COMMENTS: Please see the attached document for the comments submitted on behalf of the Greater Edwards Aquifer Alliance ("GEAA").

II. GEAA'S Comments

GVSUD Failed to Provide Information and Conduct Analysis Relating to the Existing Utility Providers in the Region and Costs of Connecting to Pre-Existing Services

GVSUD has not adequately demonstrated that the requested permit is compliant with the TCEQ rules on regionalization for the Cibolo Creek Region, found at 30 Tex. Admin. Code. § 351.61-65.

The Texas Water Code encourages and promotes the development and use of regional waste treatment systems. TCEQ regulations provide that new discharge permits within the Cibolo Creek regional area shall only be issued to the Cibolo Creek Municipal Authority, a designated regional wastewater provider.²

TCEQ regulations define the Cibolo Creek regional area as encompassing parts of the Cibolo Creek Watershed lying in the vicinity of numerous cities, including the City of Schertz. GVSUD's permit application states the Facility will serve planned residential and commercial growth in GVSUD's sewer CCN area, which is located at least partially in the city of Schertz. Given that the facility is intended to serve an area within the area designated for service by Cibolo Creek Municipal Authority, issuance of the permit to GVSUD violates 30 Tex. Admin. Code § 351.65.³

While the violation of Rule 351.65 itself bars issuance of the permit, GVSUD also did not provide complete information otherwise related to regionalization. The permit application does not indicate whether any Cities in the vicinity are willing and able to provide wastewater service to the proposed service area, as required in Technical Reports Section 1.B.⁴ In addition, GVSUD did not provide information related to the costs of connecting with other utilities in the area. Cost analysis allows for a determination as to whether the Facility is needed given other treatment options available. GVSUD's answers to Section 1.B.2 and 1.B.3 of the Technical Reports in the permit application were incomplete, so the proper analysis cannot have been performed.

GVSUD states in its application that the service area for the facility is not within another utility's CCN area.⁵ But, there is no map provided in the application to definitely bear out this claim. The only facts in the application—that the service area is partially in San Antonio, Schertz, and St. Hedwig—raise the strong possibility that the proposed service area is already served by an existing wastewater utility.

Analysis of Need for this Project

The Texas Water Code authorizes the TCEQ, in considering the issuance of a permit to discharge waste, to deny or alter the terms and conditions of the proposed permit based on consideration of need, including the expected volume and quality of the influent and the availability of existing or

² 30 Tex. Admin. Code § 351.65.

³ Considering the lack of need, and potential impacts upon water quality, GEAA does not believe that issuance of the requested permit to Cibolo Creek Municipal Authority would be appropriate, either.

⁴ Application page 21 of Technical Reports.

⁵ Application pages 21-22 of Technical Reports.

proposed areawide or regional waste treatment systems not designated by commission order.⁶ In other words, need is relevant regardless of the regionalization analysis discussed above.

Available information in the permit application indicates there is not a demonstrated need for this Facility. GVSUD provides the following justification of need: "The requested permit is proposed to support planned residential and commercial growth in GVSUD's sewer CCN area. GVSUD holds sewer CCN for proposed service area. The current contract for service equates to 950 EDUs of service or 232,750 gp[d]."⁷ However, the draft permit authorizes a final phase of 400,000 gpd of wastewater discharge, almost twice as much as GVSUD says in its application there is a need for. The lack of need for the facility justifies denial of GVSUD's application.

The Applicant Must Provide a Socioeconomic Justification for the Proposed Facility Pursuant to Tier 2 the State's Antidegradation Policy

Womans Hollow Creek meets Martinez Creek within three miles downstream of the discharge. See **Attachment A**. Martinez Creek is a perennial stream, according to TCEQ's 2020 Texas Integrated Reported on impaired water bodies. See **Attachment B**. This permit application triggers a full antidegradation review, which has not been performed yet.

