

# Texas Counties with Bacteria-Impaired Water Bodies\*

*In lieu of notifying the proper authority, the applicant may become familiar with this document.*

The following counties contain waterways (rivers, lakes, or bays) where water quality monitoring has found elevated levels of bacteria. High concentrations of bacteria may pose a health risk to people who swim or wade in those waterways. Improper disposal of bacteria-laden wastes, such as those from septic systems, grease traps, and grit traps, may increase levels of bacteria in waterways.
