COMMENTS: I am opposed to air quality permit 165848 and requesting a "public meeting." As a member of NORTH SAN GABRIEL ALLIANCE, I firmly believe that there is great risk of air and water pollution from the hazardous chemical processing plant under development by Exfluor Research Corporation on Williamson County Road 236. This pending Exfluor Research Corporation location is surrounded by 150+ family residences, including historical farms, ranches, and homes, water recreation areas, agricultural lands, and wildlife conservation areas. The North Fork of the San Gabriel

River runs through the area, and downstream to Lake Georgetown and Lake Granger, then into the Brazos River and on to the Gulf of Mexico. The City of Georgetown and the City of Round Rock obtain drinking water from Lake Georgetown. Toxic chemical pollution from such a facility could permanently affect people, homes, land, and agriculture nearby, as well as downstream in the river drainages. Such a facility should not be located anywhere in the area of the North Fork of the San Gabriel River. This rural area is primarily residential, agricultural, and widely used for recreation activities. This is not an industrial area. I call upon the Texas Commission on Environmental Quality (TCEQ) to RESCIND its preliminary decision and DENY the draft air quality permit for the announced Exfluor Research Corporation chemical manufacturing facility on County Road 236.

COMMENTS: I am against the proposed Exflur facility on CR 236 because of the anticipated release of harmful contaminants into the environment and the proximity to families and homes in the area. I have lived near the intersection of US 183 and TX 138 for 24 years and believe that the development of the Exflur facility does not belong in a rural area with limited infrastructure and emergency response. I'm also very perplexed that I had no idea that this facility was under development and review. Had I known about the proposed plant I would have been more proactive in

my protests against this development. This facility belongs in an industrial area with adequate access for both the facility and emergency response teams.

COMMENTS: I strongly oppose the construction of the Exflur Research Chemical Plant at 1100 County Road 236, Williamson County, Tx. (Permit #165848). If needed, I join my neighbors in the area requesting an in-person public meeting with TCEQ in the County Road 236 area to discuss our concerns and show you the nature of the area. This area is a rapidly growing residential community of single family homes and small ranches. We are all united in opposition to chemical production so close to the San Gabriel River and associated tributaries, as well as the negative effects to the

health of our residents, animals and environment. I request that TCEQ take action to protect the residents of this area and deny this permit for a use that is completely incompatible with the surrounding land use. Thank you for your consideration.

COMMENTS: The Exfluor permit must be denied. The area they propose to build this plant is soon to also be the site of a new Liberty Hill High School along with a new Elementary school. I'm sure TCEQ agrees it is paramount to protect children and families from these types of highly dangerous chemicals. I encourage TCEQ to confirm these details with the Liberty Hill ISD. In addition this area is fully residential. It is appalling that this company would even be granted a discharge permit here considering the high volume of well water usage.

COMMENTS: My family and I live in close proximity to where the proposed site will be built. We are about 5 miles downstream off the San Gabriel River. This not seem like the proper site for an industrial operation. There are massive developments going up off of CR 214, and this area is becoming a population center, not suitable to have a chemical

plant leaching chemicals into nearby water, ground and air. I have had asthma since a young age, and I worry about my boys (6 and 3 years old) growing up nearby a chemical facility. I call on TCEQ to rescind any permit to EXFLUOR RESEARCH.

My family and I live in close proximity to where the proposed site will be built. We are about 5 miles downstream off the San Gabriel River and Lackey creek. The creek runs right behind our property line, and a separate wet weather creek gives outlet to rain and run off. This does not seem like the proper site for an industrial operation. There is a cattle ranch in near proximity where I purchase beef for my family and I. I call for study of acidic rain prior to any further permit action. There are massive developments going up off of CR 214, and this area is becoming a population center, not suitable to have a chemical plant leaching chemicals into nearby water, ground and air. I have had asthma since a young age, and I worry about my boys (6 and 3 years old) growing up nearby a chemical facility. I call on TCEQ to rescind any permit to EXFLUOR RESEARCH in Williamson county and to further study the effects of acidic rain, and other harmful impacts of proposed EXFLUOR RESEARCH business activities.

COMMENTS: I am a property owner in the area (CR 204 in Williamson County), and we plan to build a house and move to our property within the next year. I am also a semi-retired engineer with a Ph.D. in Mechanical Engineering from UT Austin. In my view, chemical plants should not be allowed to discharge into streams that supply large and growing municipal water supplies. While the discharge can be "made safe" and monitored, assuming both are rigorously done, any accidents pose a good deal of danger to a large number of people. In addition, the damage done may be long lasting

and difficult to mitigate. For similar reasons, such industries should not be allowed to build immediately adjacent to already established residential areas. Logical locations for such industrial activities are in areas set aside for such activities. This more easily allows multiple operations to be monitored for compliance as well as providing adequate and rapid emergency response if necessary. Allowing such concerns to operate wherever they are able to acquire land spreads out the danger, thus devaluing large areas as opposed to keeping dangerous, albeit sometimes necessary, activities confined to locations predetermined by a well thought out growth plan. Respectfully submitted, Don T. Berry, Ph.D.

COMMENTS: Paste: 1 am opposed to air quality permit 165848 and requesting a public meeting. As a member of NORTH SAN GABRIEL ALLIANCE, I firmly believe that there is great risk of air and water pollution from the hazardous chemical processing plant under development by Exflur Research Corporation on Williamson County Road 236. This pending Exflur Research Corporation is surrounded by 150+ family residences, including historical farms, ranches, and homes, water recreation areas, agricultural lands, and wildlife conservation areas. The North Fork of the San Gabriel River runs

through the area, and downstream to Lake Georgetown and Lake Granger, then into the Brazos River and on to the Gulf of Mexico. The City of Georgetown and the City of Round Rock obtain drinking water from Lake Georgetown. Toxic chemical pollution from such a facility could permanently affect people, homes, land, and agriculture nearby, as well as downstream in the river drainages. Such a facility should not be located anywhere in the area of the North Fork of the San Gabriel River. This rural area is primarily residential, agricultural, and widely used for recreation activities. This is not an industrial area. I call upon the Texas Commission on Environmental Quality (TCEQ) to RESCIND its preliminary decision and DENY the draft air quality permit for the announced Exfluor Research Corporation chemical manufacturing facility on County Road 236.

COMMENTS: Please deny this request! Exfluor should locate this new manufacturing facility in an existing chemical manufacturing area, NOT adjoining family homes in the residential, agricultural, and natural area of the North Fork of the San Gabriel River. I'm scared about the potential impact on my drinking water (since San Gabriel feeds into Lake Georgetown). I'd really appreciate any information you have to guarantee these "forever chemicals" aren't going to cause any harmful effects for me or my children. Thank you! Joy

COMMENTS: Dear Mr.Toby Baker, As a land owner on the North San Gabriel River close to the proposed Exfluor chemical manufacturing facility (CR 236) I join my neighbors with great concern about the State of Texas allowing such a facility that makes such highly toxic chemicals to exist so close to residences, a critical river water supply to a large population. It will much easier to avoid future problems for all by having a facility to be located in a much more remote location and not in a close population center as now proposed. Texas is a big state, and there are plenty of places to

accommodate such a critical facility. Thank you for your consideration to this request. Richard A. Box '61 LTG(Ret) NGTX

FAX:

COMMENTS: I've noticed a pattern of labeling the proposed Exfluor site "the Florence area," or simply "northwest Williamson county," as if to suggest the site is in the middle of nowhere and will harm nobody. This is dishonest. In fact, this area is booming with new residential construction -- including my own home, which we (myself, my wife, and our five-year-old daughter) are moving into next month -- connected with the explosive growth of Liberty Hill and its surrounding neighborhoods. As the owners of Liberty Hill Pharmacy, my wife and I are well acquainted with this growth.

I would encourage you to put down your out-of-date maps, and come explore this area for yourselves. You'll realize that the site in question is very much NOT in the middle of nowhere, but on the outskirts of a city that will rapidly grow to envelop it. I understand that Exfluor also plans to discharge chemical waste into the North Fork San Gabriel River. That river flows southeast, past more neighborhoods and recreational areas, and then takes on a new name: "Lake Georgetown." This lake supplies water to Georgetown, Round Rock, and Brushy Creek MUD, a population of over 200,000 people. Placing this facility upstream of Lake Georgetown is reckless, to say the least. I plan to attend the public meeting of Thursday, June 16. I will ask you to account for the choice of Florence High School, a red-herring location with little connection to the proposed site, which in fact obfuscates the threats posed to the air & water of greater Liberty Hill, as well as a major water supply for Georgetown and Round Rock. Following this token meeting in Florence, TCEQ must uphold its mandate by holding a *real* meeting for those populations who are actually most likely to be affected by chemical pollution or, God forbid, accidents at the proposed Exfluor facility. Those populations include, at a bare minimum: - residents of Liberty Hill and surrounding areas. - residents of Brushy Creek MUD. - residents of Georgetown. - residents of Round Rock. - the Fort Worth District of the U.S. Army Corps of Engineers, which manages the reservoir on the North Fork San Gabriel River (Lake Georgetown). This will of course require a larger venue.

COMMENTS: Hello, I am writing today to express my concern for the approval of this permit. I am a homeowner in the vicinity of the proposed site. Exflour is proposing to build a chemical plant in the center of homes and ranches. They have a concerning safety record at their other facility. There are many homes and schools within range of a chemical cloud, if/when they have a safety failure at this facility. Please do not approve the permit for a company with a mixed safety record to build a chemical plant in the midst of our community!

