I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
regula hess

This area also is home to Whooping Cranes in the winter that are Federally protected birds that rely on the habitat like blue crabs, clams, and other animal foods, along with some plant material such as wolfberry, cranberry, acorns, cordgrass, marsh onions, and prairie lily. I know this first hand, as I worked with these animals through Earthwatch.

I look forward to your response.

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am very worried about all the negative consequences which will follow on from the Max Midstream project in the Matagorda and Lavaca Bays. I have been following this story. This company's blatant disregard for the environment and the neighboring community is infuriating. I am upset that TCEQ has expedited this permit application despite there being so many elements of this project that require closer scrutiny. Among these are the complete lack of any track record of Max Midstream operating any facility like the one proposed.

I am concerned that this air permit will allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels harmful to the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to use the best available pollution control technology... I read that and I thought I had misread it. But no. Even though not using the latest pollution technology a major industrial facility with the capacity to emit large quantities of air pollutants is insane. It risks the public health and the environment simply to add a few cents more to the corporation's profits. Allowing this permit to proceed without the most stringent pollution controls and monitoring is a huge mistake--even immoral on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely. In addition, I request a contested case hearing in this matter to allow independent administrative law judges to review the facts..

As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit much closer scrutiny.

I look forward to your response.

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Angela Hoehne

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am a fourth generation Texas whose people live on the Gulf. I know firsthand the impacts of air pollution from the oil and gas industry. My mother, aunt and uncle lived with my grandparents who were teachers not far from the industrial sector and all had childhood asthma. My mother lost her second child because of lung problems. While I was in utero, she had trouble breathing from her proximity to dirty air from the fossil fuels industry near Galveston. She had to take a medication that also got into my bloodstream. My grandmother taught high school near the refineries and died young in her 50's of cancer. My mother and my sister now use inhalers.

I am deeply concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays and on the health of the people who live and work there.

Not only have I been following this story and traveling to be with them, I continue to be appalled by the company's blatant disregard for the environment and the community. I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

To Whom It May Concern:

As a fifth-generation coastal resident, I still visit the Port Lavaca area and enjoy the unparalleled beauty. It's so important to save this sensitive ecosystem for the wildlife and the people. Dredging the bay would not only kill the oyster beds but also the seagrasses. It would stir up toxic mercury that would get into the smallest fish and bioaccumulate in the larger fish that are a source of food.

The air in the region would be polluted with toxic air pollution emitted from the loading process and even escaping from the tanks. That would be harmful for the lungs, respiratory systems, hearts and brains and lead to cancer, heart disease, stroke, and other diseases.

If this oil export terminal were built and the oil burnt here or overseas, it would create climate havoc and harm the coastal communities that are experiencing strengthened storms, flooding with the associated toxic spills, and sea level rise.

Its time to tell Todd Edwards and Azar Cola, absolutely not. Do not permit this facility.

Its time to transition to just and healthy jobs for all and not to ruin Lavaca Bay.

Subject: Reject Max Midstream's Air Permit!

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Sincerely,

Janet Hood

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Pat Huey

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Andrew Jackson  
14131 Bishop Bend Ln  
Houston, TX 77047

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am alarmed about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. I'm submitting this comment because I'm sick and tired of people getting sick and the places where they live being poisoned in order for some irresponsible company or another to make a profit. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. This arrogance of this claim and the clear lack of regard for human life and health it exhibits is appalling. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ and would make TCEQ complicit in every bit of damage and every single health problem that this Max Midstream causes. People should be able to depend on regulatory agencies to protect them, which means denying permits to any company whose activities would threaten their health and well being.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Karen Jacques

**Subject:** Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)

To Whom It May Concern:

Saying I am concerned about the impacts of the Max Midstream project on the surrounding area and in Matagorda and Lavaca Bays is an understatement.

Since Max Midstream is a new company that has never operated the kind of facility for which it has sought permits, the TCEQ should procede with greater scrutiny instead of expediting the permit application.

I don't trust that Max Midstream has any concern for the environment or for the community, which is rightly skeptical given its history with other industrial facilities.

An air permit for the Max Midstream project would allow emissions of toxic pollutants at levels that would be deleterious to the nearby community. This would be a major industrial facility and should utilize the best available pollution technology. If not, the message is basically that people's health isn't all that important, or at least not as important as the company's profits. We are talking about real people with real lungs that are necessary for life! The TCEQ would be blatantly disregarding its mission if it allows this permit to proceed without the most stringent pollution controls and monitoring.

Please hold a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter.

The public interest in this permit is bringing attention to the TCEQ; people are looking to the agency to do its job for the people and the environment by giving this permit the close scrutiny that it needs.

