

2008 Texas Index of Water Quality Impairments (March 19, 2008)

This index identifies all water bodies with one or more impairments. The index is divided into two main categories:

- Category 4 Impairments that are not suitable for a TMDL or for which a TMDL has already been approved
- Category 5 Impairments which may be suitable for development of a TMDL

General Information

- SegID and Name: The unique identifier (SegID), segment name, and location of the water body. The SegID may be one of two types of numbers. The first type is a classified segment number (4 digits, *e.g.*, 0218), as defined in Appendix A of the Texas Surface Water Quality Standards (TSWQS). The second type (five digits, *e.g.*, 0218A) is a partially classified water body described in Appendix D of the TSWQS, or an unclassified water body, not defined in the TSWQS, though associated with a classified water body because it is in the same watershed. The segment name and description immediately follow SegID.
- Area: Identifies the assessment unit (AU_ID, *e.g.* 0101A_01) and describes the location of the specific area in which one or more water quality standards are not met.
- Parameter(s): Pollutants or water quality conditions that assessment procedures indicate do not meet assigned water quality standards.

Explanation of Column Headings

- Category: In the 2008 Assessment, one of two categories was assigned to each impaired parameter to provide information about water quality status and management activities on that water body. Both Category 4 and Category 5 are divided into three subcategories; when a water body has parameters in multiple subcategories, its overall category is the highest category. The category and its subcategories are defined below:
- Category 4: Standard is not supported or is threatened for one or more designated uses but does not require the development of a TMDL.
Category 4a - TMDL has been completed and approved by EPA.
Category 4b - Other pollution control requirements are reasonably expected to result in the attainment of the water quality standard in the near future.
Category 4c - Nonsupport of the water quality standard is not caused by a pollutant.
- Category 5: The water body does not meet applicable water quality standards or is threatened for one or more designated uses by one or more pollutants.
Category 5a - A TMDL is underway, scheduled, or will be scheduled.
Category 5b - A review of the water quality standards for this water body will be conducted before a TMDL is scheduled.
Category 5c - Additional data and information will be collected before a TMDL is scheduled.
- Carryforward: Some previously listed impairments did not have adequate data to re-assess in 2008 and were carried forward from 2006.
- Year First Listed: The assessment year the pollutant or water quality condition in this water body initially did not meet water quality standards as indicated in any of the areas assessed (AU_IDs).