COMMENTS: The residents of Liberty Hill will not permit you to poison our land, animals, wildlife and children. Exflour needs to stay where they are or seek life in another state! Liberty Hill does not want industrial plants in our beautiful hill country. We will fight you all the way and sue you right into bankruptcy if you dare set up shop here and have ANY incident.

FAX:

COMMENTS: I am Robert M. Carwell. I am a retired 74-year-old attorney living on a working ranch at 6600 County Road 200, Liberty Hill, TX 78642 The proposed site for the Exfluor chemical facility for which permitting is sought from the TCEQ is just around the corner from my home, on CR 236. I strongly oppose any such permitting for this facility. I have lived at my present location for over 14 years and have raised registered miniature Hereford cattle going on two decades. We consider ourselves stewards of the land which has been entrusted to us. The property line of our home

extends to the middle of the North Fork of the San Gabriel river just south of the proposed Exfluor facility. We currently have plans to secure our cattle's drinking water and pasture irrigation from the river if feasible. My family and I have over those 14 years enjoyed tubing, swimming, and fishing in the San Gabriel and also experienced the joys of observing the varied wildlife which congregates around the river. We thus cherish the river and surrounding natural resources and will do whatever is necessary to preserve this gift to be enjoyed by future generations including grandchildren. The area surrounding the proposed chemical plant is of significant ecological and historical value and natural beauty. Moreover, there are multiple single-family dwellings proximal to the proposed site as well as numerous adjacent undeveloped parcels clearly best suited and intended for further residences. I cannot begin to understand why any governmental body would even see fit to enable the construction of such a chemical facility in the backyard of our home and that of our surrounding neighbors. Particularly when there are a multitude of other construction sites far more suitable to Exfluor's purposes without so severely impacting our quality of life. As an intellectual property lawyer for over forty years, I certainly have no objections whatever to appropriate, thoughtout growth, industrial building and progress, having served as IBM's patent portfolio manager for decades. But this proposed situs for a chemical facility is a very, very serious mistake. I URGE this Commission in the strongest possible terms to deny any and all petitions that would further the proposed construction and will do everything in my power to prevent it. Thank you for your consideration.

COMMENTS: This chemical research facility CANNOT go up in the proposed location. We have been residents of liberty hill since 2016. Our home is currently off CR 279, only 0.3 miles from the San Gabriel River which my family (consisting of my two children under 6 and husband, parents, siblings and nephews) all go to swim very frequently. This same river will run through this chemical facility which can be a risk to our health and safety. We are also currently building a house on county rd 200, address 6650 county rd 200, also in liberty hill. This is 3.3 miles away from where the proposed plant will

reside. This is going to be the home we raise our children in. Our 12.5 acres includes having the San Gabriel river run directly through our plot. I'm concerned for the safety and health of my growing children and future wildlife and agricultural endeavors we are going to take on. We very much enjoy the outdoors and we plan on spending most of our time outside (hence why we bought such a big lot). We plan on gardening and tubing in the san gabriel river just 3 miles down the road from this chemical plant. I worry for the safety of the air being inhaled by my growing children as well as what the contaminants will be on the adjacent water. This is a danger and potential health hazard to our community, natural water source and air quality. Please consider not allowing the plant to go up in a predominantly residential and agricultural area. Instead move it to a more industrialized and/or commercial location.

COMMENTS: This permit cannot be allowed. The number of residential homes around the proposed plant should be the reason alone. My husband and I are currently building off county road 200. We are building the home we plan to raise our children in who are currently five and three. To have this plant within such a short distance from my children is quite honestly very frightening. What's worse is the possibility of dumping via runoff or other means, into the San Gabriel River. As our small town grows, the potential for visitors to day trip to liberty hill and swim in the river drastically

decreases. Along with the risk it poses to the wildlife around, this CANNOT happen. Please, as a mother I'm begging this permit be denied.

COMMENTS: My family and guests enjoy spending time outside on my property. We have young children who enjoy playing outside regularly and elderly family members who regularly enjoy sitting outside and watching the birds and other wildlife. I am concerned that the air emissions from the proposed Exfluror facility will reach my property and be harmful to the health of my family, especially the very young and the very old. I am also concerned that emissions will

contain dangerous chemicals that will contaminate the land and local waterways and will travel to our property and into our groundwater, contaminating our water well, with rain events.

COMMENTS: I am opposed to air quality permit 165848 and requesting a "public meeting." As a member of NORTH SAN GABRIEL ALLIANCE, I firmly believe that there is great risk of air and water pollution from the hazardous chemical processing plant under development by Exflur Research Corporation on Williamson County Road 236. This pending Exflur Research Corporation location is surrounded by 150+ family residences, including historical farms, ranches, and homes, water recreation areas, agricultural lands, and wildlife conservation areas. The North Fork of the San Gabriel

River runs through the area, and downstream to Lake Georgetown and Lake Granger, then into the Brazos River and on to the Gulf of Mexico. The City of Georgetown and the City of Round Rock obtain drinking water from Lake Georgetown. Toxic chemical pollution from such a facility could permanently affect people, homes, land, and agriculture nearby, as well as downstream in the river drainages. Such a facility should not be located anywhere in the area of the North Fork of the San Gabriel River. This rural area is primarily residential, agricultural, and widely used for recreation activities. This is not an industrial area. I call upon the Texas Commission on Environmental Quality (TCEQ) to RESCIND its preliminary decision and DENY the draft air quality permit for the announced Exflur Research Corporation chemical manufacturing facility on County Road 236.

COMMENTS: I am opposed to air quality permit 165848 and requesting a "public meeting." As a member of NORTH SAN GABRIEL ALLIANCE, I firmly believe that there is great risk of air and water pollution from the hazardous chemical processing plant under development by Exflur Research Corporation on Williamson County Road 236. This pending Exflur Research Corporation location is surrounded by 150+ family residences, including historical farms, ranches, and homes, water recreation areas, agricultural lands, and wildlife conservation areas. The North Fork of the San Gabriel

River runs through the area, and downstream to Lake Georgetown and Lake Granger, then into the Brazos River and on to the Gulf of Mexico. The City of Georgetown and the City of Round Rock obtain drinking water from Lake Georgetown. Toxic chemical pollution from such a facility could permanently affect people, homes, land, and agriculture nearby, as well as downstream in the river drainages. Such a facility should not be located anywhere in the area of the North Fork of the San Gabriel River. This rural area is primarily residential, agricultural, and widely used for recreation activities. This is not an industrial area. I call upon the Texas Commission on Environmental Quality (TCEQ) to RESCIND its preliminary decision and DENY the draft air quality permit for the announced Exfluor Research Corporation chemical manufacturing facility on County Road 236.

COMMENTS: This permit should not be issued, Exflour should not be allowed to have a facility next to the North San Gabriel River. In addition, the land they have purchased is in a residential/ranching community, across the street from a planned 600 home neighborhood. If the were to be a spill, it would most certainly contaminate the river. I was in attendance to the meeting held in Liberty Hill to address the community concerns, they started off by bringing the priest from the church in Austin they support and asked him to pray before the meeting, the church has nothing to do with this

business other than to continue to receive donations, I thought this practice was appalling. When asked what they would be bringing to the table for the community the only response was 8-10 additional jobs and that they would spend money eating out in our town. I am a 30 year resident of the area and this company has too much risk to be allowed to operate in a residential environment, they need to relocate to an industrial park where if an accident happens, there will be people and services to address it. Currently Williamson county does not have the ability to handle a possible contamination in this area.

COMMENTS: The comments submitted are in support of TCEQ issuing the permit to ExFluor Research Corp.

**Public Comment from DHL Analytical, Inc.
FOR AN AIR QUALITY PERMIT**

PROPOSED PERMIT NUMBER: 165848

APPLICATION. Exfluor Research Corporation has applied to the Texas Commission on Environmental Quality (TCEQ) for issuance of Proposed Air Quality Permit Number 165848, which would authorize construction of the Exfluor Research facility located at 1100 County Road 236, Florence, Williamson County, Texas 76527. This application was processed in an expedited manner, as allowed by the commission's rules in 30 Texas Administrative Code, Chapter 101, Subchapter J. This application was submitted to the TCEQ on July 9, 2021. The proposed facility will emit the following contaminants: hydrogen fluorides, carbon monoxide, hazardous air pollutants, nitrogen oxides, organic compounds, and particulate matter with diameters of 10 microns or less and 2.5 microns or less.

DHL Analytical's Comment: DHL Analytical is an environmental laboratory that has had its operations in Round Rock since 1996 and our operations have been next-door neighbors of Exfluor Research Corp the entire 27 years; these comments are in support of Exfluor's permit application.

DHL Analytical can state unequivocally that Exfluor has been a very good neighbor for 27 years. A good neighbor for a business is not really much different than a good neighbor at a residence: someone who keeps the property up, someone who is friendly and willing to lend a hand if needed, and someone who is not a nuisance.

To the point of property upkeep, Exfluor has a beautiful building that has been keep up for the entire time that we've been neighbors and the landscaping is in great shape. To the point of friendly and helpful, Exfluor has provided DHL Analytical with assistance whenever we requested it, such providing help to move a heavy load that we could not do alone and checking on us during the winter freeze a year ago.

Most importantly, Exfluor is not a nuisance and is an enhancement to our operations; DHL Analytical is located immediately downwind of their building and we have never in 27 years ever had any nuisance odors or smoke or particulates or any obnoxious smells drift over our property. Because they are immediately south of our property, if there ever had been any such issues, we would have known it because of the prevailing south wind. Exfluor's qualities are the type that everyone wants in their neighbor!