I look forward to your response.

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Bridgette Jessen

Subject: Reject Max Midstream's Air Permit!

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Sincerely,

Virginia Jevric

Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

The petrochemical industry continues to pollute the environment, contribute to global warming, & collect government subsidies.

I look forward to your response.

Sincerely,  
Stephen a Johnson

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Vicki Johnson

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Melissa K

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Elana Katz

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
karen kindel

Subject: Reject Max Midstream's Air Permit!

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Sincerely,

Harry Klaff

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Hunter Klapperich

As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

This, like numerous other issues (climate change, gun safety, immigration reform, prison reform, education reform, short-term lending regulation, healthcare reform, banking regulation, opioid regulation) remains a vexing problem primarily due to corporations' ability to curry favor with elected officials. The corrupting influence of money in our political system is undermining our democratic traditions and discouraging Americans from voting and/or running for office. This ominous development may well end our experiment in representative democracy unless we alter this decades-long trend. For the sake of the republic, we must amend the US Constitution to state that corporations are not people (and do not have constitutional rights) and money is not speech (and thus can be regulated by state and/or federal campaign finance laws). Short of accomplishing this, no other reform of significance will be achieved. The moneyed interests will turn any reform to their benefit, often at the expense of the nation as a whole.

I look forward to your response.

Sincerely,  
James Klein

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am extremely concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Joann Koch

Subject: Reject Max Midstream's Air Permit!

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Sincerely,

Davorin Kozul

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Marion Kraus

Subject: Reject Max Midstream's Air Permit!

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

As a mother and a grandmother, I am very concerned for the health and viability of the planet our children and future generations will inherit. We have a duty to our communities, families and most importantly, children to ensure their safety and well being through environmentally sound and sustainable policies, including clean air, water, addressing climate change, etc. That duty will always be more important than politics or profit.

So I am contacting you in grave concern regarding the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Sincerely,

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Pamela Lacey

**Subject:** Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)

To Whom It May Concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

I look forward to your response.

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Joseph Lawson

To Whom It May Concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

I look forward to your response.

To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

**To:** CHIEFCLK <chiefclk@tceq.texas.gov>  
**Subject:** Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)

To Whom It May Concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

I look forward to your response.

Regards,  
Bob Lindsey

**Subject:** Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)

To Whom It May Concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as for carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I formally request a public meeting to review this permit more closely. I also request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter.

I look forward to your response.

P.O. Box 13087 Austin, Texas 78711-3087 Subject: Protect Gulf Coast communities from  
Toxic Pollution. Reject Max Midstream's Permit -- TCEQ Proposed Air Quality Permit  
Number 162941 (Max Midstream Texas LLC's Seahawk Crude Condensate Terminal) To

Texas Commission on Environmental Quality Chairman Jon Niermann and Commissioners Emily Lindley and Bobby Janecka: I am very concerned about the overall impact of Max Midstream's Seahawk Crude Condensate Terminal project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that the Texas Commission on Environmental Quality (TCEQ) expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this. "The ultimate test of a moral society is the kind of world that it leaves to its children." -- Dietrich Bonhoeffer I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of the TCEQ. "As we peer into society's future, we—you and I, and our government—must avoid the impulse to live only for today, plundering for our own ease and convenience the precious resources of tomorrow. We cannot mortgage the material assets of our grandchildren without risking the loss also of their political and spiritual heritage. We want democracy to survive for all generations to come, not to become the insolvent phantom of tomorrow." -- Dwight D. Eisenhower I appreciate the TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As the TCEQ previously noted, there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary to ensure that communities and environment are protected from Max Midstream. "A thing is right when it tends to preserve the integrity, stability, and beauty of the biotic community. It is wrong when it tends otherwise." -- Aldo Leopold Thank you for your consideration of my comments. Please do NOT add my name to your mailing list. I will learn about future developments on this issue from other sources. Sincerely, Christopher Lish San Rafael, CA

To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Michael Lombardi

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

To: CHIEFCLK <chiefclk@tceq.texas.gov>  
Subject: Reject Max Midstream's Air Permit!

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

I am writing today because I am opposed to the Max Midstream project in the Matagorda and Lavaca Bays. I am opposed because of Max Midstream's blatant disregard for the environment and the community, and also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the absence of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be an ill-advised dangerous error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted, there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Sincerely,

Gilberto Lopez

Subject: Reject Max Midstream's Air Permit!

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Sincerely,

Steven Lucas

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I recall meeting several friendly TCEQ folks while working on Hurricane Ike response some years ago. Having spent some time along the Texas Gulf Coast and learning of its history and the environmental problems already left behind by the fossil fuel industry I wonder at the prospect of adding more of this misery.

