**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Jim Abbondante

To Whom It May Concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I formally request a public meeting to review this permit more closely. I also request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter.

I look forward to your response.

Regards,

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Dawn Albanese

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

POLLUTION IS A SIN.

WE MUST PROTECT God's Beautiful Creation.

I STRONGLY OPPOSE the Max Midstream project in the Matagorda and Lavaca Bays.

The company has been ARROGANTLY AND BLATANTLY SHOWING CONTEMPT FOR THE ENVIRONMENT AND THE HUMAN COMMUNITY.

The company's horrible behavior is bad enough -- but the Max Midstream project is SO BAD THAT YOU MUST REJECT IT.

The environmental impacts and other damages have not been adequately studied.

VOTERS HATE SUCH CORRUPTION.

Please add MY STRONG VOICE OF OPPOSITION into the record.

You must PREVENT Max Midstream from emitting toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community.

Also, I am OUTRAGED that Max Midstream's permit application claims that it does NOT NEED TO FOLLOW the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

VOTERS HATE SUCH CORRUPTION.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Subject: Reject Max Midstream's Air Permit!

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Sincerely,

Jim Anderson

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Karen Anderson

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing because I am concerned about the impact of the Max Midstream project in Matagorda and Lavaca Bays. I've been following this story and am appalled by the company's blatant disregard for the environment and the community. I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

This comment is being submitted because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

Thank you for granting a public meeting to review this permit more closely, but this is not enough. I request a contested case hearing in this matter to allow independent administrative law judges to review the facts. As TCEQ has noted, there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Charles Arnold

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

Frankly, I no longer think any such facilities should be allowed to be built not only near communities, but as a facility that releases pollutants into the air in the variety and quantities that in the past were allowed. We have to move away from this path. More science should be in a review of this proposition. Health factors for people, land, water and air need to be considered and why they feel they should not have the most modern methods of reducing the pollutants they will be creating should be reason enough to not allow this project to be approved. Safety of water, land, air, people and the ecosystems must be the base line protections and rules especially for new projects. We need to get the old ones improved and up to speed, or shut them down.

Do not ignore the voices of the people. They are the ones who will suffer the consequences of profits they won't see, but will live and die with the poisons it produces.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
KENNETH BAER  
91 6th Ave

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Dana Barela

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Joan Baseman

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

We ALL need Clean Water - and this proposal has too many risks!

As a former Houston resident that still cares about the area, I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Elaine Becker

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am birder who from Arkansas & I make several trips to the Texas Gulf Coast each spring & every fall. I am concerned about the overall impact of the Max Midstream project in the Matagorda & Lavaca Bays. I am also concerned that TCEQ expedited this permit application too quickly without the proper scientific review.

I am also concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm humans, birds & aquatic life.

Why has Max Midstream claimed that it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants? Allowing this permit to proceed without the most stringent pollution controls & monitoring would be mistake.

Birders from all over the U.S., Canada & Europe spend a lot of our money to travel & to see rare birds here. If an industrial complex like this is built here then we will find other places to visit

Thank you for scheduling a public meeting to review this permit more closely. We need a hearing in this matter to allow independent administrative law judges review the facts.

Sincerely,

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

NO more allowing rich shmucks to pollute and put people and marine life in danger-  
-STOP the poisoning of our Environment.

I look forward to your response.---- Rachel Berg

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

I look forward to your response.

To Whom It May Concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Dana Bleckinger

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Stephen Boletchek

**Subject:** Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)

To Whom It May Concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

I look forward to your response.

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

GLOBAL WARMING IS THE WORST PROBLEM WE FACE!!! This project should not be built at all!! It just adds more global warming pollutants to the atmosphere.

I am very concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. I have been following this story. I am appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this. I learned from Earthworks that Max Midstream is planning on digging through mercury and on not providing any pollution control methods as for some unknown reason they "are not needed." GARBAGE! If they cared about the workers on the project and about the people living there, they would control their various emissions and pollution of the environment.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ. TCEQ should deny the permit altogether!!

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Ken Bowman

**Subject:** Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)

To Whom It May Concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

I look forward to your response.

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Carrie Breen

To Whom It May Concern:

There are so many reasons why this project must be halted. Besides the huge amounts of dangerous chemicals released, the dredging of the bay will put the final death blow to the bay. Let's put more emphasis on tourism, fishing, protecting the fragile ecosystems. In turn, that may help decrease the severity of climate events. Let's create a healthier planet rather than destroying it.

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

**Subject:** Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)

To Whom It May Concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

I look forward to your response.

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Rev. Max Burg

Subject: Reject Max Midstream's Air Permit!

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Sincerely,

Claire Bush

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
T C

Texas Commission on Environmental Quality (TCEQ)

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Thank you,  
jean cameron

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Rebecca Canright

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. Subject: Reject Max Midstream's Air Permit!

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Sincerely,

**To:** CHIEFCLK <[chiefclk@tceq.texas.gov](mailto:chiefclk@tceq.texas.gov)>  
**Subject:** Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)

To Whom It May Concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

I look forward to your response.

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am a TCEQ retiree and water quality specialist. I am concerned about the impact of the Max Midstream project in the Matagorda and Lavaca Bays. I am appalled by the company's disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny. Dredging contaminated bay sediments is a potentially catastrophic risk. Further, Max Midstream seems to have no experience operating a facility like this.

I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology. Such a project requires the most stringent pollution controls and monitoring.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.

I look forward to your response.

Sincerely,  
Bill Carter

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
STACIE CHARLEBOIS

**Subject:** Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)

To Whom It May Concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

I look forward to your response.

Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Bertha Civeira

**Re: Texas Campaign for the Environment and San Antonio Bay Estuarine Waterkeeper's  
Supplement to their Contested Case Hearing Requests Concerning Draft Air Quality  
Permit No. 162941**

Dear Ms. Gharis,

On November 12, 2020, Diane Wilson and San Antonio Bay Estuarine Waterkeeper ("Waterkeeper") requested a contested case hearing concerning Max Midstream Texas LLC's ("Max Midstream") application for Air Quality Permit No. 162941, which would authorize construction of new facilities and the modification of existing facilities at the company's Seahawk Terminal in Point Comfort, Texas. On June 4, 2021, Waterkeeper supplemented its original hearing request to identify additional issues for consideration at a contested case hearing and to identify two additional Waterkeeper members who satisfy the criteria for affected persons found at 30 Tex. Admin. Code § 55.203. Then, on August 17, 2021, Diane Wilson and Waterkeeper supplemented their previous hearing requests, and Texas Campaign for the Environment requested a contested case hearing on Max Midstream's permit application. With this filing, Texas Campaign for the Environment and Waterkeeper supplement their previous filings in this matter to identify two additional affected persons.

Mr. Curtis Miller is a member of Waterkeeper and Texas Campaign for the Environment and is an affected person for purposes of Waterkeeper and Texas Campaign for the Environment's contested case hearing requests in this matter. Mr. Miller owns and operates Miller Seafood Company, Inc. located 1102 Broadway St., Port Lavaca Texas 77979. Miller Seafood Company, Inc. is located approximately 4.8 miles from the Seahawk Terminal and sells shrimp and oysters harvested from the surrounding Bays, including Lavaca and Matagorda Bays. The company was started in the mid-1960's by Mr. Curtis' grandfather and has remained in the Miller family since that time. Mr. Miller also owns four commercial fishing boats that he occasionally works on but are mostly crewed by paid staff. These commercial ships shrimp and oyster in the Bays near Port Lavaca, including Lavaca and Matagorda Bays. The Miller family has witnessed harmful changes

to fishing, shrimping, and oystering from the increase in industry in the Port Lavaca and Point Comfort area. This includes increased usage of estuary waters which impacts oyster habitats by changing freshwater flows to the Bays. The dredging of the Matagorda Ship Channel, to accommodate larger crude tankers exporting oil from the Seahawk facility, will impact oyster habitats in the dredge and disposal sites. In addition, any increased freshwater usage by the expanded Seahawk facility will impact oyster habitats. Reduced oyster habitats will negatively impact Mr. Miller's business, which relies on selling oysters from the Bays immediately adjacent to the Seahawk facility and the Matagorda Ship Channel.

Mr. Miller will also be impacted by changes to the air quality from emissions from the Seahawk facility expansion. Mr. Miller spends between 50 and 60 hours a week at Miller Seafood Company, Inc. in Port Lavaca less than five miles from the facility. In his personal time, he fishes on the Matagorda and Lavaca Bays one to two times a month. During these trips, he often fishes at Mitchell's Reef, which is located at N 28°37.613' W 96°34.383'. Mitchell's Reef is just over 2 miles from the Seahawk facility. (Figure 1, below). Mr. Miller suffers from asthma and other respiratory issues. He is currently under the care of a pulmonologist. Increased air emissions from the Seahawk expansion will worsen Mr. Miller's respiratory health and interfere with his work and recreational activities in the area. Additionally, particulate matter from the terminal will eventually settle in the surrounding Bays impacting the nutrient balance in coastal waters. The terminal's carbon dioxide emissions will also contribute to the acidification of coastal waters, which is known to negatively impact oysters.<sup>1</sup>

**Figure 1 – Distance from Mitchell's Reef to Seahawk Facility**

<sup>1</sup> See e.g., Mathew Tresaugue, *Rising acidity of Texas Bays concerns scientists*, Houston Chronicle (Mar. 17, 2015). Available at <https://www.houstonchronicle.com/news/science-environment/article/Rising-acidity-of-Texas-bays-concerns-scientists-6139904.php>. See also, NOAA, *Ocean Acidification's Impact on Oysters and Other Shellfish*. Available at <https://www.pmel.noaa.gov/co2/story/Ocean+Acidification%27s+impact+on+oysters+and+other+shellfish> (last visited Dec. 22, 2021).

Mr. Mauricio Blanco lives across Lavaca Bay, approximately five miles southwest of the Seahawk Terminal. Mr. Blanco is a member of Waterkeeper and Texas Campaign for the Environment and is an affected person for purposes of Waterkeeper and Texas Campaign for the Environment's contested case hearing requests in this matter. Mr. Blanco has made a living shrimping and oystering in Matagorda and Lavaca Bays for approximately 30 years. Like Mr. Miller, Mr. Blanco is concerned that air pollution from construction and operation of the Seahawk facility expansion, along with the dredging of the bay will interfere with his livelihood and threaten his health and well-being, along with the health and well-being of his family and the local fishing community.

Mr. Miller and Mr. Blanco's businesses are dependent on the maintenance of habitable Bays for shrimp, fish, and oysters. Additional emissions from the Seahawk facility will change the habitability of the Bays and negatively affect Mr. Miller and Mr. Blanco's businesses and increase their exposure to unhealthy air pollution where they live and work. Accordingly, Mr. Miller and Mr. Blanco are affected persons and Waterkeeper and Texas Campaign for the Environment have standing to participate as parties in a contested case hearing challenging Max Midstream's application for Air Quality Permit No. 162941.

Sincerely,

/s/ Gabriel Clark-Leach

**Re: Comments and Contested Case Hearing Request Concerning Max Midstream Texas LLC's Application for Air Quality Permit No. 162941 Authorizing the Construction of New and Modified Facilities at its Seahawk Terminal in Point Comfort, Texas**

Dear Ms. Gharis,

Diane Wilson, San Antonio Bay Estuarine Waterkeeper ("Waterkeeper"), Texas Campaign for the Environment, Environmental Integrity Project, and Texas Rio Grande Legal Aid ("Commenters") appreciate this opportunity to comment on and to request a contested case hearing concerning Max Midstream Texas LLC's ("Max Midstream") application for Air Quality Permit No. 162941 ("Draft Permit"), which, if approved, would authorize a significant expansion of the company's Seahawk Terminal ("Terminal") located in Point Comfort, Texas.

**I. Contested Case Hearing Request**

Texas Campaign for the Environment requests a contested case hearing on Max Midstream's application and the Draft Permit. Texas Campaign for the Environment is a nonprofit membership organization dedicated to informing and mobilizing Texans to protect their health, their communities, and the environment. Texas Campaign for the Environment works to promote strict enforcement of anti-pollution laws designed to stop or clean up air, water, and waste pollution. Texas Campaign for the Environment has thousands of Texas members, including members who live and work near the Terminal.

Texas Campaign for the Environment requests a contested case hearing on the same contested issues of fact and law Commenters have previously identified in their comments on Max

Midstream's application<sup>1</sup> and Draft Permit,<sup>2</sup> as well as issues raised in these comments. All communications regarding Texas Campaign for the Environment's contested case hearing request should be directed to Gabriel Clark-Leach, Senior Attorney at the Environmental Integrity Project.

## **II. Comments Regarding Contested Issues of Material Fact and Law**

### **A. The Draft Permit May be a "Sham Permit."**

Max Midstream's air permit application is only one part of a massive undertaking that, if approved, will transform the very shape of Matagorda Bay. Most notably, Max Midstream has pledged to spend \$360,000,000 to deepen and widen the Matagorda Ship Channel to facilitate increased traffic of larger barges to and from the Terminal. In addition to this dredging project and the proposed Terminal expansion, Max Midstream is constructing storage tanks at its Edna, Texas location and has plans to construct additional storage capacity at its 77 Station. *Max Midstream to Start Texas Crude Exports in May*, S&P Global Platts, April 6, 2021.<sup>3</sup> Each phase of this project threatens significant environmental harm and faces strong local opposition. Once authorizations for each phase of this project are given and the massive outlay of capital necessary to realize the project has been finalized, it will be very difficult to stop the project if any portion of the project fails to comply with applicable environmental regulations. For that reason, it is critical for the TCEQ to ensure that the Terminal will maintain emissions below the maximum rates authorized by the Draft Permit and that air quality impacts from Terminal expansion, along with secondary emissions from sources interconnected with the Terminal, are protective of public health and the environment *before* authorizing construction of the proposed Terminal expansion.

Commenters are concerned that Max Midstream has intentionally mischaracterized the planned scope of its Terminal expansion to avoid Prevention of Significant Deterioration ("PSD") review, which would trigger additional pollution control requirements, require Max Midstream to model ozone impacts from the Terminal, and require Max Midstream to perform more robust modeling for other pollutants. According to statements given by Max Midstream's president to S&P Global Platts, Max Midstream intends to construct storage capacity at the Terminal beyond that represented in its air permit application as soon as 2023. *Id.* Specifically, Max Midstream's president said that the company plans to construct 6,000,000 barrels of capacity at the Terminal, while Max Midstream's application seeks authorization for storage tanks with a combined capacity of only 4,800,000 barrels. *See* Table A-2, as Updated on January 20, 2021. Additionally, Max

Midstream has indicated that operations at the Terminal should not be subject to throughput limits, suggesting that Max Midstream plans to increase throughput to Terminal loading and storage facilities in the near future. Application dated October 2020 at 5-1 (“Specifically, rather than limiting throughputs, Max Midstream proposes to manage the facilities included in this application such that the permitted emission limits are not exceeded.”).<sup>4</sup>

The practice of obtaining a minor New Source Review authorization where there the applicant intends to operate a major source is called “sham permitting” and sham permits are void *ab initio*. EPA, *New Source Review Workshop Manual* at A.9 (Draft, October 1990) (“[A] permit condition that temporarily restricts production to a level at which the source does not intend to operate for any extensive time is not valid if it appears to be intended to circumvent the preconstruction review requirements for major source[s] by making the source temporarily mind.”). Given the significant cost of Max Midstream’s various proposed projects in and surrounding Matagorda Bay and Max Midstream’s plans to build additional capacity into the Terminal shortly after the Draft Permit is finalized, the TCEQ must require Max Midstream to show that the Terminal, as represented in the present air permit application, is economically feasible. Evidence that the Terminal, as represented, is not economically feasible would strongly suggest that the Draft Permit is a sham permit. *Id.* (“An example [of a sham permit] is construction of an electric power generating unit, which is proposed to be operated as a peaking unit but which by its nature can only be economical if it is used as a base-load facility.”). Unfortunately, the record for this matter does not contain evidence establishing that the Terminal expansion, as proposed, is economically feasible.

Accordingly, Diane Wilson, Waterkeeper, and Texas Campaign for the Environment raise the following questions for consideration at a contested case hearing:

- Whether the Draft Permit is a sham permit taken to circumvent PSD preconstruction permitting requirements; and
- Whether Max Midstream’s impacts demonstration improperly excluded secondary emissions from sources and proposed sources that are interconnected with the Terminal.

**B. Expert Report Supports Commenters’ Demonstration that the Terminal Expansion Project Triggers Prevention of Significant Deterioration Preconstruction Permitting Requirements.**

Commenters’ previous filings in this matter demonstrate that Max Midstream’s Terminal should be treated as a major source of air pollution, subject to the Clean Air Act’s stringent PSD preconstruction permitting requirements, and that the TCEQ’s proposal to authorize the Terminal as a minor source of air pollution is arbitrary and capricious. First Comments at 2-3; Second Comments at 7-15. Commenters now offer the expert report of Ranajit Sahu, Ph.D., QEP, CEM

---

<sup>4</sup> Max Midstream’s application suggests that its represented maximum throughput does not establish such a limit. That is incorrect. 30 Tex. Admin. Code § 116.116(a)(1) provides that application representations with regard to construction and operation of a source become enforceable conditions of the permit.

into the record in support of this demonstration. Attachment A, *Expert Report on Certain Aspects of Max Midstream Texas LLC Draft Air Quality Permit No. 162941* (“Expert Report”).

Consistent with Commenters’ demonstration, Dr. Sahu opines that the Terminal expansion project is subject to PSD major source requirements because the synthetic minor emission limits established by the Draft Permit are not practically enforceable and, therefore, fail to limit the Terminal’s physical capacity to emit NO<sub>x</sub>, CO, and VOC above the 100 ton per year major source threshold. As Dr. Sahu explains, the notion that artificial constraints must be practically enforceable to effectively limit a source’s potential to emit is well-established under EPA policy and makes good intuitive sense: “synthetic minor emission limits a source cannot continuously meet and monitoring methods that cannot reliably detect exceedances of synthetic minor limits do not ensure that a source authorized by a synthetic minor permit will maintain its emissions below the major source threshold.” Expert Report at 1-2. Dr. Sahu also explains that the loading loss equation Max Midstream relies upon to calculate controlled and uncontrolled VOC emissions for loading activities builds in a margin of error that is much greater than the margin of difference between the Draft Permit’s synthetic minor emission limits and the major source threshold, *id.* at 2-4, that the need to combust additional VOC loading losses in quantities well-within the probable margin of error built into the loading loss equation Max Midstream used would likely lead NO<sub>x</sub> and CO emissions from Max Midstream’s Vapor Combustion Units (“VCUs”) to cause exceedances of the major source threshold, *id.* at 8-9, and that the control efficiencies and emission factors Max Midstream used to calculate emission limits in the Draft Permit are unsupported and unreasonable. *Id.* at 4-9.

### **III. Conclusion**

Commenters appreciate the opportunity to file these comments and this hearing request and reserve the right to provide additional information on the matters discussed in this document as allowed by the Clean Air Act, the Texas Clean Air Act, and regulations implementing these statutes.

Sincerely,

/s/ Gabriel Clark-Leach

## Expert Report on Certain Aspects of

### Max Midstream Texas LLC Draft Air Quality Permit No. 162941

by

Dr. Ranajit (Ron) Sahu, Consultant<sup>1</sup>

#### A. Introduction

If finalized, Texas Commission on Environmental Quality (“TCEQ”) Draft Air Quality Permit No. 162941 (“Draft Permit”) will authorize Max Midstream Texas LLC (“Max Midstream”) to construct a significant expansion of its existing Seahawk Terminal (“Terminal”), located in Point Comfort, Texas. I have been retained by the Environmental Integrity Project to offer my expert opinion on the question of whether Max Midstream’s proposed expansion project should be subject to Prevention of Significant Deterioration (“PSD”) preconstruction permitting requirements for major sources. After a careful review of the record in this matter, I have concluded that this project triggers the Clean Air Act’s PSD preconstruction permitting requirements and that the TCEQ’s proposal to authorize the project with a minor source permit is unreasonable.

Specifically, it is my opinion that the Terminal, as modified, will be a major stationary source of CO, NO<sub>x</sub>, and VOC (ozone). A major stationary source is “[a]ny stationary source that emits, *or has the potential to emit*, a threshold quantity of emissions or more of any contaminant (including volatile organic compounds ... ) for which a national ambient air quality standard has been issued[.]”<sup>2</sup> The Terminal is a major source CO, NO<sub>x</sub>, and VOC because it will have the physical capacity to emit these pollutants at rates that exceed the applicable PSD significance threshold of 100 tons per year (“TPY”) that apply to these pollutants and because the synthetic minor limits Max Midstream has taken to avoid PSD preconstruction permitting requirements do not effectively limit the Terminal’s potential to emit.

According to longstanding EPA policy, synthetic minor emission limits only constrain a source’s potential to emit (“PTE”) if they are practically enforceable.<sup>3</sup> EPA guidance clarifies that practically enforceable synthetic minor permits must contain technically accurate emission limits, *i.e.* limits based on the most representative data available, and specify reliable methods for accurately determining compliance with those emission limits.<sup>4</sup> This policy makes good sense, because synthetic minor emission limits a source cannot continuously meet and monitoring

---

<sup>1</sup> Resume provided in Attachment A.

<sup>2</sup> 30 Tex. Admin. Code § 116.12(19) (emphasis added).