Exfluor Research Corp has been a fantastic neighbor for DHL Analytical and we wish them the best in their endeavors in other parts of Williamson County.

John DuPont

Good Afternoon Laurie,

I am contacting you in response to direction received from Lola Fender. I had originally mailed in the below comment to:

Office of the Chief Clerk, MC 105
TCEQ
PO Box 13087
Austin, TX 78711-3087

This was the only address I could find on the website for this purpose. I mailed via USPS on 6/28 from the Leander, TX post office on 183. I was disappointed to hear that it was not received by your office. I very much appreciate your time, efforts and willingness to add the below. It was also my understanding during the last public meeting that an extension had been granted. This request was made by the attorney representing the members of the North San Gabriel Alliance.

Please feel free to contact me with any questions or concerns.
Thank you again.

Regards,
Guy

original mailing

I write to you to formally file our opposition to the proposed permits for the Exflour plant in Florence, TX (Permit Number 165848). We have attended both public meetings. One hosted by Exflour and one by TCEQ. Neither provided the information necessary to allow not only ourselves, but our community to feel safe with their expansion into our area. I understand this particular filing is to be limited to our own interests. This I will do here, but rest assured, these same points can easily be expanded to all in the area as some persons reside within 41 feet of the plant and Exflour representative themselves stated that the surrounding residential area serves as a 'buffer zone' as it pertains to accidents (Sources 1 & 2).

During Exflour's presentation, they presented a list of local commercial business in the area. There are three on their list that originated with me. Two of which have been sold to out of state companies and have been moved years ago. Their research and presentation is inaccurate. The one remaining is Fire Oak Distillery.

Fire Oak Distillery is a local distillery producing nationally acclaimed spirits available in over 40 states and DC. Our vodka is the highest rated domestic vodka and ranked in the top five internationally. It has the honor of earning the highest accolades in the spirits industry. As with our vodka, our bourbon too has been awarded some of the highest honors in the industry. No other distillery in the state of Texas has earned the medals we hold. One thing we do differently is open air fermentation. This means when a batch of mash is fermenting, it is open to all elements. Air contamination, at any level, be it open air or transfer would devastate all production (source 3).

As an additional interest, on the property we own, we propagate exotic and endangered wildlife species. Any and all accidents in Exflour's production, single event or slow release to which they have a history of, would not only endanger our local residents, but also endangered species.

Exflour has a history of accidents to the extent that on one occasion local residents were reportedly forced to evacuate. Because they operate under the privilege of 'self-reporting' they cannot be trusted as admittedly they last sent a 'couple of people to Home Depot to get mops and buckets.' They lack the foresight to even have cleaning materials on-site.

When an accident occurs in our area there is no infrastructure to safely neutralize the chemicals they produce and discharge (source 3). Our local volunteer fire department lacks the specialty training and equipment to handle these chemicals. Also seen in source 3, researchers found the elevated presence of PFAS levels in the blood of firefighters dealing with such facilities. This extends the danger and contamination well beyond the local residents and businesses.

Exflour's water treatment will not protect the aquifers they are positioned above. Any run off too would run down stream to the nearest water supply in Georgetown. The dangers surrounding this can be found in (source 4) where in Raleigh, Durham, Chapel Hill has contaminates of the same chemicals well above the EPA health advisory levels. (Source 5, 6, 8) references the EPA warning of these same 'forever chemicals.'

If the pre-listed resources do not yet serve our concerns (source 7), the US house voted to regulate PFAS. This bill pushed the EPA and FDA to further regulate these chemicals in 2020.

Recently too in the news is the same 'forever chemicals' linked to hundreds of Military Bases and were deemed unsafe at any level per the EPA." (Source 9). Legal reference may be obtained through the offices of Brad Bradshaw, physician and lawyer (source 10).

Further reference to the dangers of these chemicals can be found in the PACT act, passed on 06.16.2022. This is a historic comprehensive toxic exposure legislation to assist those veterans affected by these same chemicals.

In conclusion, what we are asking for the revocation of the existing permit and the declination of the proposed air permit. Exflour must simply choose a location that can safely support their business. This includes, but not limited to, road and county infrastructure but primarily to qualified services that can support them in their times of emergency. To produce here is only an effort to move outside of regulatory oversight. This puts all in assured unnecessary danger to the public and wildlife.

Two of which have been sold to out of state companies and have been moved years ago. Their research and presentation is inaccurate. The one remaining is Fire Oak Distillery.

Fire Oak Distillery is a local distillery producing nationally acclaimed spirits available in over 40 states and DC. Our vodka is the highest rated domestic vodka and ranked in the top five internationally. It has the honor of earning the highest accolades in the spirits industry. As with our vodka, our bourbon too has been awarded some of the highest honors in the industry. No other distillery in the state of Texas has earned the medals we hold. One thing we do differently is open air fermentation. This means when a batch of mash is fermenting, it is open to all elements. Air contamination, at any level, be it open air or transfer would devastate all production (source 3).

As an additional interest, on the property we own, we propagate exotic and endangered wildlife species. Any and all accidents in Exflour's production, single event or slow release to which they have a history of, would not only endanger our local residents, but also endangered species.

Exflour has a history of accidents to the extent that on one occasion local residents were reportedly forced to evacuate. Because they operate under the privilege of 'self-reporting' they cannot be trusted as admittedly they last sent a 'couple of people to Home Depot to get mops and buckets.' They lack the foresight to even have cleaning materials on-site.

When an accident occurs in our area there is no infrastructure to safely neutralize the chemicals they produce and discharge (source 3). Our local volunteer fire department lacks the specialty training and equipment to handle these chemicals. Also seen in source 3, researchers found the elevated presence of PFAS levels in the blood of firefighters dealing with such facilities. This extends the danger and contamination well beyond the local residents and businesses.

Exflour's water treatment will not protect the aquifers they are positioned above. Any run off too would run down stream to the nearest water supply in Georgetown. The dangers surrounding this can be found in (source 4) where in Raleigh, Durham, Chapel Hill has contaminates of the same chemicals well above the EPA health advisory levels. (Source 5, 6, 8) references the EPA warning of these same 'forever chemicals.'

If the pre-listed resources do not yet serve our concerns (source 7), the US house voted to regulate PFAS. This bill pushed the EPA and FDA to further regulate these chemicals in 2020.

Recently too in the news is the same 'forever chemicals' linked to hundreds of Military Bases and were deemed unsafe at any level per the EPA." (Source 9). Legal reference may be obtained through the offices of Brad Bradshaw, physician and lawyer (source 10).

Further reference to the dangers of these chemicals can be found in the PACT act, passed on 06.16.2022. This is a historic comprehensive toxic exposure legislation to assist those veterans affected by these same chemicals.

In conclusion, what we are asking for the revocation of the existing permit and the declination of the proposed air permit. Exflour must simply choose a location that can safely support their business. This includes, but not limited to, road and county infrastructure but primarily to qualified services that can support them in their times of emergency. To produce here is only an effort to move outside of regulatory oversight. This puts all in assured unnecessary danger to the public and wildlife.

COMMENTS: I am opposed to air quality permit 165848 and requesting a "public meeting." As a member of NORTH SAN GABRIEL ALLIANCE, I firmly believe that there is great risk of air and water pollution from the hazardous chemical processing plant under development by Exflur Research Corporation on Williamson County Road 236. This pending Exflur Research Corporation location is surrounded by 150+ family residences, including historical farms, ranches, and homes, water recreation areas, agricultural lands, and wildlife conservation areas. One ranch nearby also propagates

endangered species. Businesses too in this area rely on clean air and water. The North Fork of the San Gabriel River runs through the area, and downstream to Lake Georgetown and Lake Granger, then into the Brazos River and on to the Gulf of Mexico. The City of Georgetown and the City of Round Rock obtain drinking water from Lake Georgetown. Toxic chemical pollution from such a facility, who has a record of incidents, will permanently affect people, homes, land, businesses and agriculture nearby, as well as downstream in the river drainages. Such a facility should not be located anywhere in the area of the North Fork of the San Gabriel River. This rural area is primarily residential, agricultural, and widely used for recreation activities. This is not an industrial area. I call upon the Texas Commission on Environmental Quality (TCEQ) to RESCIND its preliminary decision and DENY the draft air quality permit for the announced Exflor Research Corporation chemical manufacturing facility on County Road 236.

COMMENTS: Permit Number 165848 Good morning, I implore you to not approve permit 165848. There have been too many negligent discharges at their company, and companies like theirs for us to risk our rivers and county underground water tables, let alone the families that are already living right next door to where the site is proposed! I understand Texas is attractive to businesses, but please let's not risk our future generations and current livestock business for the

sake of Exflour not having to pay more in real estate to be located in the existing industrial zones of our state. My husband and I raise beef and chickens. We also use a well. Please protect your local residents.

COMMENTS: I am opposed and request a public meeting. As a member of the North San Gabriel Alliance and a resident of the community, I am concerned about the environmental impact of this development in a residential area that includes water recreation, historic ranches and farms, agricultural areas and animal conservation areas. This is not an industrial area. I call on TCEQ to RESCIND its preliminary decision and DENY the draft air quality permit for the Exfluor Research Corporation manufacturing facility on CR236.