I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Michelle Macy

Subject: Reject Max Midstream's Air Permit!

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

BACT is not negotiable. We need the best. There is no trust for Max Mid-stream, only verify. Do the job that needs to be done TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Sincerely,

Brandt Mannchen

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
George manolis

**Subject:** Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)

To Whom It May Concern:

Wait, we are sacrificing our environment for future generations so oil companies, who pay zero taxes, can make more profit, that they invest overseas, selling to overseas entities. So this has zero benefits the nation.

I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

I look forward to your response.

Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Toni Mayer

**Subject:** Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)

To Whom It May Concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

I look forward to your response.

**Subject:** Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)

To Whom It May Concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

I look forward to your response.

Regards,  
Alex McDonald

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

Do we really need to let more people pollute the planet, destroy our health, and even kill us, all for private profit?

I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. I am appalled by the company's blatant disregard for the environment and the community.

I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community.

Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants.

Why not? Our babies' and children's lungs, and our lungs, can't give Max Midstream an exemption.

To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ's granting a public meeting to review this permit more closely, and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted, there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Gail McMullen

Subject: Reject Max Midstream's Air Permit!

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Sincerely,

Kathryn Melton

**Subject:** Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)

To Whom It May Concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

I look forward to your response.

Regards,

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I guess the British are coming to pollute Texas! The British are coming, the British are coming for Texas as if your debacle grid and no lights on during a cold snap and whose responsible for that. It is your governor Abbott like the comedian of Abbott and Costello. TCEQ do your damn job and reject/deny this permit to pollute your great state. Stop the British billionaire Max Midstream oil port which will pollute the Gulf like the British Petroleum (BP) did way back when. Have you not learned from the past???

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Jeanine Mielke

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. Subject: Reject Max Midstream's Air Permit!

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Sincerely,

Pamela Miller

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Janis Millu

Texas Commission on Environmental Quality (TCEQ)

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Thank you,  
Jan Modjeski

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Celine Montijo

Subject: Reject Max Midstream's Air Permit!

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Sincerely,

Sybil Morgan

Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Paul Moss

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Dara Murray

**Subject:** Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)

To Whom It May Concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

I look forward to your response.

Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Eleanor Navarro

**Subject:** Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)

To Whom It May Concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

I look forward to your response.

Subject: No air permit for Max Midstream

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

Those of us who live on the Texas gulf coast already know it is dirty enough. Like every other natural place, it is a delicate ecosystem that is already pushed to breaking.

Not only do I believe there should be no new oil and gas projects, especially near bodies of water, this project in particular is an environmental disaster.

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Sincerely,

Susan Nichols

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing due to the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. The company has shown blatant disregard for the environment and the community, and TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the lack of any track record Max Midstream possesses in operating a facility like this.

This air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a huge error on the part of TCEQ.

TCEQ has granted a public meeting to review this permit more closely and a contested case hearing in this matter must happen to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

Sincerely,  
Jennifer Nitz

To Whom It May Concern:

Aside from the standard form letter below, I want you to know I am a real person (see address below) and am in opposition to this dredging. Texas waters have been ravaged by numerous environmental disasters. Please don't stir up harmful toxins that our families will ingest as seafood. Our seafood industry is sustainable, oil will run out and be gone forever.

Thank you,

John R. Nixon

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
susan nowicki

Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Lewis Okun

We cannot allow polluters to do whatever they want to make a buck!!! I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Lorrie Oshatz

Subject: Reject Max Midstream's Air Permit!

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Sincerely,

Joyce Overton

**Subject:** Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)

To Whom It May Concern:

I write today due to concerns about impacts of the Max Midstream project in Matagorda Bay and in Lavaca Bay.

This is a TERRIBLE idea. We are completely appalled by the unconscionable disregard for our shared environment, the business community, children growing up in the area, and the people of Texas and of Earth - a planet apparently already struggling mightily to sustain us.

We are DISAPPOINTED in TCEQ for expediting such a permit application when there are clearly serious issues around the project that need to be better scrutinized!

We are troubled that TCEQ would consider allowing the air to be made more toxic by Max Midstream, allowing pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and vocs to poison the area.

The fact that Max Midstream has declared in its application that it shouldn't follow the best available pollution control technology is even more outrageous, IRRESPONSIBLE, and downright insane.

We request a contested case hearing concerning this, to bring in independent administrative law judges to examine the details and issues in this matter. As TCEQ noted, there is widespread public interest in this permit.

Thank you for your attention to this matter.

**Subject:** Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)

To Whom It May Concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

I look forward to your response.

