each designated use, it indicates the level of support. Where the designated use is partially supported or not supported, the report identifies the parameters and areas that did not meet the water quality standards in 2004. Also shown are areas and parameters identified in previous years as not meeting the water quality standards, but which did not have sufficient data in 2004 to reassess.

Explanation of the Headings

- SegID:** This is the classified segment number assigned to a water body or portion of a water body in the *Texas Surface Water Quality Standards*. A letter designation following the segment number (such as "A" or "B") indicates an unclassified water body that is located within the watershed of the classified segment whose number is shown before the letter.
- AUId:** The unique number for a specific assessment area, or assessment Unit (AU).
- Parameters:** These are pollutants or water quality conditions for which screening procedures indicate an existing or previously identified parameter which did not meet the water quality standards. A previously identified parameter is one which was identified in a previous assessment and where there were insufficient data in 2004 to evaluate changes in water quality.
- Category:** One of five categories is assigned to each parameter and water body to provide information about water quality status and management activities. The categories are defined below:
- Category 1. Attaining the water quality standard and no use is threatened.
 - Category 2. Attaining some of the designated uses; no use is threatened; and insufficient or no data and information are available to determine if the remaining uses are attained or threatened.
 - Category 3. Insufficient or no data and information to determine if any designated use is attained.
 - Category 4. Standard is not supported or is threatened for one or more designated uses but does not require the development of a Total Maximum Daily Load (TMDL).
 - 4a. TMDL has been completed and approved by EPA.
 - 4b. Other pollution control requirements are reasonably expected to result in the attainment of the water quality standard in the near future.
 - 4c. Nonsupport of the water quality standard is not caused by a pollutant.
 - Category 5. The water body does not meet applicable water quality standards or is threatened for one or more designated uses by one or more pollutants.
 - 5a. A TMDL is underway, scheduled, or will be scheduled.
 - 5b. A review of the water quality standards will be conducted before a TMDL is scheduled.
 - 5c. Additional data and information will be collected before a TMDL is scheduled.
- TMDL Rank:** Water bodies in Category 5 have been prioritized by TCEQ. For Category 5a, a rank of High (H), Medium (M), or Low (L) is given for the urgency to initiate a TMDL. Once a TMDL project is initiated, the rank changes to "U" for Underway. Rankings are based on the current understanding of the causes of the non-support of the water quality standards and the sources of pollution, the importance of the resource, the severity of the impact, and the likelihood of TMDL success.
- For water bodies in Category 5b, a ranking of "S" has been assigned to indicate that a standards review will be conducted before a TMDL is scheduled.
- For water bodies in Category 5c, a ranking of "D" has been assigned to indicate that additional data and information will be collected before a TMDL is scheduled.
- For Categories 5b and 5c, TCEQ will develop a separate prioritized schedule for standards review and the collection of additional data and information. These activities will be conducted at the same time that TMDLs are being developed for the parameters in Category 5a. However, for parameters in Categories 5b and 5c, TCEQ will not schedule a TMDL at this time.