COMMENTS: I am opposed to air quality permit 165848 and requesting a "public meeting." As a member of NORTH SAN GABRIEL ALLIANCE, I firmly believe that there is great risk of air and water pollution from the hazardous chemical processing plant under development by Exflur Research Corporation on Williamson County Road 236. This pending Exflur Research Corporation location is surrounded by 150+ family residences, including historical farms, ranches, and homes, water recreation areas, agricultural lands, and wildlife conservation areas. The North Fork of the San Gabriel

River runs through the area, and downstream to Lake Georgetown and Lake Granger, then into the Brazos River and on to the Gulf of Mexico. The City of Georgetown and the City of Round Rock obtain drinking water from Lake Georgetown. Toxic chemical pollution from such a facility could permanently affect people, homes, land, and agriculture nearby, as well as downstream in the river drainages. Such a facility should not be located anywhere in the area of the North Fork of the San Gabriel River. This rural area is primarily residential, agricultural, and widely used for recreation activities. This is not an industrial area. I call upon the Texas Commission on Environmental Quality (TCEQ) to RESCIND its preliminary decision and DENY the draft air quality permit for the announced Exfluor Research Corporation chemical manufacturing facility on County Road 236.

COMMENTS: This proposed facility site is right next door to me, we share the property line to the West. I did not purchase my property and have a house built to have a Chemical plant go up right next door. During the purchase of our land, there were restrictions on all lots stating that no businesses shall be on the properties, how is it possible that Exfluor is able to get a construction permit?

COMMENTS: I am opposed to granting a permit to Exfluor Research Corporation for the purpose of building a chemical plant off CR236. The area surrounding this property has been filling in with residential and small ranches over the past 5-6 years. The placement of a chemical plant in this area does not make sense for a number of reasons: 1) It does not match the land use of any properties surrounding it. 2) It would be too close to existing and/or soon to be built residential units. 3) Any contamination of the air / ground water would result in possible downstream ramifications to

public water supplies (Lake Georgetown) 4) Public utilities and road infrastructure are already in poor condition in this area. Adding to that burden with a factory would cause further degradation of already poor conditions. I do live down CR236 (5 miles down the road). While this would not directly affect me, it does affect neighbors and the future development of this area. I don't see how placing a industrial/chemical facility in the midst of a bunch of residential / ranches is a good idea.

COMMENTS: I am opposed to air quality permit 165848 and requesting a "public meeting." As a member of NORTH SAN GABRIEL ALLIANCE, I firmly believe that there is great risk of air and water pollution from the hazardous chemical processing plant under development by Exflur Research Corporation on Williamson County Road 236. This pending Exflur Research Corporation location is surrounded by 150+ family residences, including historical farms, ranches, and homes, water recreation areas, agricultural lands, and wildlife conservation areas. The North Fork of the San Gabriel

River runs through the area, and downstream to Lake Georgetown and Lake Granger, then into the Brazos River and on to the Gulf of Mexico. The City of Georgetown and the City of Round Rock obtain drinking water from Lake Georgetown. Toxic chemical pollution from such a facility could permanently affect people, homes, land, and agriculture nearby, as well as downstream in the river drainages. Such a facility should not be located anywhere in the area of the North Fork of the San Gabriel River. This rural area is primarily residential, agricultural, and widely used for recreation activities. This is not an industrial area. I call upon the Texas Commission on Environmental Quality (TCEQ) to RESCIND its preliminary decision and DENY the draft air quality permit for the announced Exflor Research Corporation chemical manufacturing facility on County Road 236.

COMMENTS: We understand that Exflur manufactures fluorocarbons for NASA and the United States Air Force, among other important end users. However, Exflur should locate this new manufacturing facility in an existing chemical manufacturing area, NOT adjoining family homes in the residential, agricultural, scenic, and natural area of the North Fork of the San Gabriel River. We are requesting that persons opposed to potentially toxic air and water pollution in the rural area of the North Fork of the San Gabriel River, and downstream drainages, would submit an opposition comment

and a request for a "public meeting" to the Texas Commission on Environmental Quality regarding the pending air quality permit 165848.

COMMENTS: Not in my backyard, neighborhood or community! And, definitely not discharging into our precious local air, water, and land resources. Don't let this set a precedent allowing these companies and activities into the Liberty Hill community.

COMMENTS: am opposed to air quality permit 165848 and requesting a "public meeting." As a member of NORTH SAN GABRIEL ALLIANCE, I firmly believe that there is great risk of air and water pollution from the hazardous chemical processing plant under development by Exflur Research Corporation on Williamson County Road 236. This pending Exflur Research Corporation location is surrounded by 150+ family residences, including historical farms, ranches, and homes, water recreation areas, agricultural lands, and wildlife conservation areas. The North Fork of the San Gabriel

River runs through the area, and downstream to Lake Georgetown and Lake Granger, then into the Brazos River and on to the Gulf of Mexico. The City of Georgetown and the City of Round Rock obtain drinking water from Lake Georgetown. Toxic chemical pollution from such a facility could permanently affect people, homes, land, and agriculture nearby, as well as downstream in the river drainages. Such a facility should not be located anywhere in the area of the North Fork of the San Gabriel River. This rural area is primarily residential, agricultural, and widely used for recreation activities. This is not an industrial area. I call upon the Texas Commission on Environmental Quality (TCEQ) to RESCIND its preliminary decision and DENY the draft air quality permit for the announced Exflor Research Corporation chemical manufacturing facility on County Road 236.

I call upon the Texas Commission on Environmental Quality (TCEQ) to RESCIND its preliminary decision and DENY the draft air quality permit for the announced Exfluor Research Corporation chemical manufacturing facility on County Road 236. Now, for my personal bit. I have worked HARD to afford my chunk of country life in this great state so I can raise my kids in an area that allows them to understand nature and learn the benefits of working hard and being kind. I want them to have the opportunities to swim in a water trough, climb a tree, see a family of skunks, catch catfish in a pond (and not be afraid to eat them due to chemical infection), and hunt for their food. If you take a second to browse the news headlines, I think you'll agree that the world needs more opportunities like this. The proposed chemical processing plant (permit 165848) will take these and many more opportunities away from my family (and many others like mine) by adding risks that we are not willing to tolerate. I have watched far too many historical family farms get ruined by these type of acts and we will NOT stand by and let this continue.

COMMENTS: Hello, I am located a couple of miles from Exfluor's property on CR 236, the site of their proposed chemical processing plant. I am not a chemist but I understand the chemicals Exfluor proposes to use, store and process at the site to be hazardous and a threat to the environment of this residential and agricultural area of Williamson County. Leaks and mistakes happen even under the best of conditions and practices. I and most people in this area get our water from wells and I am especially concerned well contamination and water quality of the North Fork San Gabriel River.

Based on what I know, the TCEQ should deny Exfluor's permit request to operate their facility at this location. There are too many residential homes in the immediate vicinity. A chemical processing plant like this should be located in a commercial or industrial development, away from residences and livestock.

We are extremely disappointed by this. We did not spend our life savings three years ago and buy 40 plus acres of land only to find out a chemical plant is being put just down the road. Why does everyone have restrictions except this piece of land. Why build amongst all the ranches and farm land. We don't want the toxins for our animals and families. Build somewhere else, ~~not amongst~~

COMMENTS: I am opposed to air quality permit 165848 and requesting a "public meeting." As a member of NORTH SAN GABRIEL ALLIANCE, I firmly believe that there is great risk of air and water pollution from the hazardous chemical processing plant under development by Exfluor Research Corporation on Williamson County Road 236. This pending Exfluor Research Corporation location is surrounded by 150+ family residences, including historical farms, ranches, and homes, water recreation areas, agricultural lands, and wildlife conservation areas. The North Fork of the San Gabriel

River runs through the area, and downstream to Lake Georgetown and Lake Granger, then into the Brazos River and on to the Gulf of Mexico. The City of Georgetown and the City of Round Rock obtain drinking water from Lake Georgetown. Toxic chemical pollution from such a facility could permanently affect people, homes, land, and agriculture nearby, as well as downstream in the river drainages. Such a facility should not be located anywhere in the area of the North Fork of the San Gabriel River. This rural area is primarily residential, agricultural, and widely used for recreation activities. This is not an industrial area. I call upon the Texas Commission on Environmental Quality (TCEQ) to RESCIND its preliminary decision and DENY the draft air quality permit for the announced Exfluor Research Corporation chemical manufacturing facility on County Road 236.

COMMENTS: According to comments from a retired DOW Chemical research scientist, hydrogen fluoride is an extremely dangerous and deadly chemical. In addition to Exfluor stating in their permit application they will be emitting this and other dangerous chemicals, they have also failed to comply with permit conditions in years past. These facts raise critical health and environmental concerns, and I urgently request that TCEQ take action to DENY Permit No. 165848, Exfluor

Research, 1100 County Road 236, Florence, Williamson County, Texas, 76527. Also, if needed, I join the residents of the area requesting an in-person “public meeting” in the local County Road 236 area at a location to be determined later.

COMMENTS: I do NOT support this plant being permitted to be built. This company is a known polluter and will damage our air quality, surrounding water streams and soil. We have invested all we have into our family's home and knowing that this plant will potentially be permitted to be built close enough to our home to cause damage to our air quality and environment which can cause health concerns for our children and ourselves is devastating. How can permitting

agencies that are supposed to help protect our residential areas even be allowing this? Look into the history of this company and do not give them their final permits!

Austin, TX 78753

RE: Exflur – Permit Number 165848

TCEQ Staff,

I am elected to represent individuals in Precinct Two of Williamson County, which includes the area on County Road 236 where Exflur Research Corporation is requesting permit number 165848 to be approved, allowing a chemical manufacturing site to be created. This area of the county is primarily residential and agricultural in nature. There are no public utilities available, therefore, homes in this area of my precinct are on septic systems, with wells for their family's water source. Many of my constituents are concerned that relocation of the Exflur Corporation's chemical manufacturing site will over tax the water supply and not be a cohesive use with current property owners in the area. Additionally, they are concerned about any spills or biproducts of production that could potentially contaminate the water supply and air.