Regards,

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
A Patterson

To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

If the Max Midstream project goes ahead, it's a green light for other companies along other coastline areas to do the same. These each would have potential severe impact on the coastal communities and their populations.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

IT IS UNCONSCIONABLE TO PUT PROFITS OVER HEALTH! It is important to ask the hard questions to seek out truth-telling. We need truth-telling. Third parties can get at truth-telling by doing independent fact-finding. It seems like this company MAX MIDSTREAM does seek profit, but minimizes environmental effects of what it proposes to do. I recommend either NOT allowing Max Midstream's permit or requiring changes to it so that there will be NO harm to nearby communities

Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

I look forward to your response.

**Subject:** Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)

To Whom It May Concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I formally request a public meeting to review this permit more closely. I also request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter.

I look forward to your response.

Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Richard Peterson

Texas is blessed with the beautiful Gulf of Mexico that has already undergone environmental assaults from British billionaires. Let's take care of the many small businesses whose livelihoods depend on the bounty provided by the Gulf waters. A bounty of food for Texans, obtained by Texans in a sustainable manner. Our children deserve to breathe clean air and drink clean water. Their bright future is not for sale in exchange for making a British billionaire even richer. Sincerely, A Corpus Christi native.

To Whom It May Concern:

Please heed our words! I write today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays.

I am truly taken back by this company's disregard for the environment and the community.

I am also deeply troubled that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this!

Of particular concern is that this permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community.

AND Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology! This undertaking would require the most stringent pollution controls and monitoring!

I do appreciate the granting of a public hearing on the matter, and request a contested case hearing allow independent administrative law judges to review the facts. As TCEQ previously noted, there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

I look forward to your response.

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,

Subject: Reject Max Midstream's Air Permit!

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Sincerely,

John Porter

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Lynne Preston

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. Subject: Reject Max Midstream's Air Permit!

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Sincerely,

Reagan Ralston

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am extremely concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply worried that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this, and that they're not a US company.

Before it's even built, this proposed facility will be polluting the environment with toxic mercury & other chemicals from the Superfund site that they want to dredge. This must not proceed.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Jeff Reagan

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. **RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Jeff Reynolds

Subject: Reject Max Midstream's Air Permit!

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Sincerely,

Terry Richter

**To:** CHIEFCLK <chiefclk@tceq.texas.gov>  
**Subject:** Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)

To Whom It May Concern:

That the Texas Commission on Environmental Quality would even consider permitting a non-US citizen/billionaire to build Max Midstream, a facility that would add more pollution to that already being suffered by US Citizens living in the area. This bay has been abused, as have been its citizens and their small fishing and shrimping businesses for decades. Besides that, tankers will need a deep channel to navigate the Bay for the purpose of exporting the products of this proposed facility. That will disturb heavy metals, including mercury that have settled there during the operation of aluminum plants decades ago. It is common knowledge that disturbing the sediment will result in massive pollution of the Bay and in destructive impacts to American businesses still operating in the area. To allow a foreigner to cause such devastation to American waters and disrespect the rights of US citizens to operate their businesses is a prime example of betrayal by our Government of US Citizens. To allow a foreign entity to pollute the air and endanger the public health of US citizens is a betrayal of the very mission of the TCEQ.

Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ. Max Midstream is going to be an other BP/British disaster.

I formally request a public meeting to review this permit more closely. I also request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter.

I look forward to your response.

Regards,

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Amy Roberts

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Soretta Rodack

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. **Subject:** Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)

To Whom It May Concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

I look forward to your response.

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. I am especially concerned that Max Midstream plans to build a massive export terminal on what is a former Superfund site thereby potentially exposing yet again local residents to the toxic effects of life-threatening pollutants. It is especially noteworthy that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,

**Subject:** Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)

To Whom It May Concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays - which, given the nature of air and wind, has implications across Texas and beyond. I am appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ - the "Q" is for "quality" - expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this. This permit is both abusive and dangerous!

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

I look forward to your response.

To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ. And I am very concerned about what you will do with the Mercury laden spoils you intend to dredge. Will this be placed in a lead proof, water tight container so it cannot pollute local waters when the next hurricane and surge hits that part of the Texas coast. Clearly the State Government cares little. I think the residents and fishermen would care, as that is a major spawning area. All Texas needs is another pollution source on its already overburdened coast line. And is any agency involved in water pollution from dredging? When all the State cares about in Tax money, one is forced to wonder.

While I am not a resident of Texas, I was born and raised in Galveston, Texas, and remember well the tar balls on the beach, the stench of the north wind from Texas City in the fall and winter. Nobody seemed to care about that then. I would think someone might now.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

To Whom It May Concern:

I am concerned about the impacts of the Max Midstream project in the Matagorda and Lavaca Bays. I am concerned there may be a disregard for both the environment and the community. I am also concerned that TCEQ expedited this permit application when there may be elements of this project that deserve closer scrutiny.

