**COMMENTS:** Questions Regarding Proposed Permit NO. WQ0015940001: 1) Will the wastewater treatment plant use UV light or chlorination as a method of disinfection? 2) If chlorination is used, will dechlorination follow? 3) What "Contaminants of Emerging Concern" will be screened for in the treated water? 4) What is the current evidence that it is safe for livestock to drink from Brushy Creek once the treated wastewater is discharged into it? 5) What guarantees do you have that toxic algae will not grow and thrive in Brushy Creek after the treated wastewater is discharged? (Algae is

toxic to cows). 6) Are you planning on "Primary treatment", or "Secondary treatment", or "Advanced or Tertiary Treatment"? 7) Will this be a combined sewer system? 8) What other options are there for an out of state landowners to review the application other than go to the Buda Public Library? 9) What water quality tests of Brushy Creek (and other waterways receiving the treated wastewater) will be done before the beginning of wastewater is discharged? 10) What water quality tests of Brushy Creek (and other waterways receiving the treated wastewater) will be done after the wastewater treatment plant is running? 11) How often will these water quality tests be done? 12) What will you test for in the water quality tests? 13) What safeguards will be in place to protect against untreated wastewater being discharged into the unnamed tributary and hence Brushy creek if the wastewater treatment plant has an electrical/power failure (Seattle 2017)? 14) Can you guarantee heavy metals and other toxic chemicals s will not be discharged into the unnamed tributary to Brushy Creek?