I request that the TCEQ do a full and thorough review of the above referenced permit and that the concerns of the neighboring property owners be considered in the process.

Sincerely,

Commissioner Cynthia P. Long

COMMENTS: I am opposed to air quality permit 165848 and requesting a "public meeting." As a member of NORTH SAN GABRIEL ALLIANCE, I firmly believe that there is great risk of air and water pollution from the hazardous chemical processing plant under development by Exfluor Research Corporation on Williamson County Road 236. This pending Exfluor Research Corporation location is surrounded by 150+ family residences, including historical farms, ranches, and homes, water recreation areas, agricultural lands, and wildlife conservation areas. The North Fork of the San Gabriel

River runs through the area, and downstream to Lake Georgetown and Lake Granger, then into the Brazos River and on to the Gulf of Mexico. The City of Georgetown and the City of Round Rock obtain drinking water from Lake Georgetown. Toxic chemical pollution from such a facility could permanently affect people, homes, land, and agriculture nearby, as well as downstream in the river drainages. Such a facility should not be located anywhere in the area of the North Fork of the San Gabriel River. This rural area is primarily residential, agricultural, and widely used for recreation activities. This is not an industrial area. I call upon the Texas Commission on Environmental Quality (TCEQ) to RESCIND its preliminary decision and DENY the draft air quality permit for the announced Exfluor Research Corporation chemical manufacturing facility on County Road 236.

COMMENTS: Good morning, I implore you to not approve permit 165848. There have been too many negligent discharges at their company, and companies like theirs for us to risk our rivers and county underground water tables, let alone the families that are already living right next door to where the site is proposed! I understand Texas is attractive to businesses, but please let's not risk our future generations and current livestock business for the sake of Exflour not having to pay more in real estate to be located in the existing industrial zones of our state.

COMMENTS: Office of the Chief Clerk TCEQ Austin, Texas RE: Permit 165848 I am addressing my concerns and community concerns about a chemical manufacturing facility being located in the middle of residential properties and a ranches/agriculture community that is solely dependent on the water wells/reservoir and quality air for their health and livelihood and this proposed permit site has no public utilities. 1. Why is Exfluor locating a toxic chemical plant in the middle of residences and properties dependent upon the water and air quality and why does TCEQ believe this is

acceptable? 2. What is the projected water usage of this facility? 3. What are the proposed water usage limits on this facility as no public utilities exist and this type of facility will potentially put ongoing consumption pressure on the reservoir well beyond the consumption in the area today? 4. Contamination (Water and Air) – if/when the water reservoir is contaminated and the air quality decreases it will render the properties around this site valueless. Why is Exfluor not locating this facility to an existing area established for chemical manufacturing facilities and why is TCEQ not requiring this? 5. Contamination (Water and Air) – What financial assurances are being required to be put in place to protect and reimburse the surrounding community when the eventual contamination occurs? 6. What is the history of Exfluor with contamination leaks and responses and penalties? 7. Exfluor’s argument that other businesses exist in the area is not apples and apples, no other business in the area emits or has the potential to leak toxic chemicals into the community environment. 8. How close geographically is Exfluor’s CEO’s personal residence to their closest chemical manufacturing facility? 9. How close does TCEQ’s permit decision makers live to a chemical manufacturing facility? I am trusting the permit will be reversed and denied for all of the obvious reasons and concerns.

COMMENTS: 3,074 have signed this petition as of 6-15-2022. See attached. Prevent toxic chemical pollution in the area of the North Fork of the San Gabriel River! Join the fight to STOP AND PREVENT TOXIC CHEMICAL MANUFACTURING POLLUTION in the area of the North Fork of the San Gabriel River! Please join North San Gabriel Alliance in filing a

response requesting the Texas Commission on Environmental Quality (TCEQ) to RESCIND its preliminary decision and DENY the draft air quality permit for the announced Exfluor Research Corporation chemical manufacturing facility on County Road 236. If approved, this air quality permit would allow Exfluor Research Corporation to begin construction of this chemical manufacturing facility in northwest Williamson County, Texas. Exfluor Research Corporation uses fluorine gas to convert hydrocarbons to fluorocarbons. In the Notice for this proposed facility Exfluor states: "The proposed facility will emit the following contaminants: hydrogen fluorides, carbon monoxide, hazardous air pollutants, nitrogen oxides and organic compounds." The manufacturing process is dangerous and has produced documented leaks of hydrofluoric acid and other chemical products at other facilities. These chemicals are often referred to as "forever chemicals" because they do not degrade in nature. The pending Exfluor Research Corporation location on County Road 236 is surrounded by 150+ family residences, including historical farms, ranches, and homes, water recreation areas, agricultural lands, and wildlife conservation areas. The North Fork of the San Gabriel River runs through the area, and downstream to Lake Georgetown and Lake Granger, then into the Brazos River and on to the Gulf of Mexico. The City of Georgetown and the City of Round Rock obtain drinking water from Lake Georgetown. Exfluor Research Corporation has already obtained a wastewater evaporation permit, which would allow them to construct an evaporation pond. Receiving water body - North Fork of the San Gabriel River. We understand that Exfluor manufactures fluorocarbons for NASA and the United States Air Force, among other important end users. However, Exfluor should locate this new manufacturing facility in an existing chemical manufacturing area, NOT adjoining family homes in the residential, agricultural, scenic, and natural area of the North Fork of the San Gabriel River. Texas Commission on Environmental Quality (TCEQ) and Exfluor Research Corporation have the opportunity to do the right thing and RESCIND the preliminary decision and DENY the draft air permit for the County Road 236 location. In addition, TCEQ and other regulators must withdraw and deny other permits for this chemical manufacturing facility, and other potential polluters and abusers of the North San Gabriel River area. Join the fight!

3,074 have signed this petition as of 6-15-2022

Prevent toxic chemical pollution in the area of the North Fork of the San Gabriel River!

NORTH SAN GABRIEL ALLIANCE started this petition

Urgent: Submit your objections against a pending permit approval now.

Join the fight to STOP AND PREVENT TOXIC CHEMICAL MANUFACTURING POLLUTION in the area of the North Fork of the San Gabriel River!

Please join North San Gabriel Alliance in filing a response requesting the Texas Commission on Environmental Quality (TCEQ) to RESCIND its preliminary decision and DENY the draft air quality permit for the announced Exfluor Research Corporation chemical manufacturing facility on County Road 236.

If approved, this air quality permit would allow Exfluor Research Corporation to begin construction of this chemical manufacturing facility in northwest Williamson County, Texas.

Exfluor Research Corporation uses fluorine gas to convert hydrocarbons to fluorocarbons. In the Notice for this proposed facility Exfluor states: “The proposed facility will emit the following contaminants: hydrogen fluorides, carbon monoxide, hazardous air pollutants, nitrogen oxides and organic compounds.” The manufacturing process is dangerous and has produced documented leaks of hydrofluoric acid and other chemical products at other facilities. These chemicals are often referred to as “forever chemicals” because they do not degrade in nature.

The pending Exfluor Research Corporation location on County Road 236 is surrounded by 150+ family residences, including historical farms, ranches, and homes, water recreation areas, agricultural lands, and wildlife conservation areas. The North Fork of the San Gabriel River runs through the area, and downstream to Lake Georgetown and Lake Granger, then into the Brazos River and on to the Gulf of Mexico. The City of Georgetown and the City of Round Rock obtain drinking water from Lake Georgetown.

Exfluor Research Corporation has already obtained a wastewater evaporation permit, which would allow them to construct an evaporation pond. Receiving water body - North Fork of the San Gabriel River.

We understand that Exfluor manufactures fluorocarbons for NASA and the United States Air Force, among other important end users. However, Exfluor should locate this new manufacturing facility in an existing chemical manufacturing area, NOT adjoining family homes in the residential, agricultural, scenic, and natural area of the North Fork of the San Gabriel River.

Texas Commission on Environmental Quality (TCEQ) and Exfluor Research Corporation have the opportunity to do the right thing and RESCIND the preliminary decision and DENY the draft air permit for the County Road 236 location.

In addition, TCEQ and other regulators must withdraw and deny other permits for this chemical manufacturing facility, and other potential polluters and abusers of the North San Gabriel River area. Join the fight!

COMMENTS: Exfluor Research Corporation lists perfluorooctanoic acid as a product on line 10 of the attached product information page downloaded from <http://www.exfluor.com/bycategory.php?cat=acids>. This compound is identified in the June 15, 2022 EPA health advisories. ==== <https://www.epa.gov/newsreleases/epa-announces-new-drinking-water-health-advisories-pfas-chemicals-1-billion-bipartisan> (excerpts below) WASHINGTON (June 15, 2022) Today, the U.S.