Does Max Midstream even have a track record operating a facility like this?

I am concerned that this air permit would allow Max Midstream to emit toxic pollutants like carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Did Max Midstream also claim its permit application doesn't need the best pollution control technology for handling large quantities of air pollutants? Dredging in a mercury laden superfund site just sounds like a bad idea. Has there been an environmental impact study? I am concerned that allowing this permit to proceed in an expedited manner could cause immense damage.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
M S

To: CHIEFCLK <chiefclk@tceq.texas.gov>  
Subject: Reject Max Midstream's Air Permit!

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Sincerely,

Maureen Saval

Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Diana Saxon

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

**COMMENTS:** Re: Comments on Max Midstream Texas LLC, CN 605726959, Permit No. 162941 June 4, 2021 Office of the Chief Clerk - MC 105 TCEQ P.O. Box 13087 Austin, TX 78711-3087 Dear Chief Clerk of TCEQ: Texas Campaign for the Environment Fund (TCE) is submitting these comments on Max Midstream Texas LLC, CN605726959. TCE is extremely

concerned about this air pollution permit and formally requests a public meeting on this permit, as well as a Contested Case Hearing. Air pollution from facilities such as these could contain high levels of VOCs, Dioxins, PCBs, and greenhouse gases that are harmful to human and environmental health. A similar facility in San Patricio County, Moda Ingleside LLC, is generating complaints from air pollution and has had such an impact that at least one family sold their home because of the air pollution. If permitted, Max Midstream should be required to use the Best Available Control Technology. This would set a terrible precedent and should not be set under any circumstances. These toxins and climate changing gases can cause acute and chronic problems for people and other species. This area already has other polluting industries that are affecting the fishing industry and these emissions could add to the deterioration of that local industry. The impacts of climate change are already being felt and it is past time that the TCEQ treated them as serious pollutants. The increasingly extreme weather events such as droughts, freezes, hurricanes and flooding are affecting not only Calhoun County where this facility is proposed but also Texans in virtually every corner of our state. Sincerely, Robin Schneider  
Executive Director

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Douglas Schneller

Texas Commission on Environmental Quality (TCEQ)

The Gulf of Mexico from Houston to Corpus Christi is already very polluted. We do not need more Gulf pollution, dirty export terminals, and plastic plants. I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Thank you,  
D Schoech

Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Jennifer Scott

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Stephanie Selznick

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Vivian Shayne

**Subject:** Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)

To Whom It May Concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I formally request a public meeting to review this permit more closely. I also request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter.

I look forward to your response.

To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

To: CHIEFCLK <chiefclk@tceq.texas.gov>  
Subject: Reject Max Midstream's Air Permit!

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

I am writing today because I am concerned about the overall IMPACTS of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be APPALLED by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer SCRUTINY, including the complete LACK of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit WOULD allow Max Midstream to EMIT TOXIC POLLUTANTS such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that WILL HARM the nearby community. Furthermore, Max Midstream has claimed in its permit application it DOES NOT need to follow the best available pollution control technology, even though this WOULD be a major industrial facility with the capacity to emit LARGE quantities of air pollutants. To allow this permit to proceed WITHOUT the most stringent pollution controls and monitoring WOULD be a monumental ERROR on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I REQUEST a contested case hearing in this matter to allow independent administrative law judges to review the FACTS of this matter. As TCEQ previously noted there is SIGNIFICANT public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Sincerely,

Lisa Silguero

To Whom It May Concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant DISREGARD for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer SCRUTINY, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit TOXIC POLLUTANTS such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that WILL HARM the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to EMIT LARGE QUANTITIES of air pollutants. To allow this permit to proceed without the most STRINGENT pollution controls and monitoring would be a monumental ERROR on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit MORE closely and I request a contested case hearing in this matter to ALLOW independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is SIGNIFICANT public interest in this permit and I hope the agency gives this permit the CLOSE scrutiny necessary.

I look forward to your response.

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Debbie Slack

Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Kim Smith

Subject: Reject Max Midstream's Air Permit!

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Sincerely,

Leslie Smith

Subject: Reject Max Midstream's Air Permit!

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Sincerely,

Katharine Sommerfield

To Whom It May Concern:

I am writing today to request a contested case hearing to review the permit application by Max Midstream for their project in the Matagorda and Lavaca Bays.

I am deeply concerned that TCEQ expedited this permit application. There are so many elements of this project that deserve closer scrutiny, including the lack of provable experience Max Midstream has in operating a facility like this.

Specifically, I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community and our precious Texas coast.