<sup>3</sup> See *e.g.*, EPA, *New Source Review Workshop Manual*, at A.5 (Draft October 1990) (“For any limit or condition to be a legitimate restriction on potential to emit, that limit or condition must be federally-enforceable, which in turn requires practical enforceability.”)

<sup>4</sup> *Id.*; see also U.S. Environmental Protection Agency, Office of Inspector General, Report No. 21-P-0175 (“Synthetic Minor Report”) at 8-16 (July 8, 2021) (summarizing EPA policy regarding synthetic minor limits), available electronically at: [https://www.epa.gov/system/files/documents/2021-07/epa\\_oig\\_20210708-21-p-0175.pdf](https://www.epa.gov/system/files/documents/2021-07/epa_oig_20210708-21-p-0175.pdf)

methods that cannot reliably detect exceedances of synthetic minor limits do not ensure that a source authorized by a synthetic minor permit will maintain its emissions below the major source threshold. Therefore, such a source still has the potential to emit criteria pollutants at a rate that exceeds the major source threshold, and is, by definition, a major stationary source. As I explain below, the Draft Permit is not practically enforceable because the permit record fails to establish that the emission limits it imposes are technically accurate and because the Draft Permit fails to require monitoring sufficient to accurately determine compliance with the relevant emission limits.

**B. Max Midstream’s Representations About the Terminal’s PTE are Unsupported and Unreasonable.**

According to Max Midstream’s updated application, the expanded Seahawk Terminal will emit pollutants at the following rates:<sup>5</sup>

**Table 1: Represented Potential to Emit (PTE)**

<b>Pollutant</b>	<b>Tons Per Year</b>	<b>Major Modification Threshold (TPY)</b>
CO	97.35	100
NO <sub>x</sub>	97.03	100
PM/PM <sub>10</sub> /PM <sub>2.5</sub>	11.12	100
SO <sub>2</sub>	21.93	100
Ozone (as VOC)	84.15	100
Ozone (as NO <sub>x</sub> )	97.03	100

As others have indicated in prior comments, the expanded Terminal will have the physical capacity to emit pollution far above the significance threshold of 100 tons per year that triggers PSD preconstruction permitting requirements.<sup>6</sup> Thus, the expansion project triggers PSD preconstruction permitting requirements, unless the permit authorizing the project establishes practically enforceable “synthetic” limitations for criteria pollutants, like NO<sub>x</sub>, CO, and VOC (an ozone precursor), ensuring that emissions of these pollutants will remain below the 100 ton per year PSD significance threshold.<sup>7</sup>

In this case, Max Midstream has identified constraints on loading rates, operating time, and material composition that are intended to establish enforceable constraints on the Terminal’s PTE. However, these constraints alone are not sufficient to show that actual emissions from the Terminal will remain below the applicable PSD significance threshold.

Max Midstream also relies on “emission factors,” which are predictions about how much pollution sources and activities at the Terminal will emit per the unit of activity that the Draft Permit will authorize, in order to calculate the PTE of various pollutants, given the artificial constraints on

<sup>5</sup> Per Max Midstream, PI-1 General Application Table dated November 2020.

<sup>6</sup> Comments and Contested Case Hearing Request Concerning Max Midstream Texas LLC’s Application for Permit No. 162941, Authorizing an Expansion of the Company’s Seahawk Terminal, Located in Calhoun County, Texas, filed on November 12, 2020, at 2-3.

<sup>7</sup> See 30 Tex. Admin. Code § 116.160(c) (describing additional requirements that apply to PSD major modifications).

utilization of equipment at the Terminal. For example, where Max Midstream has proposed a cap on the combustion capacity or utilization of combustion sources in terms of MMBtu/hour or year, it relies on emission factors that predict how much pollution per MMBtu equipment at the Terminal will emit to calculate the Terminal's PTE for a given pollutant. These emission factors are taken from various sources, including TCEQ guidance documents, EPA's AP-42 emission factors compilation, vendor guarantees that may or may not exist, and other undisclosed sources. If the Draft Permit is approved, these emission factors become conditions of the air permit.<sup>8</sup>

Unfortunately, Max Midstream failed to show that these emission factors reliably predict the PTE from the Terminal, given the proposed utilization constraints,<sup>9</sup> and the Draft Permit fails to establish monitoring requirements to verify these emission factors and to make them practically enforceable.<sup>10</sup> As a critical example, the loading loss calculation methodology Max Midstream relies upon to calculate VOC emissions from loading activities at its terminal has a built-in margin of error of plus or minus 30%<sup>11</sup> and Max Midstream has been unable to produce any vendor guarantees supporting its representations regarding VOC, NO<sub>x</sub>, and CO emissions from its vapor combustion units ("VCUs").<sup>12</sup> Given this critical deficiency, and instead of requiring Max Midstream to install continuous emission monitors ("CEMS") to determine compliance with the Draft Permit's synthetic minor marine dock VCU emission caps, the Draft Permit allows Max Midstream to demonstrate compliance with emission limits calculated using these unsupported emission factors by conducting a single stack test.<sup>13</sup> A single stack test, consisting of the usual three runs over a period of few hours cannot capture the variability of the emissions and cannot resolve the underlying +/- 30% uncertainty of the emissions calculation methodology, which could be even greater than this error range.

Further, this method (i.e., single stack test) of determining compliance with the Draft Permit's emission caps is unacceptable, because the performance of Max Midstream's VCUs during a single stack test is not a reliable measure of the controls' performance across all operating scenarios authorized by the Draft Permit. There are various factors that affect a VCU's performance, including changes in the volumetric flow rate and composition of the materials being combusted. Thus, Max Midstream contends that it would not be practical to establish throughput limits for the various materials it will handle at the Terminal, "due to the varying nature of crude oils and crude oil condensates and customer markets at the terminal."<sup>14</sup> Given this variability, the

<sup>11</sup> AP-42, Section 5.2 at 5.2-4.

Available at: [https://www.epa.gov/sites/production/files/2020-09/documents/5.2\\_transportation\\_and\\_marketing\\_of\\_petrolium\\_liquids.pdf](https://www.epa.gov/sites/production/files/2020-09/documents/5.2_transportation_and_marketing_of_petrolium_liquids.pdf)

<sup>12</sup> While Max Midstream initially indicated that its representations regarding VCU VOC DRE and VCU NO<sub>x</sub> and CO emission rates were based upon a vendor guarantee, see Max Midstream Application at 5-2, Max Midstream subsequently admitted that it has not obtained any such guarantee. Max Midstream Response to Permit No. 162941 Additional Information Request (declining to provide vendor data, because "[t]he vendor selection process is currently underway and a final decision on vendors has yet to be made.").

<sup>13</sup> Draft Permit, Special Condition No. 18.

<sup>14</sup> Application, at 5-1.

very high level of control represented and the utter lack of margin between Max Midstream's represented PTE and the corresponding PSD significance threshold, the Draft Permit must require more robust monitoring to make its synthetic minor emission caps practically enforceable.

Specifically, Max Midstream should be required to use VOC, NO<sub>x</sub>, and CO CEMS to monitor emissions from its VCUs and to assure compliance with its synthetic minor permit limits across all the different operating conditions authorized by the Draft Permit. Otherwise, Max Midstream should be required to obtain a PSD permit before constructing the Terminal expansion, because the synthetic limits it took to avoid PSD are not practically enforceable and do not effectively limit the Terminal's PTE.

The margin of error built into the AP-42 loading loss equation Max Midstream uses to calculate potential VOC emissions from its Terminal also undermines Max Midstream's representations regarding potential NO<sub>x</sub> and CO emissions from its VCUs. Even if one presumes that the NO<sub>x</sub> and CO emission factors Max Midstream uses to calculate emissions from its VCUs are accurate (which they are not), Max Midstream's representations of the emissions from its VCUs depends upon the Company's assumptions about the quantity and composition of VOCs that will be diverted into those controls. It should be noted that it is only an assumption that an increase in loading losses will cause a linear increase in NO<sub>x</sub> and/or CO emissions (i.e., using a constant emission factor for these pollutants, independent of VOC loading rate) from Max Midstream's VCUs, given that the composition of the loading displacement gas will not be constant, which can therefore affect the heat content, and that, in turn can affect the NO<sub>x</sub> and CO emissions from the VCUs. Accordingly, it is unreasonable for Max Midstream to rely on an equation that has a probable error rate of at least 30% to calculate loading losses from the Terminal that will be routed to its VCUs to demonstrate that the project is minor, when a mere increase of 4% in the amount of NO<sub>x</sub> or CO emitted from the VCUs would likely trigger major NSR requirements.

**Table 2 – Terminal Expansion NO<sub>x</sub> and CO Emissions Increases**

<b>Pollutant</b>	<b>Represented Source-Wide Emissions (TPY)</b>	<b>Major Source Threshold (TPY)</b>	<b>Difference (TPY)</b>	<b>4% of Marine Control Emissions Cap (TPY)</b>
NO <sub>x</sub>	97.03	100	2.97	3.5
CO	97.35	100	2.65	3.5

#### **B1. Max Midstream Failed to Justify Its Use of AP-42 Emission Factors and Equations To Estimate PTE**

Max Midstream's application and the TCEQ's review of that application rely heavily upon EPA's AP-42 emission factors to calculate the Terminal's PTE, which in turn provides the basis for Max Midstream's air quality impacts analyses and BACT demonstrations. Specifically, Max Midstream relies upon AP-42 emission factors to calculate maximum VOC emissions from its storage tanks, VOC emissions during marine vessel loading, PM/PM<sub>10</sub>/PM<sub>2.5</sub> and SO<sub>2</sub> emissions from VCU assist gas, and emissions from vacuum truck and frac tank loading.

**Table 3 – Bases for Max Midstream Application Emission Calculations Relying on AP-42**

Unit/Activity/Pollutant	Basis	Application Page #
Storage Tank – Routine working and breathing emissions, VOC	AP-42, Section 7.1 (March 2020)	5-1
Storage Tank – Short-term emission rates, VIC	AP-42, Section 7 equations and TCEQ guidance document APDG 6419 ver. 2 (February 2020)	5-1
Storage Tank – Floating roof landing losses, VOC (MSS)	AP-42, Section 7.1.3.1. (March 2020)	5-4
Storage Tank – Refilling losses, VOC (MSS)	AP-42, Section 7.1.3.3.1	5-5
Marine Vessel Loading – Loading Losses, VCU VOC	AP-42, Section 5.2, Equation 1	5-2
VCU PM/PM <sub>10</sub> /PM <sub>2.5</sub> , SO <sub>2</sub>	AP-42 Section 1.4	5-2
Emergency Flare, SO <sub>2</sub>	AP-42, Section 1.4	5-3
Vacuum Truck and Frac Tank Loading VOC (MSS)	AP-42, Section 5.2	5-6

The previous section of this report showed that Max Midstream’s reliance on AP-42, Section 5.2, Equation 1 to calculate loading losses is problematic because that equation already has an error rate of 30%, while a margin of error of less than 9% for VOC and less than 4% for NO<sub>x</sub> or CO would be sufficient to trigger PSD permitting requirements. Max Midstream’s reliance on AP-42 emission factors to calculate emissions from loading activities, storage tanks, and other equipment at the Terminal is also problematic because, as a general matter, AP-42 emission factors do not reliably predict emissions from specific sources and should not be used to establish or demonstrate compliance with permit limits.

AP-42 is a compilation of air pollutant emission factors developed by EPA, which has been published since 1972.<sup>15</sup> These emission factors were developed to provide approximations of average emissions from certain *kinds* of activities and equipment. They were not intended to be used as the primary point of reference for source-specific permitting and enforcement. According to EPA, an AP-42 emission factor is:

“...a representative value that attempts to relate the quantity of a pollutant released to the atmosphere with an activity associated with the release of that pollutant. These factors are usually expressed as the weight of pollutant divided by a unit weight, volume, distance, or duration of the activity emitting the pollutant (e.g., kilograms of particulate emitted per megagram of coal burned). Such factors facilitate estimation of emissions from various sources of air pollution. *In most cases, these factors are simply averages of all available data of acceptable quality, and are generally assumed to be representative of long-term averages for all facilities in the source category (i.e., a population average).*”<sup>16</sup>

<sup>15</sup> Available at: <https://www.epa.gov/air-emissions-factors-and-quantification/ap-42-compilation-air-emissions-factors>

<sup>16</sup> AP-42 (1995), Introduction at 1 (underlining in original, italics added). Available at: <https://www.epa.gov/sites/production/files/2020-09/documents/c00s00.pdf>

EPA has long warned and recently reaffirmed that AP-42 emission “factors are not likely to be accurate predictors of emissions from any one specific source, except in very limited scenarios.”<sup>17</sup> Specifically, EPA has explained that “[u]se of these factors as source-specific permit limits ... is not recommended by EPA.”<sup>18</sup> This is so:

“[B]ecause emission factors essentially represent an average of a range of emission rates, approximately half of the subject sources will have emission rates greater than the emission factor and the other half will have emission rates less than the factor. As such, a permit limit using an AP-42 emission factor would result in half of the sources being in noncompliance...”<sup>19</sup>

In the Enforcement Alert released just last year, EPA emphasized an additional reason that AP-42 emission factors should not be used to establish or determine compliance with source-specific emission limits:

“With the advent of 1-hour and short-term National Ambient Air Quality Standards (NAAQS), permit limits must be able to account for short term fluctuations. AP-42 emission factors also do not account for short term variation in emissions as the emission factors are intended for use in developing area-wide annual or triannual inventories. In developing emission factors, test data are typically taken from normal operating conditions and generally avoid conditions that can cause short-term fluctuations in emissions. These short-term fluctuations in emissions can stem from variations in process conditions, control device conditions, raw materials, ambient conditions, or other similar factors. This means that if facilities use AP-42 emission factors as permit limits, facilities increase their chances of violating their short-term permit limits. It also increases the likelihood of a geographic area’s non-compliance with the NAAQS.”<sup>20</sup>

Thus, because Max Midstream failed to justify its reliance on AP-42 emission factors to establish emission limits in the Draft Permit, the record fails to support a determination that such limits are technically accurate and practically enforceable. Accordingly, these emission limits do not effectively limit the Terminal’s PTE below applicable PSD major source thresholds.

If the TCEQ wishes to allow Max Midstream to rely on AP-42 emission factors and the AP-42 loading loss equation to limit the Terminal’s PTE, the agency must establish monitoring methods that are sufficient to determine whether emissions from the Terminal are verifiably the same as the generic emission factors used to establish the Draft Permit’s synthetic minor limits. Otherwise, the only enforceable constraints on Max Midstream’s PTE are the operational limits represented in the application, which do not ensure that emissions from the Terminal will remain below the applicable significance thresholds unless emissions from the Terminal are consistent with the

---

<sup>17</sup> EPA Reminder About Inappropriate Use of AP-42 Emission Factors, Publication No. EPA 325-N-20-001 (November, 2020) (“Enforcement Alert”). Available at: <https://www.epa.gov/sites/production/files/2021-01/documents/ap42-enforcementalert.pdf>

<sup>18</sup> AP-42 (1995), Introduction at 1.

<sup>19</sup> *Id.* (emphasis added).

<sup>20</sup> Enforcement Alert, at 1-2.

practically unenforceable emission factors used. To make the Draft Permit's synthetic minor limits enforceable, the TCEQ must at least require Max Midstream to operate NO<sub>x</sub>, CO, and VOC CEMS on its VCUs and to use optical gas imaging to monitor for fugitive VOC leaks. Without such continuous, direct monitoring, the synthetic limits Max Midstream has agreed to are not practically enforceable and cannot be used to avoid PSD preconstruction permitting requirements. If this is unacceptable to Max Midstream, the TCEQ should require the company to apply for a PSD permit, because the synthetic limits taken to avoid triggering these requirements are not otherwise practically enforceable.

Max Midstream also claims—without support—that its proposed emergency flare will not emit *any* particulate matter (“PM”). Completely eliminating all PM from flares is impossible, especially for flares, like the one that Max Midstream proposes to construct, that are not steam assisted. AP-42 indicates that PM from flares most often falls within a range of 0-274 lb/million BTU.<sup>21</sup> However, there is no technical basis for the low end of this range, namely zero emissions. It is simply incorrect to assume that Max Midstream will be able to *completely* eliminate PM emissions from its flare on a continuous basis. Thus, potential PM emissions from the Terminal represented by Max Midstream's application and used to model air quality from the Terminal almost certainly fail to account for all PM that the Terminal will actually and unavoidably emit.

Before the TCEQ can finalize the Draft Permit, it must establish monitoring, testing, and recordkeeping requirements sufficient to assure continuous compliance with the zero PM emissions representation or require Max Midstream to use a more realistic particulate matter emission rate to model air quality impacts from its emergency flare. Monitoring sufficient to ensure continuous compliance is critical, because “[w]ith the advent of ... short-term National Ambient Air Quality Standards [, including 24-hour standards for PM<sub>2.5</sub> and PM<sub>10</sub>,] permit limits must be able to account for short term fluctuations.”<sup>22</sup>

## **B2. The Draft Permit Fails to Assure That Max Midstream Will Comply with Application Representations Regarding the Destruction and Removal Efficiency (“DRE”) of Its Proposed VCUs**

According to Max Midstream's initial application, the represented NO<sub>x</sub> and CO emission rates from the proposed VCUs as well as the represented VCU VOC DRE of at least 99.9% were “based on vendor guaranteed emission factors and a vapor heat content of 20,000 Btu/lb.”<sup>23</sup> However, when the TCEQ asked Max Midstream to provide this vendor data so that Max Midstream's emissions calculations could be verified, Max Midstream replied that it has not actually obtained a vendor guarantee:

“[T]he vendor selection process is currently underway and a final decision on vendors has yet to be made. However, the attached updated Table A-6 VCU NO<sub>x</sub> and CO emission factors are representative of vapor control devices installed at

---

<sup>21</sup> AP-42, Section 13.5, 13.5-4 (Table 13.5-1). Available at: [https://www3.epa.gov/ttnchie1/ap42\\_ch13/final/c13s05.pdf](https://www3.epa.gov/ttnchie1/ap42_ch13/final/c13s05.pdf)

<sup>22</sup> Enforcement Alert, at 1.

<sup>23</sup> Application at 5-2 and 5-5.

similar terminals and achieve controls which exceed recent BACT determinations.”<sup>24</sup>

Max Midstream’s application represents an aggressive and very high VOC DRE of 99.9% at a relatively low minimum combustion temperature of 1,400 F. This DRE is so high, in fact, that Max Midstream contends that it cannot be confirmed by stack testing.<sup>25</sup> To address this possibility, the Draft Permit allows Max Midstream to demonstrate compliance with the 99.9% DRE representation by maintaining VOC emissions from the VCUs at or below 10 ppm at 3% O<sub>2</sub> during the initial stack test.<sup>26</sup>

There are numerous problems with Max Midstream’s DRE representations. First, Max Midstream attempts to downplay its initial misrepresentation that the represented VCU DRE is supported by a vendor guarantee by explaining that the represented DRE is also consistent with “vapor control devices installed at similar terminals and achieve controls which exceed recent BACT determinations.” But Max Midstream failed to identify any of these similar sources, failed to show that any of these facilities has demonstrated ongoing compliance with a 99.9% DRE requirement, and did not provide information showing that these other VCUs would be able to continuously achieve a 99.9% DRE under conditions comparable to those at the Terminal and with inlet gas flows and compositions similar to those which will occur at the Terminal. It is not enough for Max Midstream to assert that controls at other unspecified sources have achieved the “beyond BACT” level of control the company has represented it can achieve to avoid triggering PSD requirements (and Max Midstream has not even done this). Max Midstream must also demonstrate that its source will continuously achieve that level of control.<sup>27</sup>

Max Midstream also failed to demonstrate that the proposed alternative measure of compliance for its VCUs’ VOC DRE, i.e., 10 ppmv at 3% O<sub>2</sub>, is equivalent to the represented 99.9 % DRE. If Max Midstream is allowed to use this alternative to demonstrate compliance with its permit, the company should also be required to use this alternative, allowable emission rate to model crude-related air quality impacts.

Finally, it should be noted that Max Midstream has to meet all of its conditions simultaneously, at all times. Specifically, it is not clear how Max Midstream will show compliance with its aggressive VOC DRE representation while also complying with the represented emission rates for NO<sub>x</sub> and CO from the VCUs. According to Max Midstream’s application, the VCUs will achieve a VOC DRE of 99.9%, so long as the combustion zone temperature is maintained above 1,400 F.<sup>28</sup> This is a relatively low combustion zone temperature, and it is unclear that it will be sufficient to maintain the represented DRE across all operating scenarios. For example, Max Midstream indicates that its emergency flare will maintain a temperature of 1,832 F to achieve a much lower DRE between 98 and 99%. Additionally, Max Midstream’s February 2021 update to its emission calculations indicates that the operating temperature for its VCUs will be 1,600 F and not 1,400 F

---

<sup>24</sup> Response to TCEQ, dated November 20, 2020 at Response 6.

<sup>25</sup> See email from Neal Nygaard to Ariel Ramirez, dated February 1, 2021 (“Modern VCUs are capable of achieving control at levels which result in stack exit concentrations that may be below the applicable monitoring detection limits.”).

<sup>26</sup> Draft Permit, Special Condition 14.

<sup>27</sup> 30 Tex. Admin. Code § 116.111(a)(2)(G).