Environmental Protection Agency (EPA) released four drinking water health advisories for per- and polyfluoroalkyl substances (PFAS) in the latest action under President Biden's action plan to deliver clean water and Administrator Regan's PFAS Strategic Roadmap. EPA also announced that it is inviting states and territories to apply for \$1 billion – the first of \$5 billion in Bipartisan Infrastructure Law grant funding – to address PFAS and other emerging contaminants in drinking water, specifically in small or disadvantaged communities. These actions build on EPA's progress to safeguard communities from PFAS pollution and scientifically inform upcoming efforts, including EPA's forthcoming proposed National Primary Drinking Water Regulation for PFOA and PFOS, which EPA will release in the fall of 2022. EPA is issuing interim, updated drinking water health advisories for perfluorooctanoic acid (PFOA) and perfluorooctane sulfonic acid (PFOS) that replace those EPA issued in 2016. The updated advisory levels, which are based on new science and consider lifetime exposure, indicate that some negative health effects may occur with concentrations of PFOA or PFOS in water that are near zero and below EPA's ability to detect at this time. The lower the level of PFOA and PFOS, the lower the risk to public health. EPA recommends states, Tribes, territories, and drinking water utilities that detect PFOA and PFOS take steps to reduce exposure. Most uses of PFOA and PFOS were voluntarily phased out by U.S. manufacturers, although there are a limited number of ongoing uses, and these chemicals remain in the environment due to their lack of degradation. For the first time, EPA is issuing final health advisories for perfluorobutane sulfonic acid and its potassium salt (PFBS) and for hexafluoropropylene oxide (HFPO) dimer acid and its ammonium salt ("GenX" chemicals). In chemical and product manufacturing, GenX chemicals are considered a replacement for PFOA, and PFBS is considered a replacement for PFOS. The GenX chemicals and PFBS health advisory levels are well above the level of detection, based on risk analyses in recent scientific studies. The agency's new health advisories provide technical information that federal, state, and local agencies can use to inform actions to address PFAS in drinking water, including water quality monitoring, optimization of existing technologies that reduce PFAS, and strategies to reduce exposure to these substances. EPA'S LIFETIME HEALTH ADVISORIES ALSO TAKE INTO ACCOUNT OTHER POTENTIAL SOURCES OF EXPOSURE TO THESE PFAS BEYOND DRINKING WATER (FOR EXAMPLE, FOOD, * AIR *, CONSUMER PRODUCTS, ETC.), WHICH PROVIDES AN ADDITIONAL LAYER OF PROTECTION.

COMMENTS: 3,074 have signed this petition as of 6-15-2022. See attached. Prevent toxic chemical pollution in the area of the North Fork of the San Gabriel River! Join the fight to STOP AND PREVENT TOXIC CHEMICAL MANUFACTURING POLLUTION in the area of the North Fork of the San Gabriel River! Please join North San Gabriel Alliance in filing a

response requesting the Texas Commission on Environmental Quality (TCEQ) to RESCIND its preliminary decision and DENY the draft air quality permit for the announced Exfluor Research Corporation chemical manufacturing facility on County Road 236. If approved, this air quality permit would allow Exfluor Research Corporation to begin construction of this chemical manufacturing facility in northwest Williamson County, Texas. Exfluor Research Corporation uses fluorine gas to convert hydrocarbons to fluorocarbons. In the Notice for this proposed facility Exfluor states: "The proposed facility will emit the following contaminants: hydrogen fluorides, carbon monoxide, hazardous air pollutants, nitrogen oxides and organic compounds." The manufacturing process is dangerous and has produced documented leaks of hydrofluoric acid and other chemical products at other facilities. These chemicals are often referred to as "forever chemicals" because they do not degrade in nature. The pending Exfluor Research Corporation location on County Road 236 is surrounded by 150+ family residences, including historical farms, ranches, and homes, water recreation areas, agricultural lands, and wildlife conservation areas. The North Fork of the San Gabriel River runs through the area, and downstream to Lake Georgetown and Lake Granger, then into the Brazos River and on to the Gulf of Mexico. The City of Georgetown and the City of Round Rock obtain drinking water from Lake Georgetown. Exfluor Research Corporation has already obtained a wastewater evaporation permit, which would allow them to construct an evaporation pond. Receiving water body - North Fork of the San Gabriel River. We understand that Exfluor manufactures fluorocarbons for NASA and the United States Air Force, among other important end users. However, Exfluor should locate this new manufacturing facility in an existing chemical manufacturing area, NOT adjoining family homes in the residential, agricultural, scenic, and natural area of the North Fork of the San Gabriel River. Texas Commission on Environmental Quality (TCEQ) and Exfluor Research Corporation have the opportunity to do the right thing and RESCIND the preliminary decision and DENY the draft air permit for the County Road 236 location. In addition, TCEQ and other regulators must withdraw and deny other permits for this chemical manufacturing facility, and other potential polluters and abusers of the North San Gabriel River area. Join the fight!

3,074 have signed this petition as of 5-15-2002

Prevent toxic chemical pollution in the area of the North Fork of the San Gabriel River!

NORTH SAN GABRIEL ALLIANCE started this petition

Urgent: Submit your objections against a pending permit approval now.

Join the fight to STOP AND PREVENT TOXIC CHEMICAL MANUFACTURING POLLUTION in the area of the North Fork of the San Gabriel River!

Please join North San Gabriel Alliance in filing a response requesting the Texas Commission on Environmental Quality (TCEQ) to RESCIND its preliminary decision and DENY the draft air quality permit for the announced Exfluor Research Corporation chemical manufacturing facility on County Road 236.

If approved, this air quality permit would allow Exfluor Research Corporation to begin construction of this chemical manufacturing facility in northwest Williamson County, Texas.

Exfluor Research Corporation uses fluorine gas to convert hydrocarbons to fluorocarbons. In the Notice for this proposed facility Exfluor states: “The proposed facility will emit the following contaminants: hydrogen fluorides, carbon monoxide, hazardous air pollutants, nitrogen oxides and organic compounds.” The manufacturing process is dangerous and has produced documented leaks of hydrofluoric acid and other chemical products at other facilities. These chemicals are often referred to as “forever chemicals” because they do not degrade in nature.

The pending Exfluor Research Corporation location on County Road 236 is surrounded by 150+ family residences, including historical farms, ranches, and homes, water recreation areas, agricultural lands, and wildlife conservation areas. The North Fork of the San Gabriel River runs through the area, and downstream to Lake Georgetown and Lake Granger, then into the Brazos River and on to the Gulf of Mexico. The City of Georgetown and the City of Round Rock obtain drinking water from Lake Georgetown.

Exfluor Research Corporation has already obtained a wastewater evaporation permit, which would allow them to construct an evaporation pond. Receiving water body - North Fork of the San Gabriel River.

We understand that Exfluor manufactures fluorocarbons for NASA and the United States Air Force, among other important end users. However, Exfluor should locate this new manufacturing facility in an existing chemical manufacturing area, NOT adjoining family homes in the residential, agricultural, scenic, and natural area of the North Fork of the San Gabriel River.

Texas Commission on Environmental Quality (TCEQ) and Exfluor Research Corporation have the opportunity to do the right thing and RESCIND the preliminary decision and DENY the draft air permit for the County Road 236 location.

In addition, TCEQ and other regulators must withdraw and deny other permits for this chemical manufacturing facility, and other potential polluters and abusers of the North San Gabriel River area. Join the fight!

COMMENTS: NORTH SAN GABRIEL ALLIANCE requests a "public meeting" regarding draft air quality permit 165848. This draft air quality permit must be RESCINDED and DENIED. For health and environmental protection reasons, Exfluor Research Corporation must never be allowed to build in our area. "Hydrogen fluoride is an extremely dangerous chemical - eats your skin, including tissue in your lungs. You cannot ever get it on your body or breathe it. Vapor inhaled

can be fatal. One drop on your fingernail and you'll lose your nail. This should never be released into the air. This is DEADLY dangerous. Exfluor, by their own admission, will emit hydrogen fluoride if this plant is built." Robert F. Harris Sr. PhD. Retired Dow Chemical research scientist, organic chemistry. See accompanying uploaded letter.

Dr. Robert F. Harris, PhD

To whom it may concern:

I would like to address the TCEQ proposed air quality permit #165848 for Exfluor, a hydrogen fluoride based chemical plant that is planned to be built on County Road 236 in Williamson County, Texas.

The notice for the proposed Exfluor facility states, "The proposed facility will emit the following contaminants: hydrogen flourides, carbon monoxide, hazardous air pollutants, nitrogen oxides and organic compounds."

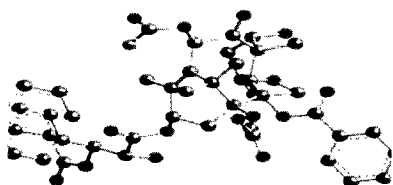

The critical effects of inhalation exposure to hydrogen fluoride are respiratory tract irritation and the induction of respiratory disease, even with low level emissions. At higher levels, as what happens in the inevitable accidental or unexpected release, fatalities are possible.

As a research chemist (now retired) of 40 years, and with a vested personal interest because my daughter and her family live within the emissions radius, I believe allowing the chemical plant to operate so close to residential homes, ranchettes, farms and ranches is not only irresponsible, but downright dangerous. Exfluor, by its own admission, will emit hydrogen fluoride if this plant is built. Hydrogen fluoride should never be released into the air where people live. This is a DEADLY dangerous gas.