Tier 1 of the Antidegradation Policy requires that existing uses and water quality sufficient to protect those existing uses must be maintained. Tier 2 of the Antidegradation Policy requires that no activities subject to regulatory action that would cause degradation of waters that exceed fishable/swimmable quality are allowed unless it can be shown to the commission's satisfaction that the lowering of water quality is necessary for important economic or social development.

Thus, in addition to the regionalization analysis, there must also be a Tier 2 analysis as to whether lowering water quality is necessary for important economic or social development.

This proposed discharge threatens to further degrade two water bodies already impaired for bacteria. Lower Cibolo Creek downstream of IH 10 until the confluence with the San Antonio River is an impaired water body for bacteria, listed in TCEQ's 2020 Texas Integrated Report for Clean Water Act Section 303(d) purposes.⁸ Martinez Creek is also a listed water body as impaired for bacteria. The GVSUD intends to eventually discharge 400,000 gallons per day into Womans Hollow Creek. This discharge has will increase bacteria content in those receiving water bodies.

Thank you for your consideration of these comments. We reserve the right to supplement these comments. Please contact me with any questions.

Respectfully Submitted,

/s/ John Bedecarre

COMMENTS: To Whom It May Concern: I am writing you today regarding the proposed sewage treatment plant. I have several major concerns with this. The first is my family's general health and well-being. Several family members are very sensitive to pollutants in the air and constantly deal with Asthma and Pneumonia. The N2O emissions and other chemicals greatly concern me. One of the reasons we bought acreage in St. Hedwig was to get away from the city pollutants. Another valid point is that our property values will plummet. Living on acreage has been a life long goal and

now that we are living this dream, we do not want to move because of the gases and foul odor that will be emitted from a treatment facility, when in fact no one in the area even uses sewers. We are all on septic systems and I do not approve of the fact that a sewage treatment plant will practically be in our backyard and pumping other individuals waste to our area. This will contaminate our plants, soil and adversely affect my family and animals health and I full intend to fight this alongside the many individuals of my community. There are many examples of lawsuits that are pending where the community is adversely affected by the chemicals and other airborne hazards and my hope in writing this is to persuade the facility to move to an area with less negative impact on the community. Sincerely, Christine Berry

COMMENTS: I am emailing in protest to the wastewater treatment plant proposed in our area. We moved to the countryside for cleaner and fresher air because my son has asthma. It has been beneficial since we've moved. However, I fear his health will be in jeopardy if your plant begins to use chemicals and the fumes from the black water will reach our house. I reached out to the mayor of Saint Hedwig and they did not know about this permit number. I do know why or if they are keeping a blind eye to things. But the fact that only certain residents within a small radius of the proposed site

received letters is very unethical. There are bigger pcs of property in less densely populated areas north of us that this can go to. Keep other peoples crap out of our neighborhood.

COMMENTS: I live less than one mile from the proposed site and can attest to errors provided on the initial application. That particular creek is very prone to flooding during rain/storm events. There are several small ranchers who use this waterway to supply water to their cattle. There are at least two areas of local roadway that would be flooded simply by the amount of water projected to be released at stage one. GVSUD did not present this project to the public, or those

impacted, until May 10th, 2021, while they project an initial construction start date of May 17, 2021. Note Representative Leo Pacheco has been contacted and, according to his staff, is actively pursuing a hearing on this matter.

COMMENTS: I want to express my disagreement with building a water treatment plant at 4060 Stapper Road in St Hedwig. This area is a residential setting of rural acreage. Many residents have cattle that drink out of the creek into which the plant will be releasing water. My family lives on ten acres across the street from where the plant will be built. The proposed sewer plant will completely change the residential atmosphere of our neighborhood and lower our property values, not to mention the noise, large truck traffic and smell that it will bring. There are industrial zones that

are better suited to service the sub-divisions' sewage sludge. The smell and noise will disrupt our otherwise normal lives, not to mention the agricultural and erosion implications. I understand the need for sewage treatment plants, but our community is a residential/agricultural area, and all of us are on septic systems. Please do not build this plant in the planned location. Please look elsewhere for an industrial area in which to build it. Thank you for your time and consideration. Cheryl Cole