<sup>28</sup> Draft Permit, Special Condition 17(A).

required by the Draft Permit.<sup>29</sup> Given these obvious inconsistencies in Max Midstream's application representations, and given the fact that increasing the VCU combustion zone temperature will result in higher NO<sub>x</sub> emissions, the TCEQ should require Max Midstream to install VOC, NO<sub>x</sub>, and CO CEMs on its VCUs to determine the proper combustion zone temperature necessary to comply with the represented DRE and to clarify whether this temperature can be maintained without exceeding represented NO<sub>x</sub> and CO emission rates taken to avoid triggering PSD preconstruction requirements. If this measure is unacceptable to Max Midstream, the TCEQ should require the company to apply for a PSD permit, because the synthetic limits taken to avoid triggering these requirements are not otherwise practically enforceable.

---

<sup>29</sup> See Annual Crude/Crude Condensate Inputs Table, dated February 2021.

## **Attachment A – Resume**

**RANAJIT (RON) SAHU, Ph.D, QEP, CEM (Nevada)**

**CONSULTANT, ENVIRONMENTAL AND ENERGY ISSUES**

**311 North Story Place**

**Alhambra, CA 91801**

**Phone: 702.683.5466**

**e-mail (preferred): [ronsahu@gmail.com](mailto:ronsahu@gmail.com); [sahuron@earthlink.net](mailto:sahuron@earthlink.net)**

### **EXPERIENCE SUMMARY**

Dr. Sahu has over thirty one years of experience in the fields of environmental, mechanical, and chemical engineering including: program and project management services; design and specification of pollution control equipment for a wide range of emissions sources including stationary and mobile sources; soils and groundwater remediation including landfills as remedy; combustion engineering evaluations; energy studies; multimedia environmental regulatory compliance (involving statutes and regulations such as the Federal CAA and its Amendments, Clean Water Act, TSCA, RCRA, CERCLA, SARA, OSHA, NEPA as well as various related state statutes); transportation air quality impact analysis; multimedia compliance audits; multimedia permitting (including air quality NSR/PSD permitting, Title V permitting, NPDES permitting for industrial and storm water discharges, RCRA permitting, etc.), multimedia/multi-pathway human health risk assessments for toxics; air dispersion modeling; and regulatory strategy development and support including negotiation of consent agreements and orders.

He has over twenty eight years of project management experience and has successfully managed and executed numerous projects in this time period. This includes basic and applied research projects, design projects, regulatory compliance projects, permitting projects, energy studies, risk assessment projects, and projects involving the communication of environmental data and information to the public.

He has provided consulting services to numerous private sector, public sector and public interest group clients. His major clients over the past twenty six years include various trade associations as well as individual companies such as steel mills, petroleum refineries, chemical plants, cement manufacturers, aerospace companies, power generation facilities, lawn and garden equipment manufacturers, spa manufacturers, chemical distribution facilities, land development companies, and various entities in the public sector including EPA, the US Dept. of Justice, several states (including Oregon, New Mexico, Pennsylvania, and others), various agencies such as the California DTSC, and various municipalities. Dr. Sahu has performed projects in all 50 states, numerous local jurisdictions and internationally.

In addition to consulting, for approximately twenty years, Dr. Sahu taught numerous courses in several Southern California universities including UCLA (air pollution), UC Riverside (air pollution, process hazard analysis), and Loyola Marymount University (air pollution, risk assessment, hazardous waste management). He also taught at Caltech, his alma mater (various engineering courses), at the University of Southern California (air pollution controls) and at California State University, Fullerton (transportation and air quality).

Dr. Sahu has and continues to provide expert witness services in a number of environmental areas discussed above in both state and Federal courts as well as before administrative bodies (please see Annex A).

### **EXPERIENCE RECORD**

2000-present **Independent Consultant.** Providing a variety of private sector (industrial companies, land development companies, law firms, etc.), public sector (such as the US Department of Justice), and

public interest group clients with project management, environmental consulting, project management, as well as regulatory and engineering support consulting services.

1995-2000 Parsons ES, **Associate, Senior Project Manager and Department Manager for Air Quality/Geosciences/Hazardous Waste Groups**, Pasadena. Responsible for the management of a group of approximately 24 air quality and environmental professionals, 15 geoscience, and 10 hazardous waste professionals providing full-service consulting, project management, regulatory compliance and A/E design assistance in all areas.

Parsons ES, **Manager for Air Source Testing Services**. Responsible for the management of 8 individuals in the area of air source testing and air regulatory permitting projects located in Bakersfield, California.

1992-1995 Engineering-Science, Inc. **Principal Engineer and Senior Project Manager** in the air quality department. Responsibilities included multimedia regulatory compliance and permitting (including hazardous and nuclear materials), air pollution engineering (emissions from stationary and mobile sources, control of criteria and air toxics, dispersion modeling, risk assessment, visibility analysis, odor analysis), supervisory functions and project management.

1990-1992 Engineering-Science, Inc. **Principal Engineer and Project Manager** in the air quality department. Responsibilities included permitting, tracking regulatory issues, technical analysis, and supervisory functions on numerous air, water, and hazardous waste projects. Responsibilities also include client and agency interfacing, project cost and schedule control, and reporting to internal and external upper management regarding project status.

1989-1990 Kinetics Technology International, Corp. **Development Engineer**. Involved in thermal engineering R&D and project work related to low-NOx ceramic radiant burners, fired heater NOx reduction, SCR design, and fired heater retrofitting.

1988-1989 Heat Transfer Research, Inc. **Research Engineer**. Involved in the design of fired heaters, heat exchangers, air coolers, and other non-fired equipment. Also did research in the area of heat exchanger tube vibrations.

## EDUCATION

1984-1988 Ph.D., Mechanical Engineering, California Institute of Technology (Caltech), Pasadena, CA.

1984 M. S., Mechanical Engineering, California Institute of Technology (Caltech), Pasadena, CA.

1978-1983 B. Tech (Honors), Mechanical Engineering, Indian Institute of Technology (IIT) Kharagpur, India

## TEACHING EXPERIENCE

### Caltech

"Thermodynamics," Teaching Assistant, California Institute of Technology, 1983, 1987.

"Air Pollution Control," Teaching Assistant, California Institute of Technology, 1985.

"Caltech Secondary and High School Saturday Program," - taught various mathematics (algebra through calculus) and science (physics and chemistry) courses to high school students, 1983-1989.

"Heat Transfer," - taught this course in the Fall and Winter terms of 1994-1995 in the Division of Engineering and Applied Science.

"Thermodynamics and Heat Transfer," Fall and Winter Terms of 1996-1997.

### U.C. Riverside, Extension

"Toxic and Hazardous Air Contaminants," University of California Extension Program, Riverside, California. Various years since 1992.

"Prevention and Management of Accidental Air Emissions," University of California Extension Program, Riverside, California. Various years since 1992.

"Air Pollution Control Systems and Strategies," University of California Extension Program, Riverside, California, Summer 1992-93, Summer 1993-1994.

"Air Pollution Calculations," University of California Extension Program, Riverside, California, Fall 1993-94, Winter 1993-94, Fall 1994-95.

"Process Safety Management," University of California Extension Program, Riverside, California. Various years since 1992-2010.

"Process Safety Management," University of California Extension Program, Riverside, California, at SCAQMD, Spring 1993-94.

"Advanced Hazard Analysis - A Special Course for LEPCs," University of California Extension Program, Riverside, California, taught at San Diego, California, Spring 1993-1994.

"Advanced Hazardous Waste Management" University of California Extension Program, Riverside, California. 2005.

#### Loyola Marymount University

"Fundamentals of Air Pollution - Regulations, Controls and Engineering," Loyola Marymount University, Dept. of Civil Engineering. Various years since 1993.

"Air Pollution Control," Loyola Marymount University, Dept. of Civil Engineering, Fall 1994.

"Environmental Risk Assessment," Loyola Marymount University, Dept. of Civil Engineering. Various years since 1998.

"Hazardous Waste Remediation" Loyola Marymount University, Dept. of Civil Engineering. Various years since 2006.

#### University of Southern California

"Air Pollution Controls," University of Southern California, Dept. of Civil Engineering, Fall 1993, Fall 1994.

"Air Pollution Fundamentals," University of Southern California, Dept. of Civil Engineering, Winter 1994.

#### University of California, Los Angeles

"Air Pollution Fundamentals," University of California, Los Angeles, Dept. of Civil and Environmental Engineering, Spring 1994, Spring 1999, Spring 2000, Spring 2003, Spring 2006, Spring 2007, Spring 2008, Spring 2009.

#### International Programs

"Environmental Planning and Management," 5 week program for visiting Chinese delegation, 1994.

"Environmental Planning and Management," 1 day program for visiting Russian delegation, 1995.

"Air Pollution Planning and Management," IEP, UCR, Spring 1996.

"Environmental Issues and Air Pollution," IEP, UCR, October 1996.

#### PROFESSIONAL AFFILIATIONS AND HONORS

President of India Gold Medal, IIT Kharagpur, India, 1983.

Member of the Alternatives Assessment Committee of the Grand Canyon Visibility Transport Commission, established by the Clean Air Act Amendments of 1990, 1992.

American Society of Mechanical Engineers: Los Angeles Section Executive Committee, Heat Transfer Division, and Fuels and Combustion Technology Division, 1987-mid-1990s.

Air and Waste Management Association, West Coast Section, 1989-mid-2000s.

#### **PROFESSIONAL CERTIFICATIONS**

EIT, California (#XE088305), 1993.

REA I, California (#07438), 2000.

Certified Permitting Professional, South Coast AQMD (#C8320), since 1993.

QEP, Institute of Professional Environmental Practice, since 2000.

CEM, State of Nevada (#EM-1699). Expiration 10/07/2021.

#### **PUBLICATIONS (PARTIAL LIST)**

"Physical Properties and Oxidation Rates of Chars from Bituminous Coals," with Y.A. Levendis, R.C. Flagan and G.R. Gavalas, *Fuel*, **67**, 275-283 (1988).

"Char Combustion: Measurement and Analysis of Particle Temperature Histories," with R.C. Flagan, G.R. Gavalas and P.S. Northrop, *Comb. Sci. Tech.* **60**, 215-230 (1988).

"On the Combustion of Bituminous Coal Chars," PhD Thesis, California Institute of Technology (1988).

"Optical Pyrometry: A Powerful Tool for Coal Combustion Diagnostics," *J. Coal Quality*, **8**, 17-22 (1989).

"Post-Ignition Transients in the Combustion of Single Char Particles," with Y.A. Levendis, R.C. Flagan and G.R. Gavalas, *Fuel*, **68**, 849-855 (1989).

"A Model for Single Particle Combustion of Bituminous Coal Char." Proc. ASME National Heat Transfer Conference, Philadelphia, **HTD-Vol. 106**, 505-513 (1989).

"Discrete Simulation of Cenospheric Coal-Char Combustion," with R.C. Flagan and G.R. Gavalas, *Combust. Flame*, **77**, 337-346 (1989).

"Particle Measurements in Coal Combustion," with R.C. Flagan, in "**Combustion Measurements**" (ed. N. Chigier), Hemisphere Publishing Corp. (1991).

"Cross Linking in Pore Structures and Its Effect on Reactivity," with G.R. Gavalas in preparation.

"Natural Frequencies and Mode Shapes of Straight Tubes," Proprietary Report for Heat Transfer Research Institute, Alhambra, CA (1990).

"Optimal Tube Layouts for Kamui SL-Series Exchangers," with K. Ishihara, Proprietary Report for Kamui Company Limited, Tokyo, Japan (1990).

"HTRI Process Heater Conceptual Design," Proprietary Report for Heat Transfer Research Institute, Alhambra, CA (1990).

"Asymptotic Theory of Transonic Wind Tunnel Wall Interference," with N.D. Malmuth and others, Arnold Engineering Development Center, Air Force Systems Command, USAF (1990).

"Gas Radiation in a Fired Heater Convection Section," Proprietary Report for Heat Transfer Research Institute, College Station, TX (1990).

"Heat Transfer and Pressure Drop in NTIW Heat Exchangers," Proprietary Report for Heat Transfer Research Institute, College Station, TX (1991).

"NOx Control and Thermal Design," Thermal Engineering Tech Briefs, (1994).

"From Purchase of Landmark Environmental Insurance to Remediation: Case Study in Henderson, Nevada," with Robin E. Bain and Jill Quillin, presented at the AQMA Annual Meeting, Florida, 2001.

"The Jones Act Contribution to Global Warming, Acid Rain and Toxic Air Contaminants," with Charles W. Botsford, presented at the AQMA Annual Meeting, Florida, 2001.

**PRESENTATIONS (PARTIAL LIST)**

"Pore Structure and Combustion Kinetics - Interpretation of Single Particle Temperature-Time Histories," with P.S. Northrop, R.C. Flagan and G.R. Gavalas, presented at the AIChE Annual Meeting, New York (1987).

"Measurement of Temperature-Time Histories of Burning Single Coal Char Particles," with R.C. Flagan, presented at the American Flame Research Committee Fall International Symposium, Pittsburgh, (1988).

"Physical Characterization of a Cenospheric Coal Char Burned at High Temperatures," with R.C. Flagan and G.R. Gavalas, presented at the Fall Meeting of the Western States Section of the Combustion Institute, Laguna Beach, California (1988).

"Control of Nitrogen Oxide Emissions in Gas Fired Heaters - The Retrofit Experience," with G. P. Croce and R. Patel, presented at the International Conference on Environmental Control of Combustion Processes (Jointly sponsored by the American Flame Research Committee and the Japan Flame Research Committee), Honolulu, Hawaii (1991).

"Air Toxics - Past, Present and the Future," presented at the Joint AIChE/AAEE Breakfast Meeting at the AIChE 1991 Annual Meeting, Los Angeles, California, November 17-22 (1991).

"Air Toxics Emissions and Risk Impacts from Automobiles Using Reformulated Gasolines," presented at the Third Annual Current Issues in Air Toxics Conference, Sacramento, California, November 9-10 (1992).

"Air Toxics from Mobile Sources," presented at the Environmental Health Sciences (ESE) Seminar Series, UCLA, Los Angeles, California, November 12, (1992).

"Kilns, Ovens, and Dryers - Present and Future," presented at the Gas Company Air Quality Permit Assistance Seminar, Industry Hills Sheraton, California, November 20, (1992).

"The Design and Implementation of Vehicle Scrapping Programs," presented at the 86th Annual Meeting of the Air and Waste Management Association, Denver, Colorado, June 12, 1993.

"Air Quality Planning and Control in Beijing, China," presented at the 87th Annual Meeting of the Air and Waste Management Association, Cincinnati, Ohio, June 19-24, 1994.

## Annex A

### Expert Litigation Support

#### A. Occasions where Dr. Sahu has provided Written or Oral testimony before Congress:

1. In July 2012, provided expert written and oral testimony to the House Subcommittee on Energy and the Environment, Committee on Science, Space, and Technology at a Hearing entitled “Hitting the Ethanol Blend Wall – Examining the Science on E15.”

#### B. Matters for which Dr. Sahu has provided affidavits and expert reports include:

2. Affidavit for Rocky Mountain Steel Mills, Inc. located in Pueblo Colorado – dealing with the technical uncertainties associated with night-time opacity measurements in general and at this steel mini-mill.
3. Expert reports and depositions (2/28/2002 and 3/1/2002; 12/2/2003 and 12/3/2003; 5/24/2004) on behalf of the United States in connection with the Ohio Edison NSR Cases. *United States, et al. v. Ohio Edison Co., et al.*, C2-99-1181 (Southern District of Ohio).
4. Expert reports and depositions (5/23/2002 and 5/24/2002) on behalf of the United States in connection with the Illinois Power NSR Case. *United States v. Illinois Power Co., et al.*, 99-833-MJR (Southern District of Illinois).
5. Expert reports and depositions (11/25/2002 and 11/26/2002) on behalf of the United States in connection with the Duke Power NSR Case. *United States, et al. v. Duke Energy Corp.*, 1:00-CV-1262 (Middle District of North Carolina).
6. Expert reports and depositions (10/6/2004 and 10/7/2004; 7/10/2006) on behalf of the United States in connection with the American Electric Power NSR Cases. *United States, et al. v. American Electric Power Service Corp., et al.*, C2-99-1182, C2-99-1250 (Southern District of Ohio).
7. Affidavit (March 2005) on behalf of the Minnesota Center for Environmental Advocacy and others in the matter of the Application of Heron Lake BioEnergy LLC to construct and operate an ethanol production facility – submitted to the Minnesota Pollution Control Agency.
8. Expert Report and Deposition (10/31/2005 and 11/1/2005) on behalf of the United States in connection with the East Kentucky Power Cooperative NSR Case. *United States v. East Kentucky Power Cooperative, Inc.*, 5:04-cv-00034-KSF (Eastern District of Kentucky).
9. Affidavits and deposition on behalf of Basic Management Inc. (BMI) Companies in connection with the BMI vs. USA remediation cost recovery Case.
10. Expert Report on behalf of Penn Future and others in the Cambria Coke plant permit challenge in Pennsylvania.
11. Expert Report on behalf of the Appalachian Center for the Economy and the Environment and others in the Western Greenbrier permit challenge in West Virginia.
12. Expert Report, deposition (via telephone on January 26, 2007) on behalf of various Montana petitioners (Citizens Awareness Network (CAN), Women’s Voices for the Earth (WVE) and the Clark Fork Coalition (CFC)) in the Thompson River Cogeneration LLC Permit No. 3175-04 challenge.
13. Expert Report and deposition (2/2/07) on behalf of the Texas Clean Air Cities Coalition at the Texas State Office of Administrative Hearings (SOAH) in the matter of the permit challenges to TXU Project Apollo’s eight new proposed PRB-fired PC boilers located at seven TX sites.
14. Expert Testimony (July 2007) on behalf of the Izaak Walton League of America and others in connection with the acquisition of power by Xcel Energy from the proposed Gascoyne Power Plant – at the State of Minnesota, Office of Administrative Hearings for the Minnesota PUC (MPUC No. E002/CN-06-1518; OAH No. 12-2500-17857-2).

15. Affidavit (July 2007) Comments on the Big Cajun I Draft Permit on behalf of the Sierra Club – submitted to the Louisiana DEQ.
16. Expert Report and Deposition (12/13/2007) on behalf of Commonwealth of Pennsylvania – Dept. of Environmental Protection, State of Connecticut, State of New York, and State of New Jersey (Plaintiffs) in connection with the Allegheny Energy NSR Case. *Plaintiffs v. Allegheny Energy Inc., et al.*, 2:05cv0885 (Western District of Pennsylvania).
17. Expert Reports and Pre-filed Testimony before the Utah Air Quality Board on behalf of Sierra Club in the Sevier Power Plant permit challenge.
18. Expert Report and Deposition (October 2007) on behalf of MTD Products Inc., in connection with *General Power Products, LLC v MTD Products Inc.*, 1:06 CVA 0143 (Southern District of Ohio, Western Division) .
19. Expert Report and Deposition (June 2008) on behalf of Sierra Club and others in the matter of permit challenges (Title V: 28.0801-29 and PSD: 28.0803-PSD) for the Big Stone II unit, proposed to be located near Milbank, South Dakota.
20. Expert Reports, Affidavit, and Deposition (August 15, 2008) on behalf of Earthjustice in the matter of air permit challenge (CT-4631) for the Basin Electric Dry Fork station, under construction near Gillette, Wyoming before the Environmental Quality Council of the State of Wyoming.
21. Affidavits (May 2010/June 2010 in the Office of Administrative Hearings)/Declaration and Expert Report (November 2009 in the Office of Administrative Hearings) on behalf of NRDC and the Southern Environmental Law Center in the matter of the air permit challenge for Duke Cliffside Unit 6. Office of Administrative Hearing Matters 08 EHR 0771, 0835 and 0836 and 09 HER 3102, 3174, and 3176 (consolidated).
22. Declaration (August 2008), Expert Report (January 2009), and Declaration (May 2009) on behalf of Southern Alliance for Clean Energy in the matter of the air permit challenge for Duke Cliffside Unit 6. *Southern Alliance for Clean Energy et al., v. Duke Energy Carolinas, LLC*, Case No. 1:08-cv-00318-LHT-DLH (Western District of North Carolina, Asheville Division).
23. Declaration (August 2008) on behalf of the Sierra Club in the matter of Dominion Wise County plant MACT.us
24. Expert Report (June 2008) on behalf of Sierra Club for the Green Energy Resource Recovery Project, MACT Analysis.
25. Expert Report (February 2009) on behalf of Sierra Club and the Environmental Integrity Project in the matter of the air permit challenge for NRG Limestone's proposed Unit 3 in Texas.
26. Expert Report (June 2009) on behalf of MTD Products, Inc., in the matter of *Alice Holmes and Vernon Holmes v. Home Depot USA, Inc., et al.*
27. Expert Report (August 2009) on behalf of Sierra Club and the Southern Environmental Law Center in the matter of the air permit challenge for Santee Cooper's proposed Pee Dee plant in South Carolina).
28. Statements (May 2008 and September 2009) on behalf of the Minnesota Center for Environmental Advocacy to the Minnesota Pollution Control Agency in the matter of the Minnesota Haze State Implementation Plans.
29. Expert Report (August 2009) on behalf of Environmental Defense, in the matter of permit challenges to the proposed Las Brisas coal fired power plant project at the Texas State Office of Administrative Hearings (SOAH).
30. Expert Report and Rebuttal Report (September 2009) on behalf of the Sierra Club, in the matter of challenges to the proposed Medicine Bow Fuel and Power IGL plant in Cheyenne, Wyoming.
31. Expert Report (December 2009) and Rebuttal reports (May 2010 and June 2010) on behalf of the United States in connection with the Alabama Power Company NSR Case. *United States v. Alabama Power Company*, CV-01-HS-152-S (Northern District of Alabama, Southern Division).
32. Pre-filed Testimony (October 2009) on behalf of Environmental Defense and others, in the matter of challenges to the proposed White Stallion Energy Center coal fired power plant project at the Texas State Office of Administrative Hearings (SOAH).