Even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants, Max Midstream's permit application claims it doesn't need to follow the best available pollution control technology. . To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I urge you to hold a hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted, there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

I look forward to your response.

Subject: Max Midstream does Not merit requested Air Permit

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

Max Midstream has demonstrated poor environmental stewardship behavior in past activities. If allowed, it will add significantly to pollution on our Matagorda Bay. Therefore, I am writing today to express my concerns about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Subject: Reject Max Midstream's Air Permit!

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Sincerely,

George Staff

Texas Commission on Environmental Quality (TCEQ)

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Thank you,  
Joanie Steinhaus

**COMMENTS:** Turtle Island Restoration Network (TIRN) respectfully submits the following comments on the Max Midstream Texas LLC, CN605726959. TCEQ must fully assess the potential harm to wildlife, critical habitat, and human health from the weakening the air quality monitoring and reporting at marine fossil fuel facilities permits. The VOCs, Dioxins, PCBs, and greenhouse gasses that these facilities emit are hazardous to wildlife and humans.

Greenhouse gases contribute to global warming, ocean acidification, and climate disasters such as hurricanes that have devastated the Texas coast. For endangered sea turtles in particular, nests and the survival of sea turtles is heavily impacted by global warming that is enhanced by greenhouse gas emissions. Studies have found that warmer temperatures and sea level rise from global warming may decrease hatchling success, available nesting habitats, and skew sex ratios. Another study found that warmer oceans impact critically endangered Kemp's ridley sea turtles by leading to more cold-stunning and subsequent juvenile mortality. In addition, VOCs and dioxins are known to irritate eye, nose, and lung health. Not only is this damaging to human health, but it can be damaging to wildlife such as endangered sea turtles, birds, fish, and marine mammals. Also, dissolved dioxins and PCBs has been an issue in Texas waters contaminating fish populations. SO<sub>2</sub> and NO<sub>x</sub> are known to lead to acid rain which is lethal to plants and animals alike. Acid rain is known to have a disproportionate impact on nearshore environments as it lowers the pH of water and inhibits species to build healthy calcium carbonate shells, leaches aluminum from sediments, and removes minerals from sediments which plants need to grow. We are concerned that Max Midstream has claimed in its permit application that it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. Lavaca Bay and the surrounding community are already subjected to massive loads of environmental toxins as it endures the pollutants from the Formosa Plastics facility and continues to deal with the mercury pollution from the Alcoa facility's superfund site. Overloading the system even further could wreak irreversible damage on the ecosystem's and community's health. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ. Lavaca and Matagorda Bays' beautiful coastlines supports a vibrant eco-tourism and recreational angling and an already struggling commercial fishing industry that would all be put in jeopardy from increased air pollution and releases of VOCs, Dioxins, PCBs, and greenhouse gasses. We ask TCEQ to strengthen, not weaken, important air quality monitoring and reporting requirements needed to protect the environment and public health. It is vital that the public be able to review and comment on these standards so that the people can protect the health of their families, communities, and environment. We formally request a public meeting to review this permit more closely. \*\*We attempted to submit these comments to the system yesterday afternoon but it would not accept our comments yesterday saying that there was an error. This reinforces the need for a public meeting.\*\* Thank you for your consideration of these comments. **Re: Comments on Max Midstream Texas LLC, CN 605726959, Permit No. 162941**

Office of the Chief Clerk - MC 105  
TCEQ  
P.O. Box 13087  
Austin, TX 78711-3087

Dear Office of the Chief Clerk of TCEQ:

Turtle Island Restoration Network (TIRN) respectfully submits the following comments on the Max Midstream Texas LLC, CN605726959.

TCEQ must fully assess the potential harm to wildlife, critical habitat, and human health from the weakening the air quality monitoring and reporting at marine fossil fuel facilities permits. The VOCs, Dioxins, PCBs, and greenhouse gasses that these facilities emit are hazardous to wildlife and humans.

- I. Greenhouse gases contribute to global warming, ocean acidification, and climate disasters such as hurricanes that have devastated the Texas coast. For endangered sea turtles in particular, nests and the survival of sea turtles is heavily impacted by global warming that is enhanced by greenhouse gas emissions. Studies have found that warmer temperatures and sea level rise from global warming may decrease hatchling success, available nesting habitats, and skew sex ratios. Another study found that warmer oceans impact critically endangered Kemp's ridley sea turtles by leading to more cold-stunning and subsequent juvenile mortality.
- II. In addition, VOCs and dioxins are known to irritate eye, nose, and lung health. Not only is this damaging to human health, but it can be damaging to wildlife such as endangered sea turtles, birds, fish, and marine mammals. Also, dissolved dioxins and PCBs has been an issue in Texas waters contaminating fish populations.
- III. SO<sub>2</sub> and NO<sub>x</sub> are known to lead to acid rain which is lethal to plants and animals alike. Acid rain is known to have a disproportionate impact on nearshore environments<sup>1</sup> as it lowers the pH of water and inhibits species to build healthy

