

2018 Texas Integrated Report - Water Bodies Added to the Texas 303(d) List

Explanation of Column Headings

- SegID and Name:** The unique identifier (SegID), segment name, and location of the water body. Items may be one of three types of numbers for SegID. The first type is a classified segment number (4 digits, e.g. 0218), as defined in the Texas Surface Water Quality Standards. The second type is an unclassified water body (e.g. 0218A), not defined in the Standards and associated with a classified water body because it is in the same watershed. The third type includes special Segments for Oyster Water Use (e.g. 2421OW) and Beach Watch Use (e.g. 2481CB) special areas. The segment name and description follow SegID.
- Parameter(s):** Pollutants or water quality conditions that assessment procedures indicate do not meet assigned water quality standards.
- Category:** One of three subcategories assigned to each impaired parameter to provide information about water quality status and management activities on that water body. The categories are defined below:
- Category 5: The water body does not meet applicable water quality standards or is threatened for one or more designated uses by one or more pollutants.
- Category 5a* - TMDLs are underway, scheduled, or will be scheduled for one or more parameters.
- Category 5b* - A review of the standards for one or more parameters will be conducted before a management strategy is selected, including the possible revision to the TSWQS.
- Category 5c* - Additional data or information will be collected and/or evaluated for one or more parameters before a management strategy is selected.