33. Pre-filed Testimony (July 2010) and Written Rebuttal Testimony (August 2010) on behalf of the State of New Mexico Environment Department in the matter of Proposed Regulation 20.2.350 NMAC – *Greenhouse Gas Cap and Trade Provisions*, No. EIB 10-04 (R), to the State of New Mexico, Environmental Improvement Board.
34. Expert Report (August 2010) and Rebuttal Expert Report (October 2010) on behalf of the United States in connection with the Louisiana Generating NSR Case. *United States v. Louisiana Generating, LLC*, 09-CV100-RET-CN (Middle District of Louisiana) – Liability Phase.
35. Declaration (August 2010), Reply Declaration (November 2010), Expert Report (April 2011), Supplemental and Rebuttal Expert Report (July 2011) on behalf of the United States in the matter of DTE Energy Company and Detroit Edison Company (Monroe Unit 2). *United States of America v. DTE Energy Company and Detroit Edison Company*, Civil Action No. 2:10-cv-13101-BAF-RSW (Eastern District of Michigan).
36. Expert Report and Deposition (August 2010) as well as Affidavit (September 2010) on behalf of Kentucky Waterways Alliance, Sierra Club, and Valley Watch in the matter of challenges to the NPDES permit issued for the Trimble County power plant by the Kentucky Energy and Environment Cabinet to Louisville Gas and Electric, File No. DOW-41106-047.
37. Expert Report (August 2010), Rebuttal Expert Report (September 2010), Supplemental Expert Report (September 2011), and Declaration (November 2011) on behalf of Wild Earth Guardians in the matter of opacity exceedances and monitor downtime at the Public Service Company of Colorado (Xcel)’s Cherokee power plant. No. 09-cv-1862 (District of Colorado).
38. Written Direct Expert Testimony (August 2010) and Affidavit (February 2012) on behalf of Fall-Line Alliance for a Clean Environment and others in the matter of the PSD Air Permit for Plant Washington issued by Georgia DNR at the Office of State Administrative Hearing, State of Georgia (OSAH-BNR-AQ-1031707-98-WALKER).
39. Deposition (August 2010) on behalf of Environmental Defense, in the matter of the remanded permit challenge to the proposed Las Brisas coal fired power plant project at the Texas State Office of Administrative Hearings (SOAH).
40. Expert Report, Supplemental/Rebuttal Expert Report, and Declarations (October 2010, November 2010, September 2012) on behalf of New Mexico Environment Department (Plaintiff-Intervenor), Grand Canyon Trust and Sierra Club (Plaintiffs) in the matter of *Plaintiffs v. Public Service Company of New Mexico (PNM)*, Civil No. 1:02-CV-0552 BB/ATC (ACE) (District of New Mexico).
41. Expert Report (October 2010) and Rebuttal Expert Report (November 2010) (BART Determinations for PSCo Hayden and CSU Martin Drake units) to the Colorado Air Quality Commission on behalf of Coalition of Environmental Organizations.
42. Expert Report (November 2010) (BART Determinations for TriState Craig Units, CSU Nixon Unit, and PRPA Rawhide Unit) to the Colorado Air Quality Commission on behalf of Coalition of Environmental Organizations.
43. Declaration (November 2010) on behalf of the Sierra Club in connection with the Martin Lake Station Units 1, 2, and 3. *Sierra Club v. Energy Future Holdings Corporation and Luminant Generation Company LLC*, Case No. 5:10-cv-00156-DF-CMC (Eastern District of Texas, Texarkana Division).
44. Pre-Filed Testimony (January 2011) and Declaration (February 2011) to the Georgia Office of State Administrative Hearings (OSAH) in the matter of Minor Source HAPs status for the proposed Longleaf Energy Associates power plant (OSAH-BNR-AQ-1115157-60-HOWELLS) on behalf of the Friends of the Chattahoochee and the Sierra Club).
45. Declaration (February 2011) in the matter of the Draft Title V Permit for RRI Energy MidAtlantic Power Holdings LLC Shawville Generating Station (Pennsylvania), ID No. 17-00001 on behalf of the Sierra Club.
46. Expert Report (March 2011), Rebuttal Expert Report (June 2011) on behalf of the United States in *United States of America v. Cemex, Inc.*, Civil Action No. 09-cv-00019-MSK-MEH (District of Colorado).
47. Declaration (April 2011) and Expert Report (July 16, 2012) in the matter of the Lower Colorado River Authority (LCRA)’s Fayette (Sam Seymour) Power Plant on behalf of the Texas Campaign for the Environment. *Texas Campaign for the Environment v. Lower Colorado River Authority*, Civil Action No. 4:11-cv-00791 (Southern District of Texas, Houston Division).

48. Declaration (June 2011) on behalf of the Plaintiffs MYTAPN in the matter of Microsoft-Yes, Toxic Air Pollution-No (MYTAPN) v. State of Washington, Department of Ecology and Microsoft Corporation Columbia Data Center to the Pollution Control Hearings Board, State of Washington, Matter No. PCHB No. 10-162.
49. Expert Report (June 2011) on behalf of the New Hampshire Sierra Club at the State of New Hampshire Public Utilities Commission, Docket No. 10-261 – the 2010 Least Cost Integrated Resource Plan (LCIRP) submitted by the Public Service Company of New Hampshire (re. Merrimack Station Units 1 and 2).
50. Declaration (August 2011) in the matter of the Sandy Creek Energy Associates L.P. Sandy Creek Power Plant on behalf of Sierra Club and Public Citizen. *Sierra Club, Inc. and Public Citizen, Inc. v. Sandy Creek Energy Associates, L.P.*, Civil Action No. A-08-CA-648-LY (Western District of Texas, Austin Division).
51. Expert Report (October 2011) on behalf of the Defendants in the matter of *John Quiles and Jeanette Quiles et al. v. Bradford-White Corporation, MTD Products, Inc., Kohler Co., et al.*, Case No. 3:10-cv-747 (TJM/DEP) (Northern District of New York).
52. Declaration (October 2011) on behalf of the Plaintiffs in the matter of *American Nurses Association et. al. (Plaintiffs), v. US EPA (Defendant)*, Case No. 1:08-cv-02198-RMC (US District Court for the District of Columbia).
53. Declaration (February 2012) and Second Declaration (February 2012) in the matter of *Washington Environmental Council and Sierra Club Washington State Chapter v. Washington State Department of Ecology and Western States Petroleum Association*, Case No. 11-417-MJP (Western District of Washington).
54. Expert Report (March 2012) and Supplemental Expert Report (November 2013) in the matter of *Environment Texas Citizen Lobby, Inc and Sierra Club v. ExxonMobil Corporation et al.*, Civil Action No. 4:10-cv-4969 (Southern District of Texas, Houston Division).
55. Declaration (March 2012) in the matter of *Center for Biological Diversity, et al. v. United States Environmental Protection Agency*, Case No. 11-1101 (consolidated with 11-1285, 11-1328 and 11-1336) (US Court of Appeals for the District of Columbia Circuit).
56. Declaration (March 2012) in the matter of *Sierra Club v. The Kansas Department of Health and Environment*, Case No. 11-105,493-AS (Holcomb power plant) (Supreme Court of the State of Kansas).
57. Declaration (March 2012) in the matter of the Las Brisas Energy Center *Environmental Defense Fund et al., v. Texas Commission on Environmental Quality*, Cause No. D-1-GN-11-001364 (District Court of Travis County, Texas, 261<sup>st</sup> Judicial District).
58. Expert Report (April 2012), Supplemental and Rebuttal Expert Report (July 2012), and Supplemental Rebuttal Expert Report (August 2012) on behalf of the states of New Jersey and Connecticut in the matter of the Portland Power plant *State of New Jersey and State of Connecticut (Intervenor-Plaintiff) v. RRI Energy Mid-Atlantic Power Holdings et al.*, Civil Action No. 07-CV-5298 (JKG) (Eastern District of Pennsylvania).
59. Declaration (April 2012) in the matter of the EPA's EGU MATS Rule, on behalf of the Environmental Integrity Project.
60. Expert Report (August 2012) on behalf of the United States in connection with the Louisiana Generating NSR Case. *United States v. Louisiana Generating, LLC*, 09-CV100-RET-CN (Middle District of Louisiana) – Harm Phase.
61. Declaration (September 2012) in the Matter of the Application of *Energy Answers Incinerator, Inc.* for a Certificate of Public Convenience and Necessity to Construct a 120 MW Generating Facility in Baltimore City, Maryland, before the Public Service Commission of Maryland, Case No. 9199.
62. Expert Report (October 2012) on behalf of the Appellants (Robert Concilus and Leah Humes) in the matter of Robert Concilus and Leah Humes v. Commonwealth of Pennsylvania Department of Environmental Protection and Crawford Renewable Energy, before the Commonwealth of Pennsylvania Environmental Hearing Board, Docket No. 2011-167-R.

Commonwealth of Pennsylvania Department of Environmental Protection (Appellee) and MarkWest Liberty Midstream and resource, LLC (Permittee)*, before the Commonwealth of Pennsylvania Environmental Hearing Board, EHB Docket No. 2020-002-R.
  143. Expert Reports (March 2021 and May 2021) regarding the Aries Newark LLC Sludge Processing Facility, Application No. CPB 20-74, Central Planning Board, City of Newark, New Jersey.
  144. Expert Report (April 2021) for *Charles Johnson Jr. (Plaintiff) v. BP Exploration and Production Inc., et. al. (Defendant)*, Civil Action No. 2:20-CV-01329. (US District Court for the Eastern District of Louisiana, New Orleans Division).
  145. Expert Report (April 2021) for *Floyd Ruffin (Plaintiff), v. BP Exploration and Production Inc., et. al. (Defendant)*, Civil Action No. 2:20-cv-00334-CJB-JCW (US District Court for the Eastern District of Louisiana, New Orleans Division).
  146. Expert Report (May 2021) for *Clifford Osmer (Plaintiff) v. BP Exploration and Production Inc., et. al., (Defendants)* related to No. 2:19-CV-10331 (US District Court for the Eastern District of Louisiana, New Orleans Division).
  147. Expert Report (June 2021) for *Antonia Saavedra-Vargas (Plaintiff) v. BP Exploration and Production Inc., et. al. (Defendant)*, Civil Action No. 2:18-CV-11461 (US District Court for the Eastern District of Louisiana, New Orleans Division).
  148. Affidavit (June 2021) for Lourdes Rubi in the matter of *Lourdes Rubi (Plaintiff) v. BP Exploration and Production Inc., et. al., (Defendants)*, related to 12-968 BELO in MDL No. 2179 (US District Court for the Eastern District of Louisiana, New Orleans Division).

149. Expert Report (May 2021) for *James Noel (Plaintiff) v. BP Exploration and Production Inc., et. al. (Defendant)*, Civil Action No. 1:19-CV-00694 (US District Court for the Southern District of Alabama, Mobile Division).
150. Expert Report (June 2021) for *Wallace Smith (Plaintiff) v. BP Exploration and Production Inc., et. al. (Defendant)*, Civil Action No. 2:19-CV-12880 (US District Court for the Eastern District of Louisiana, New Orleans Division).

C. Occasions where Dr. Sahu has provided oral testimony in depositions, at trial or in similar proceedings include the following:

151. Deposition on behalf of Rocky Mountain Steel Mills, Inc. located in Pueblo, Colorado – dealing with the manufacture of steel in mini-mills including methods of air pollution control and BACT in steel mini-mills and opacity issues at this steel mini-mill.
152. Trial Testimony (February 2002) on behalf of Rocky Mountain Steel Mills, Inc. in Denver District Court.
153. Trial Testimony (February 2003) on behalf of the United States in the Ohio Edison NSR Cases, *United States, et al. v. Ohio Edison Co., et al.*, C2-99-1181 (Southern District of Ohio).
154. Trial Testimony (June 2003) on behalf of the United States in the Illinois Power NSR Case, *United States v. Illinois Power Co., et al.*, 99-833-MJR (Southern District of Illinois).
155. Deposition (10/20/2005) on behalf of the United States in connection with the Cinergy NSR Case. *United States, et al. v. Cinergy Corp., et al.*, IP 99-1693-C-M/S (Southern District of Indiana).
156. Oral Testimony (August 2006) on behalf of the Appalachian Center for the Economy and the Environment re. the Western Greenbrier plant, WV before the West Virginia DEP.
157. Oral Testimony (May 2007) on behalf of various Montana petitioners (Citizens Awareness Network (CAN), Women's Voices for the Earth (WVE) and the Clark Fork Coalition (CFC)) re. the Thompson River Cogeneration plant before the Montana Board of Environmental Review.
158. Oral Testimony (October 2007) on behalf of the Sierra Club re. the Sevier Power Plant before the Utah Air Quality Board.
159. Oral Testimony (August 2008) on behalf of the Sierra Club and Clean Water re. Big Stone Unit II before the South Dakota Board of Minerals and the Environment.
160. Oral Testimony (February 2009) on behalf of the Sierra Club and the Southern Environmental Law Center re. Santee Cooper Pee Dee units before the South Carolina Board of Health and Environmental Control.
161. Oral Testimony (February 2009) on behalf of the Sierra Club and the Environmental Integrity Project re. NRG Limestone Unit 3 before the Texas State Office of Administrative Hearings (SOAH) Administrative Law Judges.
162. Deposition (July 2009) on behalf of MTD Products, Inc., in the matter of *Alice Holmes and Vernon Holmes v. Home Depot USA, Inc., et al.*
163. Deposition (October 2009) on behalf of Environmental Defense and others, in the matter of challenges to the proposed Coletto Creek coal fired power plant project at the Texas State Office of Administrative Hearings (SOAH).
164. Deposition (October 2009) on behalf of Environmental Defense, in the matter of permit challenges to the proposed Las Brisas coal fired power plant project at the Texas State Office of Administrative Hearings (SOAH).
165. Deposition (October 2009) on behalf of the Sierra Club, in the matter of challenges to the proposed Medicine Bow Fuel and Power IGL plant in Cheyenne, Wyoming.
166. Deposition (October 2009) on behalf of Environmental Defense and others, in the matter of challenges to the proposed Tenaska coal fired power plant project at the Texas State Office of Administrative Hearings (SOAH). (April 2010).
167. Oral Testimony (November 2009) on behalf of the Environmental Defense Fund re. the Las Brisas Energy Center before the Texas State Office of Administrative Hearings (SOAH) Administrative Law Judges.

168. Deposition (December 2009) on behalf of Environmental Defense and others, in the matter of challenges to the proposed White Stallion Energy Center coal fired power plant project at the Texas State Office of Administrative Hearings (SOAH).
169. Oral Testimony (February 2010) on behalf of the Environmental Defense Fund re. the White Stallion Energy Center before the Texas State Office of Administrative Hearings (SOAH) Administrative Law Judges.
170. Deposition (June 2010) on behalf of the United States in connection with the Alabama Power Company NSR Case. *United States v. Alabama Power Company*, CV-01-HS-152-S (Northern District of Alabama, Southern Division).
171. Trial Testimony (September 2010) on behalf of Commonwealth of Pennsylvania – Dept. of Environmental Protection, State of Connecticut, State of New York, State of Maryland, and State of New Jersey (Plaintiffs) in connection with the Allegheny Energy NSR Case in US District Court in the Western District of Pennsylvania. *Plaintiffs v. Allegheny Energy Inc., et al.*, 2:05cv0885 (Western District of Pennsylvania).
172. Oral Direct and Rebuttal Testimony (September 2010) on behalf of Fall-Line Alliance for a Clean Environment and others in the matter of the PSD Air Permit for Plant Washington issued by Georgia DNR at the Office of State Administrative Hearing, State of Georgia (OSAH-BNR-AQ-1031707-98-WALKER).
173. Oral Testimony (September 2010) on behalf of the State of New Mexico Environment Department in the matter of Proposed Regulation 20.2.350 NMAC – *Greenhouse Gas Cap and Trade Provisions*, No. EIB 10-04 (R), to the State of New Mexico, Environmental Improvement Board.
174. Oral Testimony (October 2010) on behalf of the Environmental Defense Fund re. the Las Brisas Energy Center before the Texas State Office of Administrative Hearings (SOAH) Administrative Law Judges.
175. Oral Testimony (November 2010) regarding BART for PSCo Hayden, CSU Martin Drake units before the Colorado Air Quality Commission on behalf of the Coalition of Environmental Organizations.
176. Oral Testimony (December 2010) regarding BART for TriState Craig Units, CSU Nixon Unit, and PRPA Rawhide Unit) before the Colorado Air Quality Commission on behalf of the Coalition of Environmental Organizations.
177. Deposition (December 2010) on behalf of the United States in connection with the Louisiana Generating NSR Case. *United States v. Louisiana Generating, LLC*, 09-CV100-RET-CN (Middle District of Louisiana).
178. Deposition (February 2011 and January 2012) on behalf of Wild Earth Guardians in the matter of opacity exceedances and monitor downtime at the Public Service Company of Colorado (Xcel)'s Cherokee power plant. No. 09-cv-1862 (D. Colo.).
179. Oral Testimony (February 2011) to the Georgia Office of State Administrative Hearings (OSAH) in the matter of Minor Source HAPs status for the proposed Longleaf Energy Associates power plant (OSAH-BNR-AQ-1115157-60-HOWELLS) on behalf of the Friends of the Chattahoochee and the Sierra Club).
180. Deposition (August 2011) on behalf of the United States in *United States of America v. Cemex, Inc.*, Civil Action No. 09-cv-00019-MSK-MEH (District of Colorado).
181. Deposition (July 2011) and Oral Testimony at Hearing (February 2012) on behalf of the Plaintiffs MYTAPN in the matter of Microsoft-Yes, Toxic Air Pollution-No (MYTAPN) v. State of Washington, Department of Ecology and Microsoft Corporation Columbia Data Center to the Pollution Control Hearings Board, State of Washington, Matter No. PCHB No. 10-162.
182. Oral Testimony at Hearing (March 2012) on behalf of the United States in connection with the Louisiana Generating NSR Case. *United States v. Louisiana Generating, LLC*, 09-CV100-RET-CN (Middle District of Louisiana).
183. Oral Testimony at Hearing (April 2012) on behalf of the New Hampshire Sierra Club at the State of New Hampshire Public Utilities Commission, Docket No. 10-261 – the 2010 Least Cost Integrated Resource Plan (LCIRP) submitted by the Public Service Company of New Hampshire (re. Merrimack Station Units 1 and 2).
184. Oral Testimony at Hearing (November 2012) on behalf of Clean Wisconsin in the matter of Application of Wisconsin Public Service Corporation for Authority to Construct and Place in Operation a New Multi-Pollutant

- Control Technology System (ReACT) for Unit 3 of the Weston Generating Station, before the Public Service Commission of Wisconsin, Docket No. 6690-CE-197.
185. Deposition (March 2013) in the matter of various Environmental Petitioners v. North Carolina DENR/DAQ and Carolinas Cement Company, before the Office of Administrative Hearings, State of North Carolina.
  186. Deposition (August 2013) on behalf of the Sierra Club in connection with the Luminant Big Brown Case. *Sierra Club v. Energy Future Holdings Corporation and Luminant Generation Company LLC*, Civil Action No. 6:12-cv-00108-WSS (Western District of Texas, Waco Division).
  187. Deposition (August 2013) on behalf of the Sierra Club in connection with the Luminant Martin Lake Case. *Sierra Club v. Energy Future Holdings Corporation and Luminant Generation Company LLC*, Civil Action No. 5:10-cv-0156-MHS-CMC (Eastern District of Texas, Texarkana Division).
  188. Deposition (February 2014) on behalf of the United States in *United States of America v. Ameren Missouri*, Civil Action No. 4:11-cv-00077-RWS (Eastern District of Missouri, Eastern Division).
  189. Trial Testimony (February 2014) in the matter of *Environment Texas Citizen Lobby, Inc and Sierra Club v. ExxonMobil Corporation et al.*, Civil Action No. 4:10-cv-4969 (Southern District of Texas, Houston Division).
  190. Trial Testimony (February 2014) on behalf of the Sierra Club in connection with the Luminant Big Brown Case. *Sierra Club v. Energy Future Holdings Corporation and Luminant Generation Company LLC*, Civil Action No. 6:12-cv-00108-WSS (Western District of Texas, Waco Division).
  191. Deposition (June 2014) and Trial (August 2014) on behalf of ECM Biofilms in the matter of the *US Federal Trade Commission (FTC) v. ECM Biofilms* (FTC Docket #9358).
  192. Deposition (February 2015) on behalf of Plaintiffs in the matter of *Sierra Club and Montana Environmental Information Center (Plaintiffs) v. PPL Montana LLC, Avista Corporation, Puget Sound Energy, Portland General Electric Company, Northwestern Corporation, and PacifiCorp (Defendants)*, Civil Action No. CV 13-32-BLG-DLC-JCL (US District Court for the District of Montana, Billings Division).
  193. Oral Testimony at Hearing (April 2015) on behalf of Niagara County, the Town of Lewiston, and the Villages of Lewiston and Youngstown in the matter of CWM Chemical Services, LLC New York State Department of Environmental Conservation (NYSDEC) Permit Application Nos.: 9-2934-00022/00225, 9-2934-00022/00231, 9-2934-00022/00232, and 9-2934-00022/00249 (pending).
  194. Deposition (August 2015) on behalf of Plaintiff in the matter of *Conservation Law Foundation (Plaintiff) v. Broadrock Gas Services LLC, Rhode Island LFG GENCO LLC, and Rhode Island Resource Recovery Corporation (Defendants)*, Civil Action No. 1:13-cv-00777-M-PAS (US District Court for the District of Rhode Island).
  195. Testimony at Hearing (August 2015) on behalf of the Sierra Club in the matter of *Amendments to 35 Illinois Administrative Code Parts 214, 217, and 225* before the Illinois Pollution Control Board, R15-21.
  196. Deposition (May 2015) on behalf of Plaintiffs in the matter of *Northwest Environmental Defense Center et. al., (Plaintiffs) v. Cascade Kelly Holdings LLC, d/b/a Columbia Pacific Bio-Refinery, and Global Partners LP (Defendants)*, Civil Action No. 3:14-cv-01059-SI (US District Court for the District of Oregon, Portland Division).
  197. Trial Testimony (October 2015) on behalf of Plaintiffs in the matter of *Northwest Environmental Defense Center et. al., (Plaintiffs) v. Cascade Kelly Holdings LLC, d/b/a Columbia Pacific Bio-Refinery, and Global Partners LP (Defendants)*, Civil Action No. 3:14-cv-01059-SI (US District Court for the District of Oregon, Portland Division).
  198. Deposition (April 2016) on behalf of the Plaintiffs in *UNatural Resources Defense Council, Respiratory Health Association, and Sierra Club (Plaintiffs) v. Illinois Power Resources LLC and Illinois Power Resources Generation LLC (Defendants)*, Civil Action No. 1:13-cv-01181 (Central District of Illinois, Peoria Division).
  199. Trial Testimony at Hearing (July 2016) in the matter of Tesoro Savage LLC Vancouver Energy Distribution Terminal, Case No. 15-001 before the State of Washington Energy Facility Site Evaluation Council.
  200. Trial Testimony (December 2016) on behalf of the challengers in the matter of the Delaware Riverkeeper Network, Clean Air Council, et. al., vs. Commonwealth of Pennsylvania Department of Environmental Protection

and R. E. Gas Development LLC regarding the Geyer well site before the Pennsylvania Environmental Hearing Board.