COMMENTS: I am opposed to air quality permit 165848 and requesting a "public meeting." As a member of NORTH SAN GABRIEL ALLIANCE, I firmly believe that there is great risk of air and water pollution from the hazardous chemical processing plant under development by Exflur Research Corporation on Williamson County Road 236. This pending Exflur Research Corporation location is surrounded by 150+ family residences, including historical farms, ranches, and homes, water recreation areas, agricultural lands, and wildlife conservation areas. The North Fork of the San Gabriel

River runs through the area, and downstream to Lake Georgetown and Lake Granger, then into the Brazos River and on to the Gulf of Mexico. The City of Georgetown and the City of Round Rock obtain drinking water from Lake Georgetown. Toxic chemical pollution from such a facility could permanently affect people, homes, land, and agriculture nearby, as well as downstream in the river drainages. Such a facility should not be located anywhere in the area of the North Fork of the San Gabriel River. This rural area is primarily residential, agricultural, and widely used for recreation activities. This is not an industrial area. I call upon the Texas Commission on Environmental Quality (TCEQ) to RESCIND its preliminary decision and DENY the draft air quality permit for the announced Exfluor Research Corporation chemical manufacturing facility on County Road 236.

COMMENTS: Good morning. I was the guy with the bright Orange hat last night. My apologies for not making my point clear, my emotions got the best of me. Exflur has a track record of over a dozen violations, repeat violations and would rather pay off fines than fix the issues. They claim to have been thinking of this facility for years, yet only last night figured to start thinking of mosquito netting for their retention ponds after they were probed about it, for God's sake. Any process event they eventually get caught slacking off on will be probably be dealt with the same as the last 16

violations: pay the fine. To them it's just the cost of doing business, especially when the fines have been in the order of a few thousand, and their revenues are a few million. We, on the other hand, will be left to deal with the true environmental cost that will affect many of our livelihoods, and even lives, for years to come. Thank you, once again for extending the comment period.

COMMENTS: Good morning, I implore you to not approve permit 165848. There have been too many negligent discharges at their company, and companies like theirs for us to risk our rivers and county underground water tables, let alone the families that are already living right next door to where the site is proposed! I understand Texas is attractive to businesses, but please let's not risk our future generations and current livestock business for the sake of Exflour not having to pay more in real estate to be located in the existing industrial zones of our state.

Austin, TX 78711-3087

RE: Request for Contested Case Hearing on Application by Exflur Research Corporation Permit Number 165848

Dear Chief Clerk,

I, Haziel Williams, request a Contested Case Hearing with respect to the TCEQ Air Quality Permit Number 165848 sought by Exflur Research Corporation for the proposed facility at 1100 County Road 236, Florence, TX 76527.

I am an Affected Person for Purposes of a Contested Case Hearing who will be impacted by the approval of the proposed permit due to the Proximity of my land to the Proposed Plant. I own two tracts of land within one mile of the Exflur plant; one tract is less than 3000 feet away and the second tract is approximately 4000 feet away. (see attached map) Because of the proximity, and my hypersensitivity to chemicals in my environment, I have a justiciable interest in ensuring that my health and safety will not be adversely impacted by any emissions from the proposed Exflur plant.

If the applicant obtains the air permit and fails to protect my health and interests, I could be irreparably harmed. I suffer from idiopathic anaphylaxis which can be triggered by insignificant levels of chemicals in my environment.

I am a registered Licensed Professional Therapist Associate with Hope for a Better Tomorrow Counseling Services PLLC (hopecounselingsatx.com) and will have a Children's Equine Therapy counseling practice on my land. Due to my own lifelong idiopathic anaphylaxis condition, I have chosen as part of my practice to work with children who have a variety of respiratory and hyperallergic health conditions that are by triggered chemical emissions.

I believe that Exflur's history has established that they do not place a priority on community health, are not fazed by violations of their permit limits, and do not respond timely or properly to emissions events.

Further, I am aghast that Exflur informed my daughter, Elizabeth Williams, that one of their reasons for constructing a new facility at 1100 County Road 236 was because of their concern that PFOA and HF emission and discharge regulations are soon to be tightened, and that they believed PFOA and HF scrutiny of their municipal Round Rock facility might impact their production plans. By implication, a rural facility would not be under the same level of scrutiny

and might not face consequences from emissions or discharge issues. Imagine the impact on my health as well as the children I treat in therapy being the recipients of these unallowable toxic emissions.

Exfluor's prior incident: When Exfluor leaked toxic gas at approximately 8:15 am Thursday, September 18, 2014, the employees at Christianson Air Conditioning and Plumbing, next door to Exfluor, made the initial call to 9-1-1 after workers there complained of difficulty breathing. Their lung damage due to the chemical exposure has not been released to the public or by a pulmonologist. The children in Cedar Ridge High School, 1,000 feet from the Exfluor plant, were locked down when the leak began until the leak was moderately contained in the factory building around 4:00 pm.

Please do not approve the Exfluor air permit 165848 application, due to this is a residential area with families, a recreational area where people are active outdoors and play in the river. The air pollution will become soil and surface water pollution, and eventually ground water pollution and river runoff pollution. These acids and forever chemicals would affect the region for decades.

For these reasons I request that the TCEQ Commissioners grant a contested case hearing regarding pending air permit 165848.

Sincerely,
Hazel Williams

COMMENTS: I, Danny Merton, on October 13, 2022 request a new air permit to protect my Merton Pecan Orchard and my Angus cattle herd. This is an organic operation that my family has been building for over 20 years. Our property McCormick Ranch, is less than a mile from the chemical site and will adversely affect my retirement agriculture business. I request the chemical company to move to a commercial location considering the chemical violations/ situation in the past. My family has worked our land for over 150 years. I am a 7th generation Texan and believe in protecting the land

animals and my family that has been living on My land. More research is required, To study the effects. Thank you,
Danny Merton

COMMENTS: Fluorine is a known chemical to be volatile and explosive if not properly handled. Given the chemical plant explosion in Waco and proximity to residential areas, it is a safety issue. Waco is not the same chemicals as fluorine, but having a residential area near a chemical plant is a safety hazard and concern. Given the areas growth, this would be a huge concern for the future residents that'll move near this plant. The company should identify a further remote area for their work and ensure a distance exists between them and residential areas.

COMMENTS: I am opposed to air quality permit 165848 and requesting a "public meeting." As a member of NORTH SAN GABRIEL ALLIANCE, I firmly believe that there is great risk of air and water pollution from the hazardous chemical processing plant under development by Exflur Research Corporation on Williamson County Road 236. This pending Exflur Research Corporation location is surrounded by 150+ family residences, including historical farms, ranches, and homes, water recreation areas, agricultural lands, and wildlife conservation areas. The North Fork of the San Gabriel

River runs through the area, and downstream to Lake Georgetown and Lake Granger, then into the Brazos River and on to the Gulf of Mexico. The City of Georgetown and the City of Round Rock obtain drinking water from Lake Georgetown. Toxic chemical pollution from such a facility could permanently affect people, homes, land, and agriculture nearby, as well as downstream in the river drainages. Such a facility should not be located anywhere in the area of the North Fork of the San Gabriel River. This rural area is primarily residential, agricultural, and widely used for recreation activities. This is not an industrial area. I call upon the Texas Commission on Environmental Quality (TCEQ) to RESCIND its preliminary decision and DENY the draft air quality permit for the announced Exflor Research Corporation chemical manufacturing facility on County Road 236.

COMMENTS: I am opposed to air quality permit 165848 and requesting a "public meeting." As a member of NORTH SAN GABRIEL ALLIANCE, I firmly believe that there is great risk of air and water pollution from the hazardous chemical processing plant under development by Exflur Research Corporation on Williamson County Road 236. This pending Exflur Research Corporation location is surrounded by 150+ family residences, including historical farms, ranches, and homes, water recreation areas, agricultural lands, and wildlife conservation areas. The North Fork of the San Gabriel

River runs through the area, and downstream to Lake Georgetown and Lake Granger, then into the Brazos River and on to the Gulf of Mexico. The City of Georgetown and the City of Round Rock obtain drinking water from Lake Georgetown. Toxic chemical pollution from such a facility could permanently affect people, homes, land, and agriculture nearby, as well as downstream in the river drainages. Such a facility should not be located anywhere in the area of the North Fork of the San Gabriel River. This rural area is primarily residential, agricultural, and widely used for recreation activities. This is not an industrial area. I call upon the Texas Commission on Environmental Quality (TCEQ) to RESCIND its preliminary decision and DENY the draft air quality permit for the announced Exfluor Research Corporation chemical manufacturing facility on County Road 236.

COMMENTS: Hydrogen fluoride is an extremely dangerous chemical - eats your skin, including tissue in your lungs. You cannot ever get it on your body or breathe it. Vapor inhaled can be fatal. One drop on your fingernail and you'll lose your nail. This should never be released into the air. This is DEADLY dangerous. Exfluor, by their own admission, will emit hydrogen fluoride if this plant is built." Robert F Harris Sr PhD. Retired Dow Chemical research scientist, organic

chemistry. We don't want this chemical plant near our water or in our air, near our families, our children, our pets.
Sincerely, A concerned citizen.

COMMENTS: Good afternoon, I strongly implore you to not approve permit 165848. There have been too many negligent discharges at the Exflour company, and companies like this for us to risk our rivers and county underground water tables, let alone the families, livestock and agricultural activities that are established right next door to where the site is proposed! This proposed site directly impacts the surrounding community as well as any and all users or habitants of the San Gabriel river. The health and welfare of families, land, water and air quality, and the environment is at risk of

exposure to toxic chemicals that this plant is known to excrete. I understand Texas is attractive to businesses, but please let's not risk our future generations and livestock, land and resources for the sake of the Exflour companies desire to relocate from its existing industrial location into a ETJ with far less oversight. This business type belongs in an area that can support safe production, public oversight, limited risk and quick identification and remediation of any hazards. Given the relocation from a business park to a remote rural area it appears that this company intends to keep facilities from the public eye. Provided the history of chemical failures and resulting exposure it is clear that this is not the appropriate location to support a business with this level of risk to people, animal, agriculture or the environment.

