Explanation of Column Headings

SegID and Name:	The unique identifier (SegID), segment name, and location of the water body. The SegID may be one of two types of numbers. The first type is a classified segment number (4 digits, <i>e.g.</i> 0218), as defined in the Texas Surface Water Quality Standards. The second type is an unclassified water body (0218A), not defined in the Standards, though associated with a classified water body because it is in the same watershed. The segment name and description immediately follow SegID.
Parameter(s):	Pollutants or water quality conditions that assessment procedures indicate do not meet assigned water quality standards.
Category:	On this report, one of three categories is assigned to each combination of parameter and water body to provide information about the water quality status and management activities. The categories are defined below:
	 <u>Category 5:</u> The water body does not meet applicable water quality standards or is threatened for one or more designated uses by one or more pollutants. <i>Category 5a</i> - A TMDL is underway, scheduled, or will be scheduled. <i>Category 5b</i> - A review of the water quality standards for this water body will be conducted before a TMDL is scheduled. <i>Category 5c</i> - Additional data and information will be collected before a TMDL is scheduled.