COMMENTS: I am opposed to this sewage plant being installed to our neighborhood. This plant will bring havoc on our farms in our area by polluting the crops and causing our small farms to loose greatly. We are all on septic and none of us want all of the other new neighborhoods crap coming into our community contaminating the small creeks and water holding tanks that come thru our area that feeds water to some of the farm animals not alone as us having to deal with the smell .It will also cause a huge property value decrease for all of us property owners .We ask that you please

consider another location to put this plant in so that it doesn't affect the people of this community. Thank you Brenden Daigle

COMMENTS: I OPPOSE THIS WWTP AT THIS LOCATION AS IT WILL DRASTICALLY REDUCE THE VALUE OF MY HOME AND PROPERTY. I moved out here to get away from this type of stuff. Move it to the back yards of all these new housing developments that have caused the necessity for this to happen. Put it right in their front/back yard. the health and environmental issues that will come with this WWTP are astronomical. The worst smell is from the chemicals used to neutralize the waste and the effect they have on the atmosphere around it. It can attract flies and other pest that can

transmit disease and infestations. bioaerosols are a major concern. In previous studies, using personal samplers, it was shown that sewage treatment plant employees that have a higher incidence of headache, tiredness, and nausea were exposed to culturable bacteria. Exposure to rod-shaped bacteria and total number of bacteria was significantly higher in workers reporting headache during work than in workers not reporting headache. A few studies have shown that blood tests of workers who were subjected to aerosol inhalation indicated an increased level of antibodies against Gram negative bacteria and intestinal viruses. The condition has been described as "the sewage worker's syndrome," which has a viral origin and manifests itself with a despondency, overall weakness, catarrh, and fever [11, 18]. Main characteristics of the disease included general malaise, weakness, acute rhinitis, and fever [19], accompanied by gastrointestinal symptoms. In accordance with these studies, we recorded increased odds for the inhabitants who lived near the WTP to develop neurological and myoskeletal symptoms at 3.37 and 1.98 times, respectively. Moreover, sewage workers and those who live in the vicinity of a WTP have higher morbidity with intestinal and respiratory system illnesses [11, 20]. In order to ensure public health, health of workers, and good quality of life, it is necessary to determine the composition and concentration of microorganisms in the air. Skin contact, ingestion, and inhalation are the three major routes of exposure to airborne particles [20]. Microorganisms that are associated with intestinal infections such as *Salmonella* spp. and enteric viruses are thought to be transmitted through inhalation [4, 21]. Also, a nationwide survey in Sweden showed that an increased risk for headache, concentration difficulties, unusual tiredness, and head heaviness was reported in workers compared to the controls [18]. Similarly, in our study, feelings like tiredness and sickness were more reported by the cases compared to the controls. Interestingly, our study showed an increased rate in mental disorders to the population living near the WTP. There was no significant correlation of the WTP and the occurrence of gastrointestinal or myoskeletal symptoms to the residents. Also, this study showed no significant correlation concerning gastrointestinal, allergic, and respiratory symptoms although the study sample of the controls was rather small due to the refusal of controls (people in the city) to participate in the study. In our study, there is a significant presence of possible pathogenic microorganisms in the aerosols close to WTP and this concentration depended on the distance. There is indication of the burden of microorganisms in air according to the distance of the inhabitants. To establish aerosols impact on the human health, more extensive studies are needed including medical examinations in inhabitants. Such studies have not been performed to the area of the WTP. In order to lower the impact for public health, in areas like this, retaliatory preventive measures should be taken by the authorities in order to protect inhabitant's health. Such measures could be considered the tree growing around the WTP as well as the appropriate function of the WTP with protective equipment for the aerosols. Competing Interests The authors declare that they have no competing interests. References D. C. Blanchard and L. COMMENTS: I own land at 3872 Stapper Road and 3740 Stapper Road. Woman Hollering Creek runs on my property at both locations. My cattle rely on the creek for fresh water. My concern is the chemicals used in processing the waste water going into the creek plus flooding of my property. The fumes and chemicals from processing will affect my autoimmune disorder, my wife's inability to fight off infection from low white blood cell count plus our cattle's health

from drinking the water. Stapper Road is a densely inhabited community and a facility like this would be detrimental to all of us.

