
2010 Texas Water Quality Inventory Water Bodies Evaluated

Explanation of Report Headings

- SegID and Name:** The unique identifier (SegID), segment name, and location of the water body. Items in this field may be one of three types of numbers for SegID. The first type is a classified segment number (4 digits, e.g. 0218), as defined in the Texas Surface Water Quality Standards. The second type is an unclassified water body (e.g. 0218A), not defined in the Standards, associated with a classified water body because it is in the same watershed. The third type are special Segments for Oyster Water Use (e.g. 2421OW) and Beach Watch Use (e.g. 2481CB) special areas. The segment name and description follow SegID.
- Segment Type:** The type of water body (e.g. Reservoir, Estuary, Freshwater Stream, Tidal Stream, etc.)
- New Segment:** This indicates (yes/no) if this water body is a new segment compared to the 2008 master segment list.
- AUID:** Assessment Unit (AU) ID (e.g., 0101A_01) is the alpha-numeric identifier of one portion of a segment. The AU descriptions immediately follow the AU ID. This report includes all AUs identified for each Segment.
- Flow Type:** Type of flow regime (perennial, intermittent, intermittent with perennial pools) for streams. For non-stream water bodies, Flow type and Segment Type are typically the same.
- Flow Type Source:** This is the reference source used to determine the flow type of an AU.
- ALU Designation:** This is the designated Aquatic Life Use associated with the AU (exceptional, high, intermediate, limited, and minimal).
- ALU Designation Source:** This is the reference source of the ALU designation.
- Station ID(s):** Station IDs are the numbers that identify specific monitoring sites associated with that AUID, but does not necessarily indicate data were available from that station for the period of record. Some assessment units do not have monitoring stations; other information may have been evaluated to determine support status for those AUs.