201. Trial Testimony (July-August 2016) on behalf of the United States in *United States of America v. Ameren Missouri*, Civil Action No. 4:11-cv-00077-RWS (Eastern District of Missouri, Eastern Division).
202. Trial Testimony (January 2017) on the Environmental Impacts Analysis associated with the Huntley and Huntley Poseidon Well Pad Hearing on behalf citizens in the matter of the special exception use Zoning Hearing Board of Penn Township, Westmoreland County, Pennsylvania.
203. Trial Testimony (January 2017) on the Environmental Impacts Analysis associated with the Apex energy Backus Well Pad Hearing on behalf citizens in the matter of the special exception use Zoning Hearing Board of Penn Township, Westmoreland County, Pennsylvania.
204. Trial Testimony (January 2017) on the Environmental Impacts Analysis associated with the Apex energy Drakulic Well Pad Hearing on behalf citizens in the matter of the special exception use Zoning Hearing Board of Penn Township, Westmoreland County, Pennsylvania.
205. Trial Testimony (January 2017) on the Environmental Impacts Analysis associated with the Apex energy Deutsch Well Pad Hearing on behalf citizens in the matter of the special exception use Zoning Hearing Board of Penn Township, Westmoreland County, Pennsylvania.
206. Deposition Testimony (July 2017) on behalf of Plaintiffs in the matter of *Casey Voight and Julie Voight v Coyote Creek Mining Company LLC (Defendant)* Civil Action No. 1:15-CV-00109 (US District Court for the District of North Dakota, Western Division).
207. Deposition Testimony (November 2017) on behalf of Defendant in the matter of *Oakland Bulk and Oversized Terminal (Plaintiff) v City of Oakland (Defendant.)* Civil Action No. 3:16-cv-07014-VC (US District Court for the Northern District of California, San Francisco Division).
208. Deposition Testimony (December 2017) on behalf of Plaintiff in the matter of *Wildearth Guardians (Plaintiff) v Colorado Springs Utility Board (Defendant)* Civil Action No. 1:15-cv-00357-CMA-CBS (US District Court for the District of Colorado).
209. Deposition Testimony (January 2018) in the matter of National Parks Conservation Association (NPCA) v. State of Washington Department of Ecology and British Petroleum (BP) before the Washington Pollution Control Hearing Board, Case No. 17-055.
210. Trial Testimony (January 2018) on behalf of Defendant in the matter of *Oakland Bulk and Oversized Terminal (Plaintiff) v City of Oakland (Defendant.)* Civil Action No. 3:16-cv-07014-VC (US District Court for the Northern District of California, San Francisco Division).
211. Trial Testimony (April 2018) on behalf of the National Parks Conservation Association (NPCA) in the matter of NPCA v State of Washington, Department of Ecology and BP West Coast Products, LLC, PCHB No. 17-055 (Pollution Control Hearings Board for the State of Washington).
212. Deposition (June 2018) (harm Phase) on behalf of Plaintiffs in the matter of *Natural Resources Defense Council, Inc., Sierra Club, Inc., and Respiratory Health Association v. Illinois Power Resources LLC, and Illinois Power Resources Generating LLC (Defendants)*, Civil Action No. 1:13-cv-01181 (US District Court for the Central District of Illinois, Peoria Division).
213. Trial Testimony (July 2018) on behalf of Petitioners in the matter of *Coosa River Basin Initiative and Sierra Club (Petitioners) v State of Georgia Environmental Protection Division, Georgia Department of Natural Resources (Respondent) and Georgia Power Company (Intervenor/Respondent)*, Docket Nos: 1825406-BNR-WW-57-Howells and 1826761-BNR-WW-57-Howells, Office of State Administrative Hearings, State of Georgia.
214. Deposition (January 2019) and Trial Testimony (January 2019) on behalf of Sierra Club and Texas Campaign for the Environment (Appellants) in the contested case hearing before the Texas State Office of Administrative Hearings in Docket Nos. 582-18-4846, 582-18-4847 (Application of GCGV Asset Holding, LLC for Air Quality Permit Nos. 146425/PSDTX1518 and 146459/PSDTX1520 in San Patricio County, Texas).

215. Deposition (February 2019) and Trial Testimony (March 2019) on behalf of Sierra Club in the State of Florida, Division of Administrative Hearings, Case No. 18-2124EPP, Tampa Electric Company Big Bend Unit 1 Modernization Project Power Plant Siting Application No. PA79-12-A2.
216. Deposition (June 2019) relating to the appeal of air permits issued to PTTGCA on behalf of Appellants in the matter of *Sierra Club (Appellants) v. Craig Butler, Director, et. al., Ohio EPA (Appellees)* before the State of Ohio Environmental Review Appeals Commission (ERAC), Case Nos. ERAC-19-6988 through -6991.
217. Deposition (September 2019) on behalf of Appellants relating to the NPDES permit for the Cheswick power plant in the matter of *Three Rivers Waterkeeper and Sierra Club (Appellants) v. State of Pennsylvania Department of Environmental Protection (Appellee) and NRG Power Midwest (Permittee)*, before the Commonwealth of Pennsylvania Environmental Hearing Board, EHB Docket No. 2018-088-R.
218. Deposition (December 2019) on behalf of the Plaintiffs in the matter of David Kovac, individually and on behalf of wrongful death class of Irene Kovac v. BP Corporation North America Inc., Circuit Court of Jackson County, Missouri (Independence), Case No. 1816-CV12417.
219. Deposition (February 2020, virtual) and testimony at Hearing (August 2020, virtual) on behalf of Earthjustice in the matter of *Objection to the Issuance of PSD/NSR and Title V permits for Riverview Energy Corporation*, Dale, Indiana, before the Indiana Office of Environmental Adjudication, Cause No. 19-A-J-5073.
220. Hearing (July 14-15, 2020, virtual) on behalf of the Sierra Club in the matter of *the Application of the Ohio State University for a certificate of Environmental Compatibility and Public Need to Construct a Combined Heat and Power Facility in Franklin County, Ohio*, before the Ohio Power Siting Board, Case No. 19-1641-EL-BGN.
221. Hearing (September 2020, virtual) on behalf of WildEarth Guardians (petitioners) in the matter of *the Appeals of the Air Quality Permit No. 7482-M1 Issued to 3 Bear Delaware Operating – NM LLC (EIB No. 20-21(A) and Registrations Nos. 8729, 8730, and 8733 under General Construction Permit for Oil and Gas Facilities (EIB No. 20-33 (A))*, before the State of New Mexico, Environmental Improvement Board.
222. Deposition (December 2020, March 4-5, 2021, all virtual) and Hearing (April 2021, virtual) in support of Petitioner's Motion for Stay of PSCAA NOC Order of Approval No. 11386 in the matter of the *Puyallup Tribe of Indians v. Puget Sound Clean Air Agency (PSCAA) and Puget Sound Energy (PSE)*, before the State of Washington Pollution Control Hearings Board, PCHB No. P19-088.
223. Hearing (September 2020, virtual) on the *Initial Economic Impact Analysis (EIA) for A Proposal To Regulate NOx Emissions from Natural Gas Fired Rich-Burn Natural Gas Reciprocating Internal Combustion Engines (RICE) Greater Than 100 Horsepower* prepared on behalf of Earthjustice and the National Parks Conservation Association in the matter of Regulation Number 7, Alternate Rules before the Colorado Air Quality Control Commission.
224. Deposition (December 2020, virtual and Hearing February 2021, virtual) on behalf of the Plaintiffs (Shrimpers and Fishermen of the Rio Grande Valley represented by Texas RioGrande Legal Aid, Inc.) in the matter of the Appeal of Texas Commission on Environmental Quality (TCEQ) Permit Nos. 147681, PSDTX1522, GHGPSDTX172 for the Jupiter Brownsville Heavy Condensate Upgrader Facility, Cameron County, before the Texas State Office of Administrative Hearings, SOAH Docket No. 582-21-0111, TCEQ Docket No. 2020-1080-AIR.
225. Deposition (January 2021, virtual) on behalf of Plaintiffs in the matter of *PennEnvironment Inc., and Clean Air Council (Plaintiffs) and Allegheny County Health Department (Plaintiff-Intervenor) v. United States Steel Corporation (Defendant)*, Civil Action No. 2-19-cv-00484-MJH (US District Court for the Western District of Pennsylvania.)
226. Deposition (February 2021, virtual) on behalf of Plaintiffs in the matter of *Sierra Club Inc. (Plaintiff) v. GenOn Power Midwest LP (Defendants)*, Civil Action No. 2-19-cv-01284-WSS (US District Court for the Western District of Pennsylvania.)
227. Deposition (April 2021, virtual) on the Potential Remedies to Avoid Adverse Thermal Impacts from the Merrimack Station on behalf of Plaintiffs in the matter of *Sierra Club Inc. and the Conservation Law Foundation (Plaintiffs) v. Granite Shore Power, LLC et. al., (Defendants)*, Civil Action No. 19-cv-216-JL (US District Court for the District of New Hampshire.)

228. Deposition (June 2021, virtual) on behalf of Plaintiffs in the matter of *Sierra Club (Plaintiff) v. Woodville Pellets, LLC (Defendant)*, Civil Action No. 9:20-cv-00178-MJT (US District Court for the Eastern District of Texas, Lufkin Division).
229. Deposition (June 2021, virtual) on behalf of the Plaintiffs in the matter of *Modern Holdings, LLC, et al. (Plaintiffs) v. Corning Inc., et al. (Defendants)*, Civil Action No. 5:13-cv-00405-GFVT, (US District Court for the Eastern District of Kentucky, Central Division at Lexington).
230. Testimony (June 2021, virtual) regarding the Aries Newark LLC Sludge Processing Facility, Application No. CPB 20-74, Central Planning Board, City of Newark, New Jersey.

**Re: Comments and Public Meeting Request Concerning Draft Air Quality Permit No. 162941, Authorizing an Expansion of the Seahawk Terminal, Located in Calhoun County, Texas**

Dear Ms. Gharis:

If finalized, Draft Air Quality Permit No. 162941 ("Draft Permit") will authorize Max Midstream Texas LLC ("Max Midstream") to construct a significant expansion of its existing Seahawk Terminal ("Terminal"), located in Point Comfort, Texas. On November 12, 2020, S. Diane Wilson, San Antonio Bay Estuarine Waterkeeper ("Waterkeeper"), Texas Rio Grande Legal Aid, and Environmental Integrity Project ("Commenters") filed comments and requested a contested case hearing on Max Midstream's application for authorization to construct the Terminal expansion project. Comments and Contested Case Hearing Request Concerning Max Midstream Texas LLC's Application for Permit No. 162941 (November 12, 2020) ("Initial Comments"). Today, Commenters appreciate the opportunity to file supplementary comments on the Draft Permit and to request a public meeting on Max Midstream's application and Draft Permit. These supplementary comments add to, rather than replace, issues of fact and law identified in the Initial Comments.

## **I. Introduction**

As the many requests for a contested case hearing and a public meeting concerning this project indicate, Max Midstream's proposed Terminal expansion project is a matter of great concern to those who live, work, and recreate near the Terminal. This concern is warranted, not only in light of the significant deficiencies in Max Midstream's air permit application, but also because the project threatens to substantially transform the profile of the Point Comfort area in a way that will diminish the ecological integrity of the area, interfere with residents' use and enjoyment of their private property, and increase residents' exposure to various dangerous contaminants that will be emitted into the air and discharged into Matagorda Bay. For example, the Matagorda Ship Channel will be deepened and widened to accommodate ship traffic to the Seahawk Terminal. This endeavor and subsequent activities at the Terminal threaten to smother up to 700 acres of oyster reefs, increase the salinity of the bay, and unearth methyl mercury pollution from the adjacent Alcoa Superfund site, potentially devastating local fisheries and

harming the already overburdened communities in Calhoun County, Texas. All of this is in addition to the harmful air quality impacts from construction and operation of the expanded Seahawk Terminal.

Additionally, many people are concerned that Max Midstream has been less than forthcoming and transparent about its intentions and about the likely impacts of the Terminal expansion project. For example, Max Midstream's decision to improperly mark all the detailed emission calculations submitted with its initial application "confidential," significantly limited the public's ability to identify critical deficiencies in the application and may have discouraged many from requesting a contested case hearing during the initial comment period on Max Midstream's application.<sup>1</sup> Had Commenters not made their hearing request as best they could, given the limited available public information, and challenged Max Midstream's claim of confidentiality in comments filed with the Texas Attorney General, the public would have lost its opportunity to demand a contested case hearing and crucial information necessary for a full review of the application as well as for enforcement of the Draft Permit's terms—if issued—would still be inaccessible to the public.

Given these serious and well-founded concerns, the TCEQ must take its review of Max Midstream's air permit application seriously and ensure that any authorization issued to Max Midstream includes all applicable federal and state-law requirements, as well as monitoring, testing, and recordkeeping conditions sufficient to make those requirements enforceable. As Commenters explained in their Initial Comments and explain further below, the Draft Permit falls far short of this mark.

## **II. Request for a Public Meeting**

The proposed expansion project at the Seahawk Terminal is a matter of significant public concern. It will require a massive reshaping of Lavaca Bay that threatens to release mercury contamination from the nearby Alcoa Superfund site. *See, e.g.,* Matagorda Bay Foundation, Supplemental Environmental Impact Statement Letter, dated April 15, 2021.<sup>2</sup> It will lead to increased ship traffic in the Bay and increased road traffic through Point Comfort and potential congestion near the Terminal. Air emissions from the expanded Terminal, along with pollution

---

<sup>1</sup> Max Midstream's designation of these materials as "confidential" directly conflicts with applicable federal requirements that make enforceable application representations and emission calculations public as a matter of law. 40 C.F.R. § 2.31(f) (providing that "[e]missions data [and] standards or limitations ... shall be available to the public notwithstanding any other provision of this part."). When Commenters requested information Max Midstream improperly designated "confidential," and explained that emission calculations and enforceable application representations may not be withheld, Max Midstream did not revise its claim of confidentiality to allow prompt review of its materials. Instead, the company allowed Commenters' request to be forwarded to the Texas Attorney General without comment. Presumably, Max Midstream opted not comment on this referral because the company understood that its claim of confidentiality was unsupportable. Consequently, Commenters were able to obtain the requested information, but only after the public comment period on the application had closed.

<sup>2</sup> Available electronically at: <https://www.sabaypartnership.org/manager/wp-content/uploads/2021-04-28-Matagorda-Bay-Corps-Supplemental-EIS-Letter.pdf>

from the ships and trucks using the Terminal, as well as emissions from recently constructed or expanded sources threaten to significantly diminish air quality in the area. While Max Midstream claims that its expansion project is “minor,” it has failed to show that it will be able to comply with synthetic limits claimed to avoid more stringent pollution control and impacts evaluation requirements that apply to “major” projects and the Draft Permit fails to establish monitoring requirements that are capable of reliably detecting non-compliance with the synthetic minor limits. Members of the public should have an opportunity to voice their concerns about this project and to put questions to Max Midstream and TCEQ representatives directly. For these reasons, Commenters request that the Executive Director or the Office of the Chief Clerk hold a public meeting on Max Midstream’s application and Draft Permit, as allowed by 30 Tex. Admin. Code § 55.154(c).

### **III. Evidence Regarding Affected Persons**

#### **A. Newly-Identified affected persons (Waterkeeper)**

Siblings John Maresh and Janet Maresh are members of Waterkeeper who reside in Point Comfort, approximately 1.79 miles north of the Seahawk Terminal. Both were born in Calhoun County and grew up in Point Comfort. Each has an ownership interest in their family home in Point Comfort, which is their primary residence. Both are concerned that the proposed Seahawk Terminal expansion project will contribute to existing air pollution problems and that cumulative impacts from the Terminal and other new and expanding sources of air pollution, like Formosa’s plastics plant and frequent traffic congestion, will push the area into non-attainment for National Ambient Air Quality Standards (“NAAQS”).

When conditions are right, thick acrid smog settles over Point Comfort. The Maresh family is concerned that this problem will only become worse if TCEQ authorizes the Seahawk Terminal expansion project. They are also concerned that this massive industrial undertaking will reshape and degrade the local landscape, destroy native wildlife habitat, and threaten sensitive ecosystems. For these reasons, and because increased air pollution and industrial activity related to the Seahawk Terminal will diminish the Maresh’s use and enjoyment of their property, interfere with their recreational activities in the area, and may cause them deleterious health impacts, the Mareshes oppose issuance of the Draft Permit. Mr. Maresh and Ms. Maresh are affected persons, as defined by Texas law.

#### **B. Additional evidence demonstrating that S. Diane Wilson is an affected person**

Commenters identified S. Diane Wilson as an affected person in their Initial Comments and now provide additional evidence that she is an affected person entitled to participate in a contested case hearing challenging the sufficiency of Max Midstream’s application and the Draft Permit.

As part of her work with Waterkeeper, Ms. Wilson routinely visits the water bodies near the Seahawk Terminal in Cameron County to observe whether plastic pellets, powder, or flakes

are or have been discharged from the Formosa Plastics facility in Point Comfort (“Formosa”). Ms. Wilson visits the area at least once a week and as frequently as three times a week. During each of these trips, Ms. Wilson is outdoors in a kayak, a motorboat, or on foot between four and six hours. Ms. Wilson began visiting many of these sites as early as 2016 and will continue to visit them to monitor Formosa’s compliance with the Consent Decree entered in *San Antonio Bay Estuarine Waterkeeper, et. al., v. Formosa Plastics, Texas et. al.*, No. 6:17-cv-00047 (S. D. Texas, Dec. 9, 2019). This consent decree provides remedies to injuries suffered by Ms. Wilson and Waterkeeper from Formosa’s illegal discharge of plastics as found by Judge Kenneth Hoyt of the Southern District of Texas. These remedies establish a legally protected interest for Waterkeeper and Ms. Wilson that is not shared by the general public. Ms. Wilson’s reasonable concerns that her exposure to air pollution resulting from Max Midstream’s proposed expansion of the Seahawk Terminal interfere with these interests further establish that she is an affected person with a right to participate in a contested case hearing concerning Max Midstream’s air permit application and Draft Permit. Moreover, the District Court ruled in favor of Ms. Wilson and Waterkeeper on the question of Formosa’s liability in this lawsuit affirming that Ms. Wilson’s frequent use of the waters close or adjacent to the Formosa facility were sufficiently particularized to establish her standing to sue Formosa for violations of its wastewater discharge permit. Memorandum and Order, *San Antonio Bay Estuarine Waterkeeper, et al, v. Formosa Plastics Corp.*, Civil Action No. 6:17-CV-0047 (U.S. District Court, Southern District of Texas, Victoria Division June 27, 2019). The Court’s holding regarding standing remains in effect and supports Commenters’ demonstration that Ms. Wilson is an affected person in this case, because Max Midstream’s proposed expansion project will interfere with her use and enjoyment of these same areas.