COMMENTS: I am very distressed about permit number WQ0015917001, concerning the water treatment plan by Green Valley Special Utility District. We are part of, and own, several generational farms on the properties with the Woman Hollering and Cibolo Creeks running through them. This proposed treatment plan will greatly affect our farms and way of life! I believe this is all due to the seemingly unlimited amount of sub-divisions being built just outside of the Saint Hedwig City Limits, which is unfair to those of us that live, love and make a living from our land. If GVSUD wants to

accommodate the new-comers then they should build the plant in Marion - which is where their board members live! I implore you to please take our, and my other Saint Hedwig neighbors, thoughts into serious consideration and withdraw or relocate the permit area for this project. Feel free to reach out to us if you have any questions or concerns. Sincerely,
Theodore and Victoria Kosub

COMMENTS: To whom it may concern: Building a sewer water treatment plant in a residential/farm land area when there are industrial zones near by such as IH 10 is absurd. The risks that this poses to our neighborhood will cause substantial changes to our local industry and residential lifestyle. The environmental impact should be considered a greater concern than moving this plant to an industrial site. The sewer plant contamination is a real cause of concern. The serenity and peaceful allure of our neighborhood will be greatly hampered if not destroyed by the smells, the

contamination and industrialization caused by the plant. All this should be taken into consideration as the local residents will not be using it since we all have paid to have our own septic systems. Very Concerned resident of Saint Hedwig,
Mary Lebo

COMMENTS: What impact will this plant have on our local farming and livestock raising area. There are multiple farms and ranches in the area that will be deeply impacted, if there are ever any issues with the structural integrity of the plant, not to mention being built on the creek if it does have a failure, that will run down and damage multiple properties. I for one am not willing to risk our properties when it seems there are better areas suited for such a plant in a less agricultural based area.

COMMENTS: Good afternoon,I would like to voice my objection to this water treatment plant. There are already too many waste water plants dumping into Martinez creek. With all the additional houses and streets being built up hill of the creek, the creek now comes out its banks with every rain. The water quaity is already poor and can not handle more waste water. A better solution would be to limit the volume of houses and restrict the new builds to larger lots a with on site septic systems.The people of Saint Hedwig very much do not want this this as we are down stream and down hill.

Please consider the long time residents and farms. If you proceed, our next step would be a class action suit or injunction. This would only waste money and time on both sides, as it will be stopped, with legal means even after construction has began. We will start to circulate petitions soon and seek legal council. Thank you are listening, Mark Maddox

COMMENTS: We have lived in the area for 40 years enjoying country life and fresh air. Since this is for the subdivisions put it next to them, not in our area. This is a propionate ag area. An area to be left alone. The values of our property will go down. Let alone the value our country fresh air and our peace of mind when it comes to a sewage plant.

COMMENTS: In talking to some people that I know in the area of this Waste Water Treatment Plant told me if this permit is approved it would give them a chance to sell the property that they own in the area for a higher price which would allow for further growth and expansion of the area thus improving the local economy tremendously.

COMMENTS: The Waste Water Treatment plant would be a great asset to the area as it would allow for clean and safe water to be placed into the local streams to be able to maintain a water flow in a drought. The safe and clean water would allow fish to live all year round and give them a place to spawn because when the stream goes dry in times of drought there is always a large number of Fish that die so please approve the Waste Water Treatment Plant.

(Written comments may be submitted at any time during the meeting)

Please give this form to the person at the information table. Thank you.