---

<sup>1</sup> Woods Hole Oceanographic Institute <https://www.whoi.edu/oceanus/feature/the-oceans-feel-impacts-from-acid-rain/>

calcium carbonate shells, leaches aluminum from sediments, and removes minerals from sediments which plants need to grow.<sup>2</sup>

We are concerned that Max Midstream has claimed in its permit application that it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. Lavaca Bay and the surrounding community are already subjected to massive loads of environmental toxins as it endures the pollutants from the Formosa Plastics facility and continues to deal with the mercury pollution from the Alcoa facility's superfund site. Overloading the system even further could wreak irreversible damage on the ecosystem's and community's health. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

Lavaca and Matagorda Bays' beautiful coastlines supports a vibrant eco-tourism and recreational angling and an already struggling commercial fishing industry that would all be put in jeopardy from increased air pollution and releases of VOCs, Dioxins, PCBs, and greenhouse gasses. We ask TCEQ to strengthen, not weaken, important air quality monitoring and reporting requirements needed to protect the environment and public health.

It is vital that the public be able to review and comment on these standards so that the people can protect the health of their families, communities, and environment. We formally request a public meeting to review this permit more closely.

Thank you for your consideration of these comments.

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Lorenz Steiniger

**Subject:** Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)

To Whom It May Concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

I look forward to your response.

Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Felicia Sunderland

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Laura Pitt Taylor

Subject: Reject Max Midstream's Air Permit!

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Sincerely,

Jean Thomas

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,

To Whom It May Concern:

I am concerned about the harm of the Max Midstream project. As someone who recreates in places all across the Gulf, including Lavaca Bay, I could be personally impacted by this project.

I writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I formally request a public meeting to review this permit more closely. I also request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter.

I look forward to your response.

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
r tippens

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Iva Turato

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am alarmed by the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

This air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm communities across the region. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Vonda Vandaveer

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

For my grandchildren.

Subject: Reject Max Midstream's Air Permit!

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

We need to protect our ecosystems, especially vulnerable coastal wetlands. Recent reports of higher temperatures than normal, not only in the US, but in Europe as well are an indication that we beginning to experience the disastrous effects of climate change. Coastal areas, wetlands, and our coasts, becomes ever more urgent. Please oppose Max Midstream's Air Permit. Thank you.

Sincerely,

Subject: Protect the Lavaca and Matagorda Bays Communities

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

I am further concerned about the dredging in Matagorda Bay that would be required to bring this project to completion. The bottom of the bay has been heavily polluted by dumping of mercury and heavy metals. Dredging would stir up those toxins, releasing them once again into the bay waters. What a disaster!

Sincerely,

Shirley Vaughn

Subject: Reject Max Midstream's Air Permit!

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Sincerely,

Arturo Velasquez

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Julia Wade

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Hailey Wang

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I formally request a public meeting to review this permit more closely. I also request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter.

I look forward to your response.

Regards,  
Jessica Weaver

Subject: Do not approve Max Midstream's project on our coast.

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. I am appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Sincerely,

Ronnie Weiss

**Subject:** Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)

To Whom It May Concern:

I was a home owner in Aransas County for many years and loved the pristine area and fresh, abundant seafood available there and nearby. It is among the nicest parts of Texas and should be saved from wrongheaded projects like the Max Midstream.

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit.

Please consider the good lives and the livelihoods of the citizens who will be impacted by this heinous project. We must protect our fellow Texans and our planet.

As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

We were better at one time. Through the years, everything has been done quicker, easier, cheaper, at the cost of the environment. We need to think of ways to reverse this trend, & help the earth & thus everyone else in the long run.

Don't forget about cutting back our carbon footprint. (and all that entails, including reduce, refuse, reuse, recycle, compost—when you can safely, & living as simply as possible, cutting back on excess, downsizing, etc . . .).

I'm trying, but I think we could do more to encourage others around the world. Including setting a good example ourselves. I'm not sure Trump did the wrong thing. I was not in favor of the Paris Agreement for my own reasons, and I am a tree hugger. I also love this planet & all in it. but the nuclear option could blow it for all of us. (making it worse than it could ever get—because nuclear energy is very dangerous) I sometimes wonder about people who are pushing for the nuclear option. Do they just not know the past mishaps? do they have too much trust in humanity? do they not think of terrorism or other such deeds? Not to mention natural disasters?, etc . . . I think that was a mistake. It, nuclear energy, should not have been included in the answer to our problems. & I worry that this is buried in this Green New Deal as well.