Ms. Wilson regularly visits locations in Lavaca and Cox Bay to evaluate the presence and source of plastics in those water bodies. Three times in the last four months, Ms. Wilson visited the site of Formosa’s outfall number 013 located about 3,100 feet of the Seahawk terminal. Attachment A, Image A. Twice in the last year, Ms. Wilson visited Formosa’s outfall number 011 located near the Calhoun Port Authority and roughly 1,300 feet from the Seahawk terminal. *Id.* at Image B. Several times in the last year, Ms. Wilson visited the Northern portion of the harbor near the Alcoa facility, approximately 1.85 miles from the Seahawk terminal. *Id.* at Image C. Ms. Wilson also visits Formosa’s outfall 001 in Lavaca Bay once every two months, and the old causeway near Point Comfort once a week. Each are approximately two miles from the Seahawk Terminal. *Id.* at Images D & E.

Ms. Wilson visits Formosa’s outfalls 006, 002, 004, 005 and the Tres Bahias property on the East side of Cox Creek once a week. These are three miles or less from the Seahawk Terminal. *Id.* at Images F, G, & H. Multiple times a year, Ms. Wilson also visits other portions of Cox Creek including Formosa’s outfall 003 and the Alcoa Dam, Formosa’s fence line along highway 35, and a boom intended to catch plastics discharged from outfalls 002, 004, and 005. Each of these are 2.5 miles or less from the Seahawk terminal. *Id.* at Images I, J, & K. Ms. Wilson also visits locations on the southwest peninsula of Lavaca Bay once a week. These locations are all five miles or less of the Seahawk terminal. *Id.* at Images L, M, & N.

#### IV. Additional Disputed Issues of Fact and Law

Commenters preserve the following issues of material fact and law for consideration at a contested case hearing concerning Max Midstream's application and Draft Permit. Additional details about some, but not all, of these contested issues is provided below in Section V of these supplemental comments.

- The Terminal is a major source of CO, NO<sub>x</sub>, and VOC (ozone), because the Terminal has the physical capacity to emit these pollutants at rates that exceed the Prevention of Significant Deterioration ("PSD") significance threshold of 100 tons per year ("TPY") and the synthetic minor limits Max Midstream has taken to avoid PSD preconstruction permitting requirements are not practicably enforceable. 30 Tex. Admin. Code § 116.111(a)(2)(B), (G), (I);
- Max Midstream has not attempted to demonstrate compliance with applicable PSD preconstruction requirements triggered by the expansion project. *Id.* at §§ 116.111(a)(2)(I), 116.160(b), (c);
- Max Midstream's application relies on inappropriate emission factors, including AP-42 emission factors and vendor guarantees that may or may not exist, which underrepresent potential and future actual emissions of VOC, NO<sub>x</sub>, CO, PM/PM<sub>10</sub>/PM<sub>2.5</sub>, SO<sub>2</sub>, and HAPs from the Terminal. *Id.* at §§ 116.111(a)(2)(A), (G), (I), 116.160(b), (c);
- Max Midstream failed to provide a reasonable basis for its representations regarding potential Hazardous Air Pollutant ("HAP") emissions from the Terminal used to avoid major source HAP requirements and to model air quality impacts. *Id.* at § 116.111(a)(2)(G), (K);
- Max Midstream's representation that its emergency flare will not emit *any* particulate matter is unsupported and unreasonable and the Draft Permit fails to establish monitoring and testing provisions that make the prohibition on all PM emissions from the emergency flare practicably enforceable. *Id.* at §§ 116.111(a)(2)(A), (B), (G), (J);
- Max Midstream underrepresented expected emissions from truck and marine loading and overestimated the collection efficiencies of its equipment related to these activities, and the Draft Permit fails to establish monitoring and testing conditions sufficient to make these representations practicably enforceable. *Id.* at § 116.111(a)(2)(A), (B), (G), (I), (J), (K);
- Max Midstream failed to provide the basis for the crude characteristics it used to calculate proposed emission limits and to perform its air impacts demonstrations, and the Draft Permit fails to require monitoring sufficient to make representations regarding crude characteristics practicably enforceable. *Id.* at § 116.111(a)(2)(A), (B), (G), (I), (J), (K);

- Max Midstream's application fails to demonstrate that the Draft Permit's emission limits and pollution control requirements are consistent with applicable Texas Best Available Control ("BACT") requirements, because it fails to include *any* information about pollution control requirements in recently issued permits for similar sources. *Id.* at §§ 116.111(a)(2)(B), (C), (G), (I), 116.160(c), (a);
- Max Midstream's proposed leak detection and repair ("LDAR") program is not consistent with applicable Texas BACT requirements, because Max Midstream failed to consider more robust LDAR regimes required by recently-issued Texas air permits and because Max Midstream failed to consider whether additional monitoring using optical gas imaging ("OGI") would provide more effective control without unreasonably increasing costs. *Id.* at §§ 116.111(a)(2)(B), (C), (G), (I), 116.160(c), (a);
- Max Midstream failed to demonstrate that a NO<sub>x</sub> emission rate of 0.1 lb/MMBtu is consistent with applicable Texas BACT requirements for units CONT-1 and CONT-2. *Id.* at §§ 116.111(a)(2)(B), (C), (G), (I), 116.160(c), (a);
- Max Midstream has not attempted to demonstrate that emissions from the Terminal will not cause or contribute to violation of National Ambient Air Quality Standards ("NAAQS") for ozone. *Id.* at §§ 116.111(a)(2)(A), (I), (J), 116.160(c)(2);
- Max Midstream's air quality impacts demonstration is deficient, because it (1) relies upon unrealistic and practicably unenforceable assumptions about emission rates for new and existing equipment; (2) fails to model impacts from the Terminal using the 10 ppmv at 3% O<sub>2</sub> VOC emission rate included in the Draft Permit; (3) uses unrepresentative meteorological data; (3) improperly and arbitrarily excludes or averages emissions from certain emission points; (4) uses unrepresentative information about source parameters and location; (5) fails to properly identify point sources and area sources for purposes of modeling, and (6) fails to account for cumulative impacts from other new and recently permitted sources. *Id.* at §§ 116.111(a)(2)(A), (I), (J), 116.160(c)(2).

## V. Detailed Comments on Select Disputed Issues of Fact and Law

### A. Max Midstream's representations about the Terminal's potential to emit are unsupported and unreasonable.

According to Max Midstream's updated application, the expanded Seahawk Terminal will emit pollutants at the following rates:

**Table 1: Represented Potential to Emit**

Pollutant	Tons Per Year	Major Modification Threshold (TPY)
CO	97.35	100
NO <sub>x</sub>	97.03	100
PM/PM <sub>10</sub> /PM <sub>2.5</sub>	11.12	100
SO <sub>2</sub>	21.93	100
Ozone (as VOC)	84.15	100
Ozone (as NO <sub>x</sub> )	97.03	100

Max Midstream, PI-1 General Application Table dated November 2020.

As Commenters demonstrated in their Initial Comments, the expanded Terminal will have the physical capacity to emit pollution far above the significance threshold of 100 tons per year that triggers PSD preconstruction permitting requirements. Initial Comments at 2-3. Thus, the expansion project triggers PSD preconstruction permitting requirements, *see* 30 Tex. Admin. Code § 116.160(c) (describing additional requirements that apply to PSD major modifications), unless the permit authorizing the project establishes practicably enforceable “synthetic” limitations for criteria pollutants, like NO<sub>x</sub>, PM, and VOC (an ozone precursor), ensuring that emissions of these pollutants will remain below the 100 ton per year PSD significance threshold. *See In the Matter of Yuhuang Chemical Inc. Methanol Plant*, Order on Petition No. VI-2015-03 (August 31, 2016) at 14 (“Importantly, only limits that meet certain enforceability criteria may be used to restrict a facility’s PTE, and the permit must include sufficient terms and conditions such that the source cannot lawfully exceed the limit.”) (citing *In the Matter of Cash Creek Generation*, Order on Petition No. IV-2010-4 (June 22, 2012) (explaining that an “emission limit can be relied upon to restrict a source’s PTE only if it is legally and practicably enforceable.”)); *see also* EPA, *New Source Review Workshop Manual*, at A.5 (Draft October 1990) (“For any limit or condition to be a legitimate restriction on potential to emit, that limit or condition must be federally-enforceable, which in turn requires practical enforceability.”).

In this case, Max Midstream has identified constraints on throughput, loading rates, operating time, and material composition that are intended to establish enforceable constraints on the Terminal’s potential to emit. However, these constraints alone are not sufficient to show that actual emissions from the Terminal will remain below the applicable PSD significance threshold.

Max Midstream also relies on “emission factors,” which are predictions about how much pollution units and activities at the Terminal will emit per the unit of activity that the Draft Permit will limit, to calculate its potential to emit given the artificial constraints on utilization of equipment at the Terminal. For example, where Max Midstream has proposed a cap on the combustion capacity or utilization of combustion sources in terms of MMBtu/hour or year, it relies on emission factors that predict how much pollution per MMBtu equipment at the Terminal will emit to calculate the Terminal’s PTE. These emission factors are taken from various sources, including TCEQ guidance, EPA’s AP-42 emission factors document, vendor guarantees that may or may not exist, and other undisclosed sources. If the Draft Permit is approved, these emission factors become conditions of the air permit. *See* 30 Tex. Admin. Code § 116.116(a) (making application representations regarding construction and operation of a source enforceable conditions of an air permit).

Unfortunately, Max Midstream failed to show that these emission factors reliably predict maximum potential emissions from the Terminal, given the proposed utilization constraints, and the Draft Permit fails to establish monitoring requirements that make the emission factors practicably enforceable. Accordingly, the synthetic minor limits Max Midstream has proposed are not practicably enforceable and do not effectively limit the Terminal’s potential to emit. Because these emission factors are unreliable and unenforceable, and because the gap between the synthetic minor limits proposed by Max Midstream and the applicable significance threshold is much smaller than the probable margin of error for the calculation methods Max Midstream has used, Max Midstream has failed to establish that this project is minor.

These practically unenforceable, unjustified, and unreliable emission factors also undermine the Company’s air quality impacts demonstration. Accordingly, Max Midstream has failed to demonstrate that a *minor* source permit is the appropriate vehicle for authorizing construction of the expansion project, *Id.* at § 116.111(a)(2)(B), (G), (I), that the project complies with applicable PSD preconstruction permitting requirements, *id.*, and that air quality impacts from the expanded Terminal will not endanger public health, welfare, and the environment. *Id.* at § 116.11(a)(2)(A), (J).

**Table 2: Bases for Max Midstream Application Emission Calculations**

Unit Type	Activity/Pollutant	Basis	Application Page
Storage Tanks	Routine working and breathing emissions	AP-42, Section 7.1 (March 2020)	5-1
	Short-term emission rates	AP-42, Section 7 equations with max. Temp. And vapor pressure per TCEQ Guidance Document APDG 6419v2 (February 2020)	

Marine Vessel Loading	Uncontrolled loading losses	AP-42, Section 5.2, Equation 1	5-2
	VCU VOC emissions 99.9% DRE	Vendor guarantee	
	Uncollected fugitive based on efficiency of 99.89% for inerted ship and ocean-going barge loading, 100% for vacuum loading activities	TCEQ Air Permit Technical Guidance for Chemical Sources: Flares and Oxidizers, October 2002	
	VCU NO <sub>x</sub> and CO emissions	Vendor guaranteed emission factors and a vapor heat content of 20,000 Btu/lb	
	VCU PM/PM <sub>10</sub> /PM <sub>2.5</sub> , SO <sub>2</sub> from assist gas	AP-42, Section 1.4	
Emergency Flare	VOC DRE 99% for straight-chained organic compounds 3 carbons or less, 98% other compounds	TCEQ Guidance	5-3
	NO <sub>x</sub> and CO	Calculated based on heat input of the material being combusted and TCEQ emission factors	
	VOC and SO <sub>2</sub> from pilot gas	AP-42, Section 1.4 emission factors for natural gas combustion.	
Equipment Fugitives		Estimated using methods outlined in TCEQ's guidance web page for Equipment Leak Fugitives. Number of components times emission factor.	5-3
Storage Tank Floating Roof Landing Losses (MSS)		Subsection 7.1.3.3 Floating Roof Landing Losses, Section 7.1 AP-42 (March 2020)	5-4

Storage Tank Refilling Losses (MSS)		Subsection 7.1.3.3.1, Section 7.1 AP-42	5-5
Storage Tank cleaning, refilling, and degassing (MSS)	VOC concentrations higher than 10,000 ppmv routed to control	TCEQ's Air Permit Guidance for Chemical Sources: Flares and Oxidizers (October 2002)	5-5
Equipment Venting (MSS)	VOC, NO <sub>x</sub> , SO <sub>2</sub> , PM/PM <sub>10</sub> /PM <sub>2.5</sub> and CO	Estimated from vapor combustion	5-6
Vacuum Truck and Frac Tank Loading (MSS)		AP-42, Section 5.2	5-6
Pipeline Pigging Emissions (MSS)		Carbon canister emissions are estimated based on vapor flow rates and a carbon breakthrough concentration of 100ppmv	5-7

**1. Max Midstream failed to justify its reliance on AP-42 emission factors and equations.**

Max Midstream's application and the TCEQ's review of that application rely heavily upon AP-42 emission factors to calculate the Terminal's potential to emit, which, in turn, provides the basis for Max Midstream's impacts and BACT demonstrations. AP-42 is a compilation of air pollutant emission factors developed by EPA, which has been published since 1972.<sup>3</sup> These emission factors were developed to provide approximations of average emissions from certain *kinds* of activities and equipment. They were not intended to be used as the primary point of reference for source-specific permitting and enforcement. According to EPA, an AP-42 emission factor is:

a representative value that attempts to relate the quantity of a pollutant released to the atmosphere with an activity associated with the release of that pollutant. These factors are usually expressed as the weight of pollutant divided by a unit weight, volume, distance, or duration of the activity emitting the pollutant (e.g., kilograms of particulate emitted per megagram of coal burned). Such factors facilitate

<sup>3</sup> Available electronically at: <https://www.epa.gov/air-emissions-factors-and-quantification/ap-42-compilation-air-emissions-factors>

estimation of emissions from various sources of air pollution. *In most cases, these factors are simply averages of all available data of acceptable quality*, and are generally assumed to be representative of *long-term averages* for all facilities in the source category (i.e., a population average).

AP-42 (1995), Introduction at 1 (underlining in original, italics added).<sup>4</sup>

EPA has long warned that AP-42 that AP-42 emission “factors are not likely to be accurate predictors of emissions from any one specific source, except in very limited scenarios.” EPA Reminder About Inappropriate Use of AP-42 Emission Factors, Publication No. EPA 325-N-20-001 (November, 2020) (“Enforcement Alert”).<sup>5</sup> Specifically, EPA has explained that “[u]se of these factors as source-specific permit limits ... is not recommended by EPA.” AP-42 (1995), Introduction at 1. This is so:

*Because emission factors essentially represent an average of a range of emission rates, approximately half of the subject sources will have emission rates greater than the emission factor and the other half will have emission rates less than the factor. As such, a permit limit using an AP-42 emission factor would result in half of the sources being in noncompliance.*

*Id.* (emphasis added).

In an enforcement alert released just last year, EPA emphasized an additional reason that AP-42 emission factors should not be used to establish or determine compliance with source-specific emission limits:

With the advent of 1-hour and short-term National Ambient Air Quality Standards (NAAQS), permit limits must be able to account for short term fluctuations. AP-42 emission factors also do not account for short term variation in emissions as the emission factors are intended for use in developing area-wide annual or triannual inventories. In developing emission factors, test data are typically taken from normal operating conditions and generally avoid conditions that can cause short-term fluctuations in emissions. These short-term fluctuations in emissions can stem from variations in process conditions, control device conditions, raw materials, ambient conditions, or other similar factors. This means that if facilities use AP-42 emission factors as permit limits, facilities increase their chances of violating their short-term permit limits. It also increases the likelihood of a geographic area’s non-compliance with the NAAQS.

Enforcement Alert at 1-2.

Thus, Max Midstream should not be allowed to use AP-42 emission factors and equations to demonstrate that the Terminal expansion does not trigger PSD preconstruction permitting

---

<sup>4</sup> Available electronically at: <https://www.epa.gov/sites/production/files/2020-09/documents/c00s00.pdf>

<sup>5</sup> Available electronically at: <https://www.epa.gov/sites/production/files/2021-01/documents/ap42-enforcementalert.pdf>

requirements or that impacts from the expansion project are acceptable without providing a justification that this case is one of the “very limited scenarios” where reliance on AP-42 to predict emissions from a specific source over both long and short-term averaging periods is appropriate.

These warnings, from the government agency responsible for publishing, developing, and collecting the very emission factors Max Midstream relies upon in this case must be taken seriously. EPA’s warnings about the practical limitations of AP-42 emission factors generally is bolstered by EPA’s characterization of the specific AP-42 equation Max Midstream used to calculate maximum loading losses for the Terminal. This calculation is key to Max Midstream’s claim that the expansion project is minor for purposes of PSD, because the amount of pollution lost during loading activities determines the utilization of the propose vapor combustion units (“VCUs”), which account for almost all of the NO<sub>x</sub> and CO the Terminal will emit. A NO<sub>x</sub> or CO increase of less than 4% from these VCUs would be sufficient to trigger PSD preconstruction requirements.

**Table 3: Terminal Expansion NO<sub>x</sub> and CO Emissions Increases**

Pollutant	Represented Source-Wide Emissions (TPY)	Major Source Threshold (TPY)	Difference (TPY)	4% of Marine Control Emissions Cap (TPY)
NO <sub>x</sub>	97.03	100	2.97	3.5
CO	97.35	100	2.65	3.5

This razor thin margin is a huge problem for Max Midstream, because the equation the company relies upon to determine how much pollution will be combusted in the proposed VCUs has *“a probable error of +/- 30 percent.”* AP-42, Section 5.2 at 5.2-4 (emphasis added).<sup>6</sup> Max Midstream should not be allowed to rely on such an imprecise equation to determine the maximum potential annual loading losses from the Terminal because an increase of even 4%—much less than the margin of probable error built into the loading loss equation—would likely result in an increase in NO<sub>x</sub> emissions sufficient to trigger PSD requirements. And while it may not be a certainty that an increase in loading losses will drive a one-to-one increase in NO<sub>x</sub> and/or CO emissions from Max Midstream’s VCUs, given that the composition of the loading displacement gas changes, which affects the heat content, and that, in turn affects NO<sub>x</sub> and CO emissions from the VCUs, the relationship will be very close to one-to-one on an annual basis. Accordingly, it is unreasonable for Max Midstream to rely on an equation that builds in a probable error rate of 30% to calculate loading losses from the Terminal to demonstrate that the project is minor, when a mere increase of 4% would likely trigger major NSR requirements.

If the TCEQ wishes to allow Max Midstream to rely on AP-42 emission factors and the AP-42 loading loss equation to limit the Terminal’s potential to emit, the agency must establish monitoring methods that are sufficient to determine whether emissions from the Terminal are consistent with the generic emission factors used to establish the Draft Permit’s synthetic minor

<sup>6</sup> Available electronically at: [https://www.epa.gov/sites/production/files/2020-09/documents/5.2\\_transportation\\_and\\_marketing\\_of\\_petroleum\\_liquids.pdf](https://www.epa.gov/sites/production/files/2020-09/documents/5.2_transportation_and_marketing_of_petroleum_liquids.pdf)

limits. Otherwise, the only enforceable constraints on Max Midstream's potential to emit are the throughput and operational limits represented in the application, which do not ensure that emissions from the Terminal will remain below the applicable significance threshold unless emissions from the Terminal are consistent with the practicably unenforceable emission factors. To make the Draft Permit's synthetic minor limits enforceable, the TCEQ must require Max Midstream to operate NO<sub>x</sub>, CO, and VOC CEMS on its VCUs and to use optical gas imaging to monitor for fugitive leaks. Without such direct monitoring, the synthetic limits Max Midstream has agreed to are not practicably enforceable and may not be used to avoid PSD preconstruction permitting requirements. If Max Midstream thinks the cost of enforceable synthetic limits is too high, the proper solution is not approving unenforceable synthetic minor limits; it is requiring Max Midstream to obtain a PSD permit.

Max Midstream also claims—without support—that its proposed emergency flare will not emit *any* particulate matter (“PM”). Completely eliminating all PM from flares is very difficult, especially with flares—like the one Max Midstream proposes to construct—that are not steam assisted. AP-42 indicates that PM from flares most often falls within a range of 0-274 lb/10<sup>6</sup> BTU. AP-42, Section 13.5, 13.5-4 (Table 13.5-1).<sup>7</sup> It is very unlikely that Max Midstream will be able to *completely* eliminate PM emissions from its flare on a continuous basis without additional monitoring and control technology that is not required by the Draft Permit. Thus, potential PM emissions from the Terminal represented Max Midstream's application and used to model air quality from the Terminal almost certainly fail to account for all PM that the Terminal will actually emit.

Before the TCEQ may finalize the Draft Permit, it must establish monitoring, testing, and recordkeeping requirements sufficient to assure continuous compliance with the zero PM emissions representation or require Max Midstream to use a more realistic particulate matter emission rate to model air quality impacts from its emergency flare. Monitoring sufficient to ensure continuous compliance is critical, because “[w]ith the advent of ... short-term National Ambient Air Quality Standards [, including 24-hour standards for PM<sub>2.5</sub> and PM<sub>10</sub>,] permit limits must be able to account for short term fluctuations.” Enforcement Alert at 1.

