

## 2018 Texas Integrated Report - Texas 303(d) List (Category 5)

---

As required under Sections 303(d) and 305(b) of the federal Clean Water Act, this list identifies the water bodies in or bordering Texas for which effluent limitations are not stringent enough to implement water quality standards, and for which the associated pollutants are suitable for measurement by maximum daily load.

In addition, the TCEQ also develops a schedule identifying Total Maximum Daily Loads (TMDLs) that will be initiated in the next two years for priority impaired waters. Issuance of permits to discharge into 303(d)-listed water bodies is described in the TCEQ regulatory guidance document *Procedures to Implement the Texas Surface Water Quality Standards* (June 2010, RG-194).

Impairments are limited to the geographic area described by the Assessment Unit and identified with a six or seven-digit AU\_ID. A management strategy will be assigned to each impairment. Specific strategies may include TMDL development, water quality standards evaluation, or additional monitoring.

### Explanation of Column Headings

SegID and Name:	The unique identifier (SegID), segment name, and location of the water body. Items may be one of three types of numbers for SegID. The first type is a classified segment number (4 digits, e.g. 0218), as defined in the Texas Surface Water Quality Standards. The second type is an unclassified water body (e.g. 0218A), not defined in the Standards and associated with a classified water body because it is in the same watershed. The third type includes special Segments for Oyster Water Use (e.g. 2421OW) and Beach Watch Use (e.g. 2481CB) special areas. The segment name and description follow SegID.
AU_ID:	Identifies the assessment unit (AU_ID, six or seven digits, e.g., 0101A_01) and describes the location of the specific area within a classified or unclassified water body for which one or more water quality standards are not met.
Parameter(s):	Pollutants or water quality conditions that assessment procedures indicate do not meet assigned water quality standards.
Category:	One of three subcategories assigned to each impaired parameter to provide information about water quality status and management activities on that water body. The categories are defined below:  <u>Category 5</u> : The water body does not meet applicable water quality standards or is threatened for one or more designated uses by one or more pollutants. <i>Category 5a</i> - TMDLs are underway, scheduled, or will be scheduled for one or more parameters. <i>Category 5b</i> - A review of the standards for one or more parameters will be conducted before a management strategy is selected, including the possible revision to the TSWQS. <i>Category 5c</i> - Additional data or information will be collected and/or evaluated for one or more parameters before a management strategy is selected.
Year Segment First Listed	The initial assessment year the pollutant or water quality condition in this water body (Segment, not specifically the year for each AU_ID) did not meet water quality standards.
