

Texas Counties with Bacteria-Impaired Water Bodies*

In lieu of notifying the proper authority, the applicant may become familiar with this document.

The following counties contain waterways (rivers, lakes, or bays) where water quality monitoring has found elevated levels of bacteria. High concentrations of bacteria may pose a health risk to people who swim or wade in those waterways. Improper disposal of bacteria-laden wastes, such as those from septic systems, grease traps, and grit traps, may increase levels of bacteria in waterways.