**2. The Draft Permit fails to assure compliance with Max Midstream's representations regarding the destruction and removal efficiency of its proposed vapor combustion units.**

According to Max Midstream's initial application, represented NO<sub>x</sub> and CO emission rates from the proposed VCUs as well as the represented VCU VOC destruction and removal efficiency (“DRE”) of at least 99.9% were “based on vendor guaranteed emission factors and a vapor heat content of 20,000 Btu/lb.” Application at 5-2, 5-5. However, when the TCEQ asked Max Midstream to provide this vendor data, so that Max Midstream's emissions calculations could be verified, Max Midstream replied that it has not actually obtained a vendor guarantee:

The vendor selection process is currently underway and a final decision on vendors has yet to be made. However, the attached updated Table A-6 VCU NO<sub>x</sub> and CO

---

<sup>7</sup> Available electronically at: <https://www3.epa.gov/ttnchie1/ap42/ch13/final/c13s05.pdf>

emission factors are representative of vapor control devices installed at similar terminals and achieve controls which exceed recent BACT determinations.

Response to TCEQ, Dated November 20, 2020 at Response 6.

Max Midstream's application represents a very high VOC DRE of 99.9% at a relatively low minimum combustion temperature of 1,400° F. This DRE is so high, in fact, that Max Midstream contends that it cannot be confirmed by stack testing. Email from Neal Nygaard to Ariel Ramirez, dated February 1, 2021 ("Modern VCUs are capable of achieving control at levels which result in stack exit concentrations that may be below the applicable monitoring detection limits."). To address this possibility, the Draft Permit allows Max Midstream to demonstrate compliance with the 99.9% DRE representation by maintaining VOC emissions from the VCUs at or below 10 ppm at 3% oxygen during the initial stack test. Draft Permit at Special Condition No. 14.

There are several problems with Max Midstream's DRE representations. First, Max Midstream attempts to downplay its initial misrepresentation that the represented VCU DRE is supported by a vendor guarantee by explaining that the represented DRE is also consistent with "vapor control devices installed at similar terminals and achieve controls which exceed recent BACT determinations." But Max Midstream failed to identify any of these similar sources and did not provide information showing that these other VCUs would be able to continuously achieve a 99.9% DRE under conditions comparable to those at the Terminal. It is not enough for Max Midstream to show that controls at other unspecified sources have achieved the "beyond BACT" level of control the company has represented to avoid triggering PSD requirements (and Max Midstream has not even done this). Max Midstream must also demonstrate that its source will achieve that level of control. 30 Tex. Admin. Code § 116.111(a)(2)(G).

Max Midstream also failed to demonstrate that the proposed alternative measure of compliance for its VCUs' VOC DRE, 10 ppmv at 3% O<sub>2</sub>, is equivalent to the represented 99.9 % DRE. If Max Midstream must use this alternative to demonstrate compliance with its permit, the company should also be required to use the alternative emission rate to model crude-related air quality impacts. Additionally, Max Midstream's proposal to demonstrate compliance with DRE representations by conducting a single stack test is unacceptable. There are various factors that affect a VCU's performance, including changes in the composition of the materials being combusted. Max Midstream contends that it would not be practical to establish throughput limits for the various materials it will handle at the Terminal, "due to the varying nature of crude oils and crude oil condensates and customer markets at the terminal." Application at 5-1.<sup>8</sup> Given this variability, the very high level of control represented and the proximity of Max Midstream's represented VOC emissions to the PSD significance threshold, Max Midstream must be required to conduct more frequent monitoring of its VCUs' emissions. Specifically, Max Midstream should be required to use VOC CEMS to monitor emissions from its VCUs and to assure compliance with its synthetic minor permit limits across all the different operating conditions authorized by the

---

<sup>8</sup> Max Midstream's suggestion that it is not bound by represented throughput limits represented in its application is mistaken. These throughput limits will be conditions of the Draft Permit, if it is issued. 30 Tex. Admin. Code § 116.116(a).

Draft Permit. Otherwise, Max Midstream should be required to obtain a PSD permit before constructing the Terminal expansion, because the synthetic VOC limits it took to avoid PSD are not practicably enforceable and do not effectively limit the Terminal's potential to emit.

Finally, Commenters are also concerned that Max Midstream failed to show that it will be able to maintain the represented DRE from its VCUs while also complying with represented emission rates for VCU NO<sub>x</sub> and CO. According to Max Midstream's application, the VCUs will achieve a VOC DRE of 99.9%, so long as the combustion zone temperature is maintained above 1,400° F. Draft Permit at Special Condition No. 17(A). This is a relatively low combustion zone temperature, and it is unclear that it will be sufficient to maintain the represented DRE across all operating scenarios. For example, Max Midstream indicates that its emergency flare will maintain a temperature of 1,832° F to achieve a much lower DRE between 98 and 99%. Additionally, Max Midstream's February 2021 update to its emission calculations indicates that the operating temperature for its VCUs will be 1,600° F and not 1,400° F required by the Draft Permit. *See* Annual Crude/Crude Condensate Inputs Table, dated February 2021. Given these inconsistencies in Max Midstream's application representations, and given the fact that increasing the VCU combustion zone temperature will result in higher NO<sub>x</sub> emissions, the TCEQ should require Max Midstream to install VOC, NO<sub>x</sub>, and CO CEMs on its VCUs to determine the proper combustion zone temperature necessary to comply with the represented DRE and to clarify whether this temperature can be maintained without exceeding represented NO<sub>x</sub> and CO emission rates taken to avoid triggering PSD preconstruction requirements. If this measure is unacceptable to Max Midstream, the TCEQ should require the company to apply for a PSD permit, because the synthetic limits taken to avoid triggering these requirements are not otherwise practicably enforceable.

**B. Max Midstream failed to demonstrate compliance with applicable Texas BACT requirements.**

In Texas, projects that are not subject to federal major NSR requirements must comply with Best Available Control Technology, or "BACT," requirements established by the Texas Clean Air Act and the TCEQ's regulations implementing the Texas Clean Air Act. 30 Tex. Admin. Code §§ 116.10(1), 116.111(a)(2)(C). According to this standard, proposed pollution controls must be at least as good as those accepted as BACT in recent permit reviews for the same process and/or industry, unless the applicant demonstrates that such controls would not be as effective at the proposed source, the controls cannot be used at the proposed source due to technical constraints, or that using those controls would be economically unreasonable. *See*, TCEQ Air Permit Reviewer Reference Guide, APDG 6110, Air Pollution Control ("BACT Guidance"), dated January 2011 at 12-13. As the TCEQ's BACT Guidance explains, "BACT for any particular industry is not static," and "before accepting a BACT proposal "[t]he permit reviewer must ensure that the administrative record provided by the applicant ... is sound, comprehensive, and adequately supports the conclusions of the BACT review." *Id.* at 11. The BACT Guidance also explains that the "applicant must fully document the basis for air pollution control determinations as it is the applicant's responsibility to adequately demonstrate that the permit should be issued." *Id.* at 1. *See also* 30 Tex. Admin. Code § 116.111(a)(2)(C).

Max Midstream's BACT demonstration is deficient because it fails to include *any* specific information about control technologies applied and control efficiencies achieved at recently authorized similar sources. What's more, Max Midstream failed to identify any such sources that informed its analysis. Accordingly, Max Midstream has failed to make the demonstration required by § 116.111 and the TCEQ's BACT Guidance. Below, Commenters flag some additional problems with specific representations related to BACT in Max Midstream's application materials. These problems are illustrative rather than exhaustive and Commenters reserve the right to present evidence regarding other deficiencies in Max Midstream's BACT demonstration at a contested case hearing.

**1. The proposed NO<sub>x</sub> emission rates for VCU units CONT-1 and CONT-2 are too high and the lower limits for the other VCUs are unsupported.**

The Draft Permit establishes two different sets of NO<sub>x</sub> and CO pollution requirements for VCUs at the Terminal. According to the Draft Permit, units CONT-1 and CONT-2 must comply with a performance standard of 0.10 lb/MMBtu for NO<sub>x</sub> and CO. Draft Permit at Special Condition No. 18(D). Units CONT-3 through CONT-11 and CONT-15 through CONT-23 must comply with the significantly more stringent performance standard of 0.02 lb/MMBtu for NO<sub>x</sub> and CO. *Id.* If a standard of 0.02 lb/MMBtu for NO<sub>x</sub> and CO is BACT for these units, it should also be required as BACT for units CONT-1 and CONT-2, unless Max Midstream demonstrates that there are technical reasons CONT-1 and CONT-2 will be unable to comply with the more stringent standards or that uniform compliance with the more stringent standards is not economically reasonable. Max Midstream has not attempted this demonstration. Accordingly, its application is incomplete.

On the other hand, Max Midstream has also failed to demonstrate that its VCUs will be able to achieve ongoing compliance with the more stringent 0.02 lb/MMBtu NO<sub>x</sub> and CO performance standards established by the Draft Permit. This is important because these performance standards are necessary to demonstrate that the expansion project does not trigger PSD preconstruction requirements. Less stringent NO<sub>x</sub> and CO requirements established by two recently-issued permits authorizing VCUs at sources subject to more stringent *federal* BACT requirements cast doubt on the achievability of the lower limits requested by Max Midstream. In 2018, the TCEQ issued a PSD permit authorizing construction of a VCU at Oxy Midstream's Ingleside Energy Center subject to a NO<sub>x</sub> limit of 0.0600 lb/MMBtu. *See* RBLC ID TX-0844.<sup>9</sup> Then, in 2020, the TCEQ issued a permit authorizing construction of a VCU at Motiva's Port Arthur Refinery with a NO<sub>x</sub> limit of 0.1380 lb/MMBtu. *See* RBLC ID TX-0879.<sup>10</sup> Emissions from the VCUs at the Seahawk Terminal that only comply with these less stringent limits would result in NO<sub>x</sub> emissions increases triggering PSD preconstruction permitting requirements. And while Max Midstream initially represented that its proposed 0.02 lb/MMBtu CO and NO<sub>x</sub> emission limits were supported by a vendor guarantee, Max Midstream has since backtracked from that

<sup>10</sup> Available electronically at:

[https://cfpub.epa.gov/rblc/index.cfm?action=PermitDetail.ProcessInfo&facility\\_id=28715&PROCESS\\_ID=113111](https://cfpub.epa.gov/rblc/index.cfm?action=PermitDetail.ProcessInfo&facility_id=28715&PROCESS_ID=113111)

statement. Accordingly, Max Midstream should be required to provide evidence that its proposed emission rates for CO and NO<sub>x</sub> are achievable and the TCEQ should revise the Draft Permit to include continuous direct monitoring to assure compliance with the represented NO<sub>x</sub> and CO emission rates. If Max Midstream is unwilling to accept such monitoring requirements, the TCEQ should require it to obtain a PSD permit before constructing the Terminal expansion.

**2. The Leak Detection and Repair program mandated by the Draft Permit is not consistent with applicable Texas BACT requirements.**

The Draft Permit identifies the TCEQ's 28VHP LDAR program as BACT for fugitive emissions. Draft Permit at Special Condition No. 19. This determination and Max Midstream's application supporting the determination are deficient for several reasons. First, BACT should include a set of technologies that eliminate fugitive VOC emissions to the greatest extent practicable. Such measures include using sealless pumps and compressors as well as leakless valves in every instance, unless Max Midstream demonstrates that there are process constraints or other reasons why that cannot be done cost-effectively. These technologies have been available for decades, and yet there was no consideration of such preventative technologies in Max Midstream's BACT analysis.

Second, using any type of LDAR as BACT for fugitive emissions is unreliable and technically obsolete. Common deficiencies with LDAR programs, including the TCEQ's 28VHP program, are: not identifying all components; using wrong leak definitions; not following Method 21 properly; failing to monitor the maximum leak location; not monitoring long enough to identify existing leaks; holding the Method 21 probe too far away from components; using incorrect or expired calibration gas; not repairing leaking components within the time period specified by the relevant permit; and not keeping detailed and accurate records. LDAR programs, like the one mandated by the Draft Permit, rely on human beings to properly implement a monotonous, repetitive, and tedious set of measurements at hundreds or thousands of individual components in a single day. Given these conditions, it is unsurprising and perhaps inevitable that LDAR programs are often far-less effective at identifying and controlling fugitive emissions than billed.

Third, even if LDAR is a necessary component of BACT for fugitives in this case, Max Midstream failed to demonstrate that 28VHP is the most effective economically reasonable LDAR program available.<sup>11</sup> The TCEQ has required compliance with stricter LDAR programs in several recently-issued permits. For example, the TCEQ's 28MID program is in use at the NuStar Corpus Christi Terminal and the Motiva Port Arthur Refinery. Thus, according to the TCEQ's three-tiered BACT methodology, Max Midstream should be required to match these stricter control requirements unless it provides specific evidence demonstrating that the requirements are workable for the Seahawk Terminal or that they are economically unreasonable. Max Midstream's application does not attempt such a demonstration, and, accordingly, it fails to establish that 28VHP is BACT for fugitives in this case.

---

<sup>11</sup> Information about the TCEQ's various LDAR programs is available electronically at: [https://www.tceq.texas.gov/permitting/air/guidance/newsourcereview/fugitives/nsr\\_fac\\_eqfug.html](https://www.tceq.texas.gov/permitting/air/guidance/newsourcereview/fugitives/nsr_fac_eqfug.html)

Finally, even if a LDAR program is selected as BACT in this case, it should be supplemented using surveillance tools, like optical gas imaging. LDAR supplemented by OGI is superior to LDAR alone because it allows sources to rapidly identify sources of large leaks, allowing such leaks to be repaired quickly, which, in turn, significantly reduces fugitive emissions. These advantages are so significant that EPA has included OGI in its New Source Performance Standards (“NSPS”) for oil and natural gas facilities since 2016. Industry has also long recognized the weaknesses of LDAR programs and that supplementing LDAR programs with OGI offers a significant improvement over LDAR programs alone. The improved leak detection and repair time possible with the use of OGI benefits both the environment and the operator. ExxonMobil provided the following graphical illustration on the benefits of using OGI:<sup>12</sup>

## Method 21 vs. OGI for LDAR

### Method 21

- Finding a leak is like looking for a needle in a haystack – and you need to inspect every “straw”!
- Inspecting hundreds of components to find one leak (or no leaks)

### OGI Technology

- OGI allows for rapid screening of components – focusing on the “needle” rather than every “straw”
- Much more efficient method for finding significant leaks
- Potential to reduce the cost of LDAR compliance

Because OGI is a proven technology that is required by the Oil and Gas NESHAP and that has been successfully implemented at existing sources to reduce fugitive emissions, the TCEQ should require it as part of the BACT regime for reducing fugitive emissions at the Seahwak Terminal.

<sup>12</sup> New Optical Gas Imaging Technology for Quantifying Fugitive Emission Rates, Powerpoint Presentation by Providence Photonics and ExxonMobil, available electronically at: <http://content.4cmarketplace.com/presentations/NewOpticalGasImagingTechnologyforQuantifyingFugitiveEmissionRates4C2015.pdf>

## VI. Conclusion

Commenters have demonstrated that Max Midstream has failed to make demonstrations required by 30 Tex. Admin. Code § 116.111, that S. Diane Wilson and Waterkeeper are entitled to a contested case hearing on Max Midstream's application and the Draft Permit, and that the Executive Director or Office of the Chief Clerk should convene a public meeting concerning this project. Accordingly, the TCEQ may not issue the requested permit authorizing Max Midstream's proposed expansion project before correcting the deficiencies Commenters have identified and convening a contested case hearing to consider contested issues of fact and law preserved by the Initial Comments and supplemented by this filing.

Sincerely,

/s/ Gabriel Clark-Leach

**Re: Comments and Contested Case Hearing Request Concerning Max Midstream Texas LLC's Application for Permit No. 162941, Authorizing an Expansion of the Company's Seahawk Terminal, Located in Calhoun County, Texas**

Dear Ms. Bohac,

Diane Wilson, San Antonio Bay Waterkeepers, Texas Rio Grande Legal Aid, and Environmental Integrity Project ("Commenters") appreciate this opportunity to comment on and **request a contested case hearing** regarding Max Midstream Texas LLC's ("Max Midstream") application for New Source Review ("NSR") Permit No. 162941, which would authorize an expansion of the company's existing Seahawk Crude Condensate Terminal ("Terminal"), in Point Comfort, Calhoun County, Texas. The proposed expansion project would authorize construction of eight new storage tanks, seven marine loading docks and associated vapor combustion units, three firewater pumps, piping fugitives, and authorize planned maintenance, startup, and shutdown ("MSS") activities.

#### **DISPUTED ISSUES OF FACT**

The Terminal is currently classified as a minor source of air pollution and existing units at the Terminal are authorized by and subject to requirements in Permit by Rule ("PBR") Registration No. 98075. Because the Terminal is characterized as an existing minor source and proposed project increases are less than the applicable major source threshold (100 TPY of any criteria pollutant), Max Midstream contends that the expansion project as a minor modification even though project increases exceed the applicable major modification thresholds for NO<sub>x</sub> (40 TPY) and Ozone (40 TPY NO<sub>x</sub> or VOC). *See* 30 Tex. Admin. Code § 116.12(20) ("At a stationary source that is not major prior to the increase, the increase by itself must equal or exceed that specified for a major source.").

Commenters, however, have been unable to fully evaluate Max Midstream's representation that this project does not trigger major NSR preconstruction permitting requirements and many of

the applicant's representations because crucial application material has been improperly designated confidential by the applicant. Based upon the limited information contained in the publicly-available application file, Commenters request a contested case hearing on the following issues of disputed fact:

- Max Midstream's application failed to include information sufficient to demonstrate that emissions from the proposed new and modified facilities and activities meet all of the criteria established by Texas's federally-approved preconstruction permitting rule at 30 Texas Administrative Code § 116.111(a)(2).
- Max Midstream's application failed to include a demonstration, including modeling, that demonstrates that emissions from the requested project will be protective of the health and property of the public. *Id.* at § 116.111(a)(2)(A)(i) and (J). Additionally, while the application does contain information about potential parameters for a modeling demonstration that was not included in the application, Max Midstream failed to include any information establishing that these parameters were properly determined and reflect worse-case emissions from the Terminal under the requested authorization.
- The application fails to demonstrate that monitoring, testing, and recordkeeping requirements proposed by the applicant are sufficient to measure emissions related to the proposed project and to ensure that emission limits in the requested permit are practicably enforceable. *Id.* at § 116.111(a)(2)(B).
- Max Midstream contends that the federal Clean Air Act's Best Available Control Technology ("BACT") requirements do not apply to this project, because the Terminal is a minor source and the project is a minor modification. Accordingly, the application does not attempt to demonstrate compliance with federal BACT requirements. Max Midstream, however, failed to demonstrate that the project is a minor modification.

New and modified units that would be authorized as part of the proposed project have the physical capacity to emit criteria pollutants at levels that exceed applicable major source thresholds. For example, Max Midstream proposes to construct 18 marine vapor combustion units and has requested a permit authorizing each of these units to emit 15 pounds of NO<sub>x</sub> and CO per hour. Application, Permit No. 162941 at Table 1-2. The applicable major source threshold for each of these pollutants is 100 tons per year. *Id.* at Table 1-1; *see also* 30 Tex. Admin. Code § 116.12(20). If all of these vapor combustion units were operated year round at the requested hourly rate, NO<sub>x</sub> and CO emissions from these units alone would be almost 1,183 tons per year. Yet, the requested annual NO<sub>x</sub> and CO emission cap covering all these units would only authorize Max Midstream to emit 75 tons of NO<sub>x</sub> and CO each year. The publicly-available application materials do not indicate that Max Midstream has requested any operating limitations for these units that would ensure that they will comply with the proposed annual NO<sub>x</sub> and CO emission caps, and the public application materials do not explain how

the monitoring method Max Midstream has proposed—continuous monitoring of VCU exhaust temperature—will be used to determine emissions from the VCUs or establish that this method is sufficient to make the annual emissions cap practicably enforceable, as required to limit the units’ potential to emit for preconstruction permitting purposes.

This same problem applies for the 15 tanks associated with this project, for which Max Midstream has proposed hourly VOC emission rates of 13.40 pounds (tanks TK-06-01, and TK-06-03 through TK-06-15) and 18.42 pounds (TK-06-02). If these tanks emitted the maximum requested hourly VOC rate year round, annual VOC emissions from the tanks would amount to 902 tons. Yet the storage tank annual VOC cap would authorize less than 50 tons per year. The public portion of the application file does not contain any operating limitations that would assure compliance with this annual cap and the application fails to demonstrate how the proposed monitoring regime, throughput monitoring and temperature monitoring, is sufficient to make the proposed cap practicably enforceable.

Without additional operating limitations and monitoring requirements sufficient to make annual emission limits proposed to avoid major New Source Review applicability practicably enforceable, the project’s physical potential to emit VOC, CO, and NO<sub>x</sub> well above applicable major source thresholds dictates that this project should be treated as a major modification, subject to federal BACT requirements. Thus, the application is deficient because Max Midstream failed to demonstrate compliance with federal BACT requirements. 30 Tex. Admin. Code § 116.111(a)(2)(C).