IS CIVICSD OR TECA going to
pay to rebuild New Berlin Rd.

over Woman Hollow Creek, so there
will be a way out for the
residents of New Berlin Rd., which
when the slightest bit of rain
causes this dry creek to flood
~~out~~ over New Berlin Rd.?

As there have been times
when my children were growing
up, could not go to school
because of this low water
area... IF 400,000 g/d is
being released this road
will be under water 30-45 days
a year. where these residents will
be in a bad situation.

COMMENTS: I am writing out of concern about the water treatment plant that is planed to be built on Stapper Road, Saint Hedwig, Texas, Bexar County. As a member of this area, I would like to request that this, is not done and approval revoked. I am concerned that this is going to cause more Cookie Cutter neighborhoods being built in our area and take away from our farms and country living. I have talked with others in the area and the citizens of this area are upset

about this water treatment plant. I am begging that you come out to our area and talk with the citizens about this and let our voices be heard, before more building of neighborhoods are built. Thank you, Susan Oldcorn

COMMENTS: I reside on Creekside Drive, which is approx. less than 1 mile from the proposed site. This water treatment plant would drastically affect my property value. My home is on a septic system and would not benefit from this plant. The creek running adjacent to my properties, which this WWTP would be linked, feeds local farms and livestock. If this permit is granted and this WWTP is built, I will seek compensation for the devaluation and buy-out of the five (5) properties I own.

COMMENTS: This sewage treatment plant is not wanted by anyone I am aware of who lives anywhere near the proposed site. Everyone here had to make arrangements for their own sewage in the form of septic systems before they were even allowed to build which seems like the responsible thing to do. I'm making the assumption that this plant is needed for the many new homes being constructed in the neighborhoods along FM 1518 and probably others still in the planning stages. Where sewage from these homes is going to go should have been thought of before the first house was

ever built. Coming along a couple of years after the fact and deciding to pump sewage into someone else's neighborhood for treatment is just wrong. This plant will apparently provide no service at all to the community in which it is to be built. Why are the builders not required to solve a problem like this before construction begins in a new neighborhood? I have absolutely nothing against the builders or the people buying those new homes, but they should not be allowed to pump their sewage into my neighborhood any more than I should be allowed to send mine to theirs. No doubt we will be told by someone who is not going to live next to it that this sewage plant will not smell and we'll hardly even notice it once it's up and running. If that were the case then why aren't they building it in the place where the sewage originates?

COMMENTS: First of all my family purchased the property at 4280 Stapper Road almost 70 years ago. My concern is when the creek stop running, and IT WILL, the waste will not move and will sit there and contaminate the soil and air, the surrounding areas and the water that livestock and wildlife depend on for clean water. That doesn't seem fair to the people who have been good stewards of the land.

COMMENTS: Please consider relocating this plant. While it might be necessary due to the explosion of property in Schertz and Cibolo, it will introduce a bigger volume of water into Cibolo Creek. Currently, the Creek is dry for much of the year (sans rain) north of I-10. It is only south of I-10 there is any water what so ever. Additional treated waters will increase the current level such that when a quantity of rain arrives over a short period of time (as occurred during the

past two weeks - end of May and beginning of June 2021), the rise of Cibolo Creek will be greater than current rise and additional flooding will occur to those who live near the creek.

COMMENTS: Green Valley SUD has submitted a request to the Texas Commission on Environmental Quality to build a wastewater treatment plant on Stapper Road in eastern Bexar County. This treatment plant is to be used for new subdivisions in Bexar County. The plant will be built in the extraterritorial district of the rural community of St. Hedwig. St. Hedwig is located in a Texas blackland prairie soil area and an alluvial area, which means the soil is particularly fertile. A significant part of the community engages in agriculture including raising cattle and other farm animals It is