Re a Climate Emergency, another problem is that Haste Makes Waste & many times in our urgency to do good we move too fast for our own good & the good of others. Someone may suffer as a result & there may be no quick remedies before much

suffering by many. So we need to take it slow by testing small areas first & then progressing, realizing that some things will not show up right away. But the first steps above could start earlier. And what about hybrids? Solar/Electric regular/ electric, etc . . ? They are a great way to start transitioning. Not to mention we all need to cut down on our energy consumption. Where is Carter? Can anyone help out in that matter? But in any case we need to realize that we may need to make changes for the best of all.

This is the best time to realize that all people, animals, beings/creatures, spirits, etc . . . dwell in the same space: Earth. We are the past, present, & future. We are all above, below, on and or in the earth. It is the home of us all & we all need each other whether we know it or not. We should make all plans keeping the future of all in mind. We are all connected, so what we do in one part of the world will eventually get to another.

& I hope you will join me in praying for the president & that he & his team will realize our wishes & understand they are for his benefit as well as the benefit for everyone else in the long run.

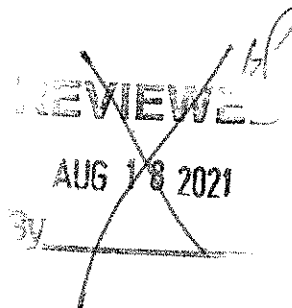

If you'd like, you could pass on my wishes to him as well.

I share a variety of perspectives. no matter who we are or where we came from, we can thank God that we are here & that we do have a lot to be thankful for. Maybe not as much as some. But a lot more than others. yes, there are times when I feel worse than others, that happens to all of us, no matter who we are. But thank God we are here. We can also agree to disagree on many issues. That's life. The whole point is that we are all here, thank God, & we all have life, & we all are together.

Happy Summer!

Stay safe & Take care & God Bless All . . .

Sincerely,

**Subject:** Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)

To Whom It May Concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

I look forward to your response.

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Mark Williams

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Lauren Winn-Dallmer

Subject: Reject Max Midstream's Air Permit!

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary and doesn't allow further wrecking of our Gulf coast.

Sincerely,

Frank Wissler

Subject: Reject Max Midstream's Air Permit!

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Sincerely,

Sandra Woodall

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

We must begin to assess the damage humans are doing to our small planet and its other inhabitants as well as the poorest among us. The destructive impact of the Max Midstream project in the Matagorda and Lavaca Bays is deeply disturbing. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

This air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am extremely concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve much closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. This is UNACCEPTABLE! Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error and dereliction of duty on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Guadalupe Yanez

Subject: Reject Max Midstream's Air Permit!

Dear TCEQ's Office of the Chief Clerk,

To whom it may concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter. As TCEQ previously noted there is significant public interest in this permit and I hope the agency gives this permit the close scrutiny necessary.

Sincerely,

Patricia Zavala

**RE: Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)**

Dear TCEQ,

I am writing today because I am concerned about the overall impact of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

I'm submitting this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide, and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I appreciate TCEQ granting a public meeting to review this permit more closely and I request a contested case hearing in this matter to allow independent administrative law judges to review the facts.. As TCEQ previously noted there is significant public interest in this permit and the agency must give this permit close scrutiny.

I look forward to your response.

Sincerely,  
Gretchen Zeiger-May

**Subject:** Re: TCEQ Permit No. 162941 (Max Midstream Air Pollution)

To Whom It May Concern:

I am writing today because I am concerned about the overall impacts of the Max Midstream project in the Matagorda and Lavaca Bays. Not only have I been following this story and continue to be appalled by the company's blatant disregard for the environment and the community, I am also deeply concerned that TCEQ expedited this permit application when there are so many elements of this project that deserve closer scrutiny, including the complete lack of any track record Max Midstream possesses in operating a facility like this.

In particular, I submit this comment today because I am concerned that this air permit would allow Max Midstream to emit toxic pollutants such as carbon monoxide, nitrogen oxide, hydrogen sulfide and volatile organic compounds at levels that will harm the nearby community. Furthermore, Max Midstream has claimed in its permit application it doesn't need to follow the best available pollution control technology, even though this would be a major industrial facility with the capacity to emit large quantities of air pollutants. To allow this permit to proceed without the most stringent pollution controls and monitoring would be a monumental error on the part of TCEQ.

I formally request a public meeting to review this permit more closely. I also request a contested case hearing in this matter to allow independent administrative law judges to review the facts of this matter.

I look forward to your response.