Additionally, Max Midstream appears to use an inapplicable equation to determine emissions related to loading losses at the Terminal. Max Midstream’s application indicates that “[l]oading losses are comprised of the total vapors displace and generated by crude oil and/or crude oil condensates into the marine vessels.” Application, Permit No. 162941 at 5-2. To calculate project emissions rates related to loading losses, Max Midstream relies on Equation 1 from AP-42, Section 5.2. *Id.* Max Midstream’s reliance on this equation is problematic for two reasons. First, according to AP-42, this equation builds in a probable error rate of 30%. AP-42, Section 5.2 at 5.2-4. An equation that may be expected to underestimate actual project emissions by a third does not accurately represent project emissions. Additional VOC emissions within this range of error may be sufficient to trigger major New Source review requirements. Second, AP-42 indicates that Equation 1 should only be used for “products other than gasoline and crude oil.” AP-42, Section 5.2 at 5.2-5. For marine loading of crude oil, as proposed by this project, AP-42 directs usage of Equations 2 and 3, instead of Equation 1. *Id.* at 5.2-5.

The application, moreover, fails to demonstrate compliance with BACT requirements established by the Texas Clean Air Act. As the application makes clear, “[e]ach facility is

evaluated for [BACT] on a case-by-case basis.” Application, Permit No. 162941 at 6-1. According to TCEQ policy, BACT evaluations are conducted using a tiered approach. *Id.* In the first tier, “controls accepted as BACT in a recent permit review for the same process in the same industry are approved as BACT . . . if no new technical developments have been made that would justify additional controls as economically or technically reasonable.” *Id.* The application fails to demonstrate compliance with Texas’s state BACT requirement, because it fails to include any information about the level of control mandated in recent permit reviews for the same industry and does not indicate that Max Midstream made any effort to determine whether improvements beyond the unspecified level of control required by undisclosed recently permitted facilities are achievable. Instead, Max Midstream relies entirely on recommended controls in the TCEQ’s outdated BACT guidance documents. For example, Max Midstream relies on the TCEQ’s five year old guidance document to identify applicable controls for its storage tanks. *Id.* The guidance Max Midstream relies upon for its proposed loading operation was written nearly a decade ago, in 2011. *Id.* at 6-2. The application fails to identify the basis for the proposed BACT determinations for Max Midstream’s VCUs. The flare control requirements and emission factors for NO<sub>x</sub> and CO are based on Texas’s two decades old 2000 guidance on air permitting for chemical flares and vapor oxidizers at chemical sources. *Id.* at 6-3. The SO<sub>2</sub> control requirements for the proposed flare are said to be “consistent” with unidentified “recent BACT determinations for flares.” *Id.* Again, the basis for Max Midstream’s determination that the proposed level of control for VOC flare emissions satisfied applicable Texas BACT requirements is undisclosed. *Id.* at 6-3-6-4. This same kind of treatment renders the application’s BACT demonstrations for fugitives, the proposed emergency generator and firewater pump engines and MSS activities deficient.

- A stationary source that emits or has the potential to emit ten tons or more of any hazardous air pollutant per year or more than 25 tons per year of any combination of hazardous air pollutants is a “major source,” subject to applicable major source requirements in EPA’s National Emission Standards for Hazardous Air Pollutants. According to the application, the Terminal is not a major source of hazardous air pollutants, but the public application fails to include any information supporting this claim. While Max Midstream’s electronic workbook appears to propose site-wide HAP limits consistent with this threshold, it does not identify how much hazardous air pollution the terminal has the physical capacity to emit, which HAPs will be emitted from the Terminal, what operational limits, if any, Max Midstream has requested to assure compliance with these emission limits, or monitoring, testing, and recordkeeping requirements for each kind of unit that will emit HAPs that make the 10/25 ton per year site-wide limits practicably enforceable. Accordingly, Max Midstream failed to make the demonstration required by 30 Texas Administrative Code § 116.111(a)(2)(E), (F), and (K).
- Max Midstream relies on vendor specifications and engineering knowledge to claim that its proposed emission rates will be achieved in practice across all operating scenarios that will be authorized by the requested permit. This information, however, is not included in the public

application file, which fails altogether to demonstrate that the project—if authorized—will achieve the performance specified in the application, as required by 30 Texas Administrative Code § 116.111(a)(2)(G).

- As explained above, this project is subject to major New Source Review preconstruction permitting requirements, because the project's physical capacity to emit criteria pollutants above the applicable major source threshold is not sufficiently constrained by practicably enforceable emission limits and operating limitations. Max Midstream's application is deficient because it does not demonstrate compliance with applicable major New Source Review requirements as mandated by 30 Texas Administrative Code § 116.111(a)(2)(I).

### **CONTESTED CASE HEARING REQUEST**

San Antonio Bay Estuarine Waterkeeper and S. Diane Wilson request a contested case hearing concerning Max Midstream's application for Permit No. 162941 authorizing an expansion project at the Terminal. Communications regarding this hearing request should be directed to Gabriel Clark-Leach at the physical or email address listed below.

#### **1. San Antonio Bay Estuarine Waterkeeper**

San Antonio Bay Estuarine Waterkeeper is part of a national network of Waterkeeper organizations, the Waterkeeper Alliance. San Antonio Bay Estuarine Waterkeeper ("Waterkeeper") is a volunteer-run, non-profit membership organization whose mission is to protect Lavaca Bay, where the Terminal is located, Matagorda Bay and San Antonio Bay, and to educate the public about these ecologically important estuarine systems. Waterkeeper pursues its organizational goals by engaging media sources to publicize areas of concern, hosting public meetings, filing comments and hearing request on permit applications at environmental agencies, notifying government agencies when there are problems in the waterways and air, and filing lawsuits when other alternatives are unavailing.

Lavaca Bay supports a wide range of legally protected interests, including property interests, economic interests, and aesthetic interests, that are recognized and protected by the federal Clean Air Act, the Texas Clean Act and by regulations implementing these statutes. These interests are threatened by air pollution from industrial sources, like the Terminal, and container ships that will be loaded at with crude oil at the Terminal. Waterkeeper members reasonably anticipate that construction and operation of the Terminal expansion project will make Lavaca Bay less fishable, diminish natural resources Waterkeeper members rely upon for their livelihoods, interfere with members' longstanding and deeply fulfilling recreational activities in the Bay and the surrounding area, interfere with members' use and enjoyment of their own property, and increase members' unwanted exposure to air contaminants regulated by federal and state law.

Waterkeeper members who will be affected by the proposed Terminal expansion project include, but are not limited to:

- Dale Jurasek, who lives approximately five miles east of the Terminal;
- Mauricio Blanco, who lives approximately six miles west of the Terminal; and
- S. Diane Wilson, who lives between Seadrift and Port O'Connor, near the intracontinental waterway approximately 15 miles southwest of the Terminal.

Each of these members lives, works, and recreates in areas that will be exposed to increased air pollution from the Terminal if Max Midstream's application for Permit No. 162941 is approved. Members of Waterkeeper walk the beaches of Lavaca Bay and swim and boat in its waters. Waterkeeper members reasonably worry that increased pollution from the proposed expansion project will negatively affect their own health, the health of their families, and interfere with the use and enjoyment of their property. Waterkeeper members are also concerned about the damage to the beaches, wetlands, shores, bays, and wildlife and marine life that depend on those resources that will result from construction and operation of the proposed Terminal expansion project. These injuries to the interests of Waterkeeper members are not generalized, abstract, or theoretical. Waterkeeper members include commercial fisherman, shrimpers, and oystermen whose livelihoods depend upon the health of the Lavaca Bay ecosystem. Waterkeeper members have a deep aesthetic and recreational connection to the Bay, which has developed over many years of active use of the Bay and surrounding lands and that is not widely shared by members of the general public.

## **2. S. Diane Wilson**

S. Diane Wilson has spent her life working in the local bays surrounding Calhoun County; including Lavaca/Matagorda Bays and San Antonio Bays. For four generations, Ms. Wilson and her family have relied upon these bays for their financial, physical, and spiritual well-being. Ms. Wilson, following in the footsteps of her parents and her grandparents, worked in Lavaca Bay where the Terminal is located, Matagorda Bay, and San Antonio Bay for forty years as a commercial fisherman, shrimper, oysterman, fin fisher, and as a manager at a fish house. Though she has retired from those professions, she continues to rely on the fishing trade in Lavaca Bay as a net builder and mender in the shrimping industry. Ms. Wilson's deep connection with the waters and trades that are directly endangered by air pollution from industrial sources, like the Terminal, is highly personal, specific, and encompasses interests that are not shared by the general public. Ms. Wilson has participated formally in administrative proceedings before the EPA and TCEQ to ensure that government decisions—including air and water permitting decisions—that could compromise the ecological integrity of the Lavaca Bay system strictly comply with federal and state anti-pollution requirements and that risks of environmental harm resulting from industrial

development in the area are properly addressed and minimized. Ms. Wilson has also participated in litigation against polluters that have violated federal pollution control requirements.

Ms. Wilson has dedicated decades of her life working to protect Texas bays from pollution and degradation. The bays not only support her financially. They are also precious to her. From time to time, Ms. Wilson goes out on a skiff into Lavaca and Matagorda Bays. She swims with her children and grandchildren in Matagorda Bay at Magnolia Beach. She is a monitor that kayaks weekly on the bays and creeks and shores surrounding the project area. Ms. Wilson's enjoyment of the Bays near her home has been diminished, and in some cases thwarted entirely, by upset events at industrial facilities with the same kind of equipment—tanks, flares, and VCUs—that will be constructed as part of the proposed Terminal expansion project. Given this experience, Ms. Wilson's belief that the TCEQ's failure to ensure compliance with state and federal pollution control requirements that apply to the proposed expansion project threatens her physical, economic, and spiritual well-being is well-founded. Ms. Wilson is an affected person with standing to participate in a contested case hearing to ensure that any permit issued by the TCEQ authorizing construction of the Terminal expansion project is sufficiently protective.

### CONCLUSION

Commenters appreciate the opportunity to file these comments and this hearing request and reserve the right to provide additional information on the matters discussed in this document as allowed by the Clean Air Act, the Texas Clean Air Act, and regulations implementing these statutes.

Sincerely,

/s/ Gabriel Clark-Leach

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the impact of the Max Midstream project in the Matagorda/ Lavaca Bays and how it will affect the health of the bays, lives our local fishermen, and communities. I am a 4th generation fisherwoman and we have lived in this area for 130 years. I have been following this story very closely and am appalled by the company's blatant disregard for the environment and the community. Not once has the company Max Midstream bothered to talk to any local citizens in this county about this project other than grand plans that includes dredging a bay filled with mercury. Some of the parties initially involved in obtaining the Skyhawk terminal walked away after looking at the Alcoa, Formosa, and mercury issues and said it was an environmental disaster.

I am also deeply concerned that TCEQ has expedited this permit application and also seemed to have expedited the public hearing when I was told by the TCEQ official in charge that the public hearings did not work on expedited process but were 'first come, first serve.' I was told the public hearing would be in late September and possible person to person. Then a week or so later and after Max official visited TCEQ, the hearing was suddenly early August and virtual. It is amazing that TCEQ could see that there was a need of a public hearing because of the 'significant public interest' yet then significantly expedite the hearing and make it virtual and extremely difficult for working, Hispanic fishermen to speak and be heard. And again, Max Midstream does not show their faces to the people that their oil export terminal and subsequent dredging will impact.

There are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this. In fact, the CEO, Todd Edwards, spent most of his career in real estate. I am also very concerned about the financial instability of the proposed facility. I have had repeated phone calls from a petroleum trader who had personal guarantees signed by parties connected with Max Midstream and the trader is now on the verge of suing them for nonpayment. And just recently the barges that Max Midstream had been loading for 2 months suddenly stopped without informing anyone. Everyone at the port was in a lurch.

Finally, I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed will be a monumental error on the part of TCEQ.

Sincerely,  
Diane Wilson

**Subject:** Public Meeting on Permit No. 162941

Dear Chief Clerk Gharis and Team Leader Stanford:

I am writing on behalf of my client, San Antonio Bay Estuarine Waterkeeper, to request that the public meeting concerning draft air quality permit number 162941 be held in-person in Point Comfort to facilitate full participation by the affected community. While this permitting project generated a large number of online requests for a public meeting, I have been informed by my client that many of those who will be hurt most by the proposed expansion project have limited access to the internet and are highly skeptical that a virtual meeting will allow for effective input.

This project threatens to significantly alter the landscape of the region and many locals are concerned that it will harm their livelihood and make it more difficult for them to provide for their families. Given the significant number of requests for a public meeting received during the second public comment period and the massive potential impact of this project on the area, the people of Point Comfort and surrounding communities should have the opportunity to voice their concerns to the TCEQ and Max Midstream, face-to-face, at an in-person public meeting. If the TCEQ and Max Midstream wish to *effectively* assure the people of Point Comfort that this project will not unduly harm them, this message must be made person to person, face to face. Our request for an in-person public meeting is not a special request. Instead, we are asking for the same opportunities for public participation that are typically provided when a public meeting request is approved. If that means the meeting must be scheduled for late September, rather than mid-August, so be it. Such a short delay should not prevent the people of Point Comfort from receiving an in-person public meeting, consistent with the TCEQ's regular practice.

Thank you for your attention and please do not hesitate to contact me if you wish to discuss this matter further.

Sincerely,

Gabriel Clark-Leach

Subject: Reject Max Midstream's Air Permit!

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

I lived in Texas for 35 years, why did I leave? Companies like Max Midstream, who put profit above the health of the residents of Texas.

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

**Subject:** Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)

To Whom It May Concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

I look forward to your response.

Dear TCEQ,

Hopefully you will get to read this before we all drown or are burnt to death.

You know you will cause a community and an environmental disaster due to your toxic waste being virtually untreated and dumped 'anywhere'.you don't care about.

You obviously care more for the company profit than you do for your childrens and grandchildrens future wellbeing.

Hopefully I will die peacefully of natural causes before you, monsanto, bp, shell, et al, murder me with your relentless rape and destuction of our home. THEONLY ONE WE HAVE.

I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Elliot Comunale

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Janell Copello

Subject: Reject Max Midstream's Air Permit!

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Sincerely,

**Subject:** Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)

To Whom It May Concern:

Will you please investigate potential impacts of the Max Midstream project in the Matagorda & Lavaca Bays? Our family is most appalled by the company's blatant disregard for the environment the community, Is it true that TCEQ expedited this permit application? Who examines the many elements of this project that deserve close scrutiny? What is the track record of Max Midstream even operating a facility as proposed?

Why would you permit & allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide & volatile organic compounds at levels that will harm the nearby community? Who can explain to us why Max Midstream claimed in its permit application it doesn't need to follow the best available pollution control technology? Did you approve such? A major industrial facility with capacity to emit large quantities of air pollutants.? No review? To allow this permit to proceed without the most stringent pollution controls & monitoring would be a monumental error on the part of TCEQ.

Will you at least hold a public meeting to review this permit more closely? Where is the contested case hearing which allows independent administrative law judges to review the facts of this matter?

Who is appropriate staff to talk with about this concern?

Regards,  
Cathy Courtney

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Susan Cox

**To:** CHIEFCLK <chiefclk@tceq.texas.gov>  
**Subject:** Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)

To Whom It May Concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I formally request a public meeting to review this permit more closely. I also request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter.

I look forward to your response.

Regards,  
Jacqui Cross

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Marie Curtis

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

We are deeply concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have we been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, we care greatly that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

We comment today because we believe that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

We appreciate TCEQ granting a public meeting to review this permit more closely and request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

We look forward to your response.

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Susan Davenport

Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Regina DeFalco Lippert

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Stephen Diamond  
8 McCurdy Rd  
Old Lyme, CT 06371

**Subject:** Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)

To Whom It May Concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I formally request a public meeting to review this permit more closely. I also request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter.

I look forward to your response.

Regards,  
Satyajeet Dodia

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. I have been following this story and continue to be appalled by the company's blatant disregard for the environment and the community. I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely. I request a contested case hearing in this matter to allow independent administrative law judges to review the facts. As TCEQ previously noted, there is significant public interest in this permit and the agency must give this permit close scrutiny.

Thank you.

Sincerely,  
Kathleen Doyle

Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

I look forward to your response.

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Brenda Eckberg

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Mark Elman

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Elaine Eudy

Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Chanda Farley

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am VERY CONCERNED ABOUT THE OVERALL IMPACT OF THE Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be APPALLED BY THE COMPANY'S BLATANT GREEDY DISREGARD FOR THE ENVIRONMENT AND THE COMMUNITY, I am also deeply concerned that TCEQ EXPEDITED THIS PERMIT application when there are so many elements of this project THAT DESERVE CLOSER SCRUTINY, INCLUDING the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit WOULD ALLOW Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has CLAIMED in its permit application IT DOESN'T NEED TO FOLLOW the best available pollution control technology, even though this would be a major industrial facility with the capacity TO EMIT LARGE QUANTITIES OF AIR POLLUTANT. To ALLOW THIS PERMIT TO PROCEED WITHOUT the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I REQUEST A COINTESTED CASE HEARING in this matter TO ALLOW independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and THE AGENCY MUST GIVE THIS PERMIT CLOSE SCRUTINY.

I look forward to your response.

Subject: Reject Max Midstream's Air Permit!

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Let's not continue to turn Texas into a toxic waste dump. All the drilling and fracking in West Texas is already coming back to haunt the current landowners.

Sincerely,

L. Fielder

**Subject:** Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)

To Whom It May Concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

I look forward to your response.

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Kim Forrest

Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
LG aBroad Franklin

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

The Max Midstream project should never be permitted because of the company's blatant disregard for the environment and the community. Why did TCEQ expedite this permit application when there are so many elements of this project that deserve closer scrutiny? Max Midstream possesses no record whatsoever in operating a facility like this.

This air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Maybe YOU want to breathe it? No one else does.

The company has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

TCEQ has necessarily granted a public meeting to review this permit more closely. I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.

We can smell the whole thing out here in California, and they haven't even started polluting yet. I look forward to your response.

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Anjelina Galbadores  
2216 E. Donner Ave

**To:** CHIEFCLK <chiefclk@tceq.texas.gov>  
**Subject:** Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)

To Whom It May Concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I formally request a public meeting to review this permit more closely. I also request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter.

I look forward to your response.

Regards,  
Purly Gates  
598 Lame Hoss Ln  
Driftwood, TX 78619.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Deborah Gibbs

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am concerned about the IMPACT of the Max Midstream project in the Matagorda and Lavaca Bays. I am appalled by the company's blatant disregard for the environment and the community. I am also concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the lack of any track record Max Midstream possesses in operating a facility like this.

This comment is submitted because the air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will be toxic to the people of nearby business and residences. Max Midstream has claimed in its permit application it does NOT need to comply with the best available pollution control technology, even though it would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

It is appropriate that TCEQ granting a public meeting to review this permit more closely. I ask that a contested case hearing in this matter to allow independent administrative law judges to review the facts. As TCEQ previously noted, there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
William Gies

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

- I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Stephen Gliva

To: CHIEFCLK <chiefclk@tceq.texas.gov>  
Subject: Reject Max Midstream's Air Permit!

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Sincerely,

Mark Goodman

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

AS two caring people, my husband and I are writing today because we are concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have we been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, we are also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

We are submitting this comment today because we are concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

WE appreciate TCEQ granting a public meeting to review this permit more closely and we request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

FOR THE HEALTH AND WELL-BEING OF ALL CURRENT AND FUTURE GENERATIONS, WILDLIFE AND THE ENVIRONMENT, protect Gulf Coast communities from Toxic Pollution. THIS IS THE RIGHT, FAIR, JUST, HUMANE AND HEALTHY ACTION TO TAKE!!!!

WE look forward to your response.

Sincerely,  
Dr. Mary Ann and Frank Graffagnino

To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I formally request a public meeting to review this permit more closely. I also request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter.

I look forward to your response.

Regards,  
Sarah Granberry

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Luciano graniello

Subject: Reject Max Midstream's Air Permit!

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Sincerely,

Michael Gray

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Probyn Gregory

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I wish to remind you that Texas isn't the only state on the Gulf. What you do there on the Gulf can affect the entire water body, marine life, and air quality. TCEQ expedited the permit application for the Max Midstream project in the Matagorda and Lavaca Bay. when the project requires a much more detailed environmental assessment. Dredging a mercury-laden Superfund site in Matagorda Bay and building a massive crude oil export facility can have negative impacts well beyond the siting area. And obviously the impacts of any project related to continuing fossil fuels affects everyone. including the complete lack of any track record Max Midstream possesses in operating a facility like this.

Max Midstream claimed in its permit application there is no need to follow the best available pollution control technology, even though this would be a major industrial facility. What alternate universe are they living in? Close to 30 oil and gas export projects are planned along the Gulf Coast, and the cumulative impacts must be considered.

TCEQ is granting a public meeting to review this permit more closely. What is needed is a comprehensive environmental impact statement that evaluates not only local but regional impacts and includes the combined effects of other existing and planned fossil fuel projects. These projects won't exist in a bubble, isolated from the rest of the region, country and planet.

I look forward to your response.

Sincerely,  
Cheryl Gross

Subject: Reject Max Midstream's Air Permit!

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community.

Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

This company wants to dredge up a Superfund site that is contaminated with mercury, thereby dispersing the mercury into the ocean life and contaminating the bay. This mercury contamination would destroy the fishing communities who make a living alongside the bay and also the bay ecosystem.

The oil industry must be shut down. The climate crisis must be responded to by rapidly leaving fossil fuel-based companies and stopping methane and CO2 being emitted into the atmosphere. This crude oil export facility is NOT needed by Texas or the USA.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Sincerely,

Felicito Guerrero Jr.

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Ronald Gulla

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Alan Haggard

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Leslie Harper

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Jo Harvey

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Nancy Heck  
822 Speed St  
Santa Maria, CA 93454

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
William Herbert

To Whom It May Concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

I look forward to your response.