unconscionable to introduce the environmental hazards that a waste treatment plant would present into such an agricultural rural community. The bacteria and soil contaminants that the plant would expel could destroy the livelihoods of these farming and ranching families. The immense amount of contaminated water that will be released into the creeks will not only endanger the farm animals and wildlife in the area, but also increase the likelihood of flooding homes, roads, and farmland. The residents in this pristine rural community would also have the odor of chemicals and sewage introduced into their lives, their children's lives, and on their property. The residents in the area of this proposed plant use septic tanks, therefore they will not receive any benefit from the plant. St. Hedwig will only receive the poison from the plant. Green Valley SUD proposing to build this plant, to benefit a new subdivision, in such a pristine rural community shows their disdain and antipathy towards the rural community in Bexar County. The City of St. Hedwig contends that Green Valley SUD's application for the permit includes incorrect statements and does not comply with the State's regionalization policy. The city is not convinced Green Valley SUD has justified the excessive and unnecessary amount of untreated effluent to be generated and has not satisfied water quality, antidegradation, and stream standard requirements. The residents of St. Hedwig request that TCEQ deny the application and draft permit by Green Valley SUD.

COMMENTS: I live at 4046 Stapper Road, Saint Hedwig, TX 78152. The proposed waste water treatment plant at 4060 Stapper Rd permit number WQ0015917001 will be incredibly close to my home as my north fence line is the proposed site's south fence line. I have owned this property for almost 8 years. My family and I have lived here for nearly 3 years. My wife and I have saved for the last decade to purchase and build our home where we could raise our 3 children in peace and safety. We have invested our life savings into this dream only to now be informed our safety, our health, our children's health, our livestock's health and our peace has been slated for destruction by the proposed waste water

treatment facility. My three young children who are 8, 6 and 4 years old have enjoyed playing and exploring on our 20 acres. They especially love playing in and exploring the Woman Hollering Creek that crosses our property. We have built a treehouse overlooking the creek in which we have spent many afternoons eating our lunch and watching the water go by. This plant will destroy the life we have come to enjoy. It will make the water untouchable, the air will become filled with rank odors along with any number of chemicals which will casue great harm to our bodies. I personally suffer from asthma and being so close to this treatment facility has the potential to threaten my life by destroying my already sensitive lungs. I pray this facility is not approved. If it is approved our property and home value will plummet and we will lose the savings in our home we had worked so hard to build for ourselves. My livestock use the water in the creek for drinking. I am also concerned they will suffer from drinking the contaminated water. My property borders this proposed site. I will look out my back window and where I now see beautiful trees and a vibrant creek I will see hideous tanks, and drying ponds. What is now a peaceful country setting with little to no traffic on our road will be turned into an industrial eyesore full of traffic, noise, air pollutants and water pollutants. I beg you please do not permit this site to be built. My family and I cannot live next to this facility and now we cannot even sell our property to be able to move. Please add me to the mailing and emailing list for this project along with other projects for this same applicant.

COMMENTS: I would like to formally voice my complaint and complete disagreement regarding the sewage treatment plant being considered for placement on 4060 Stapper Road in St Hedwig, Texas. I have been a resident of St. Hedwig on New Berlin Road for the last 21 years. THIS IS A RESIDENTIAL AND FARMING COMMUNITY!! Every home in our area has its own septic system yet you want to put in a sewer treatment plant in our neighborhood because of the subdivisions with the all the cookie cutter homes being built on FM 1518 and Abbott Rd. The last thing anyone in this community

wanted was to see housing subdivisions being built in our QUIET AND CLEAN COUNTRY TOWN!! This is completely ridiculous. OUR PROPERTY VALUES WILL PLUMMET!! It will be a noisy, smelly eyesore in our community. It will be unhealthy for our crops, and animals being raised. There are INDUSTRIAL ZONES in the area that are better suited to service the subdivisions sewage sludge. If these subdivisions need a sewage treatment plant, then put it across the street from them, let them deal with they eyesore that it will be and let them watch their home and property values plummet!!