COMMENTS: It would only be prudent to DENY the above referenced permit. How this could be deemed a good idea in a growing and already populated area is a concern. Companies which have had past issues with non-compliance should always be held to a higher standard and this company/permit deserves the highest scrutiny. Do we need to have another event like the fertilizer explosion in West, Texas or do we need to wake up in 30 years to figure out that the compromised air quality has sickened or killed residents or leached chemicals into the ground water? A facility like this

operates outside of a City jurisdiction to avoid scrutiny and air quality controls. This facility chose this location without fire flow, without a full fire station (HazMat) even though it presents a high risk. Deny this permit, please.

☒ I wish to provide formal *WRITTEN COMMENTS* at tonight's public meeting.

(Written comments may be submitted at any time during the meeting)

Please give this form to the person at the information table. Thank you.

Heather Pacheco — 201 cowboy trail liberty Hill

Thank you for your time today and for hearing the public's concerns.

I am a rancher in Liberty Hill who lives about 5 miles from the parcel in question.

I implore you to deny permit # 165848

Exflour has stated the parcel is a commercial area. This is absolutely false. Take a left on CR 200 and you will find thousands of homeowners in the thriving LTISD, many of whom have wells for water on their properties. We all wish to live our lives devoid of toxins and cancer in our air, water and food.

The parcel is on the San Gabriel River and is in the environmentally sensitive Edwards Aquifer Recharge zone.

The impact of Exflour's operations would have an extremely far negative reach.

This area does not have buildings / structures in the way of blocking the wind, especially compared to the area the Round Rock location is in. The wind will carry these toxic chemicals with ease.

Exflour has had 16 violations in less than 3 years. More violations will come at a new facility with new processes. Approving this permit will put thousands of innocent lives at risk.

RECEIVED
PUBLIC AFFAIRS

JUN 16 2022

OFFICE OF THE
ATTORNEY GENERAL

MEETING AGENDA

- Introductions.....TCEQ
- Identify Elected Officials.....TCEQ
- Presentations.....Applicant & TCEQ

Informal Discussion Period

- Questions & Answers.....Public

Members of the public may ask questions during this time period. TCEQ staff and the Applicant will respond to questions. This time period is for discussion purposes and for obtaining information from TCEQ staff and the Applicant. **Questions and/or comments made during this period will not be considered formal comment and will not go to the Commissioners. Additionally, no written response will be prepared for comments made during this period. Please note, depending on the number of commenters who indicate a desire to provide formal comments, the Informal Discussion Period may be limited or omitted.**

Formal Comment Period

- Formal Comments.....Public

During the formal comment period members of the public may voice concerns or comments. **Neither the Applicant nor TCEQ staff will respond during the formal comment period.** After the close of all comment periods, the Executive Director will summarize the formal comments and prepare a written response to comments (RTC). This RTC will be made available to the public and will also be mailed to those who submitted written comments or formal comments at a public meeting.

Everyone who wishes to comment will have the opportunity to do so, however, we may ask that each commenter limit their time so that everyone will have time to speak.

- Closing Remarks/Adjournment.....TCEQ

Please Note: Written comments may be submitted anytime to the registration table during the meeting.

COMMENTS: Please do not permit Exflour to build a chemical plant on CR 236. There are a significant number of families in this area who do not deserve to be exposed to the Cancer causing agents that will be leached into our air and water. This is an Edwards Aquifer Recharge Zone and the water impact will be extremely vast. Please do not allow this to happen in my community. These harmful operations need to locate in undeveloped areas, which they may think this

area is but they are mistaken. This is an area of extreme growth and this permit, if allowed, would ruin the lives of thousands of residents trying to live a peaceful, rural lifestyle.

COMMENTS: I am opposed to air quality permit 165848 and requesting a "public meeting." As a member of NORTH SAN GABRIEL ALLIANCE, I firmly believe that there is great risk of air and water pollution from the hazardous chemical processing plant under development by Exflur Research Corporation on Williamson County Road 236. This pending Exflur Research Corporation location is surrounded by 150+ family residences, including historical farms, ranches, and homes, water recreation areas, agricultural lands, and wildlife conservation areas. The North Fork of the San Gabriel

River runs through the area, and downstream to Lake Georgetown and Lake Granger, then into the Brazos River and on to the Gulf of Mexico. The City of Georgetown and the City of Round Rock obtain drinking water from Lake Georgetown. Toxic chemical pollution from such a facility could permanently affect people, homes, land, and agriculture nearby, as well as downstream in the river drainages. Such a facility should not be located anywhere in the area of the North Fork of the San Gabriel River. This rural area is primarily residential, agricultural, and widely used for recreation activities. This is not an industrial area. I call upon the Texas Commission on Environmental Quality (TCEQ) to RESCIND its preliminary decision and DENY the draft air quality permit for the announced Exfluor Research Corporation chemical manufacturing facility on County Road 236.

COMMENTS: As a 20yr firefighter who has responded to numerous chemical leaks and as a FATHER, I am opposed to air quality permit 165848 and requesting a "public meeting." As a member of NORTH SAN GABRIEL ALLIANCE, I firmly believe that there is great risk of air and water pollution from the hazardous chemical processing plant under development by Exfluor Research Corporation on Williamson County Road 236. This pending Exfluor Research Corporation location is surrounded by 150+ family residences, including historical farms, ranches, and homes, water

recreation areas, agricultural lands, and wildlife conservation areas. The North Fork of the San Gabriel River runs through the area, and downstream to Lake Georgetown and Lake Granger, then into the Brazos River and on to the Gulf of Mexico. The City of Georgetown and the City of Round Rock obtain drinking water from Lake Georgetown. Toxic chemical pollution from such a facility could permanently affect people, homes, land, and agriculture nearby, as well as downstream in the river drainages. Such a facility should not be located anywhere in the area of the North Fork of the San Gabriel River. This rural area is primarily residential, agricultural, and widely used for recreation activities. This is not an industrial area. I call upon the Texas Commission on Environmental Quality (TCEQ) to RESCIND its preliminary decision and DENY the draft air quality permit for the announced Exfluor Research Corporation chemical manufacturing facility on County Road 236.

COMMENTS: Hydrogen fluoride is an extremely dangerous chemical - eats your skin, including tissue in your lungs. You cannot ever get it on your body or breathe it. Vapor inhaled can be fatal. One drop on your fingernail and you'll lose your nail. This should never be released into the air. This is DEADLY dangerous. Exfluor, by their own admission, will emit hydrogen fluoride if this plant is built. Robert F Harris Sr PhD. Retired Dow Chemical research scientist, organic chemistry. We don't want this chemical plant near our water or in our air. Sincerely, A concerned citizen

COMMENTS: We are land owners at Mesa Vista ranch off CR 201, not far from this potential site for Exflour. We are terrified of the long term ramifications from this company. The chemicals it will emit are not safe for the environment, ecosystem and our children. It will have lasting effects, that we will not know of for years to come. Please please please do not allow their permits for this location off of CR 236. Too much at stake and not worth the potential risk. Air, water and soil had the potential to be severely compromised. We need to keep Liberty Hill and it's residents safe! Thank you!

COMMENTS: Due to critical health and environmental concerns I urgently request that TCEQ take action to DENY Permit No. 165848, Exfluor Research, 1100 County Road 236, Florence, Williamson County, Texas, 76527, and if needed, I join the residents of the area requesting an in-person "public meeting" in the local County Road 236 area at a location to be determined. We live on the North Fork of the San Gabriel and our kids play in the water. The North Fork is the source of drinking water for Georgetown and Round Rock! What will you do WHEN there is a leak or spill. There is no reason to

approve this in an area next to private residents and the river! This plant should be placed in an industrial area. Thank you for reconsidering.

COMMENTS: The property we are building our new home on is located at 1017 River Ranch Rd. We back-up to the North San Gabriel just down stream from the proposed plant. My young children play in the river all the time. How is TCEQ preventing the risk of run off into the river or airborne contaminants settling in the river? Will there be any limitations on the quantities of each chemical that is on the property at one time so, when, not if, there is an accident or natural disaster there is at least an attempt to minimize the impact? The biggest thing I got out of the meeting last night,

was that these chemicals are way more dangerous than I realized. They talked at length about containment and buffer zones. How on earth does anyone think it is acceptable to allow a company to purchase property right in the middle of a community of homes and ranches and build and operate a facility that utilizes and gives off dangerous chemicals. This is unconscionable!!! Residents all over this area, work at great lengths with Texas Parks and Wildlife for the protection and conservation of our our natural resources and wildlife...and then TCEQ is going to allow something so potentially devastating to our environment because this company filled out their forms correctly? Common sense needs to prevail. This poses unnecessary risk, and Exfluor needs to be told to find a new location.

COMMENTS: Hello. Please revoke this permit as the chemicals they produce and the byproducts of that production are really nasty for our local environment. I say that because the vast majority of homes within several miles are all supplied by wells. Not to mention all of the livestock in the area that depend on the ground water. These companies have accidental spills, or dump "purified" water into waterways. It might not be tomorrow, or next year, but there will be problems down the line. Companies like this should be located in areas that are not populated or in industrial areas that

have containment and special clean up equipment for those unforeseen accidents. Please deny their ability to build in this area because we don't have the resources to mitigate accidents that come with these types of companies. Let me ask... would you feel comfortable raising children, livestock, gardens for food, or want to drink the ground water if you lived next to a chemical plant such as this? Probably not. And neither do we.

COMMENTS: I am opposed to air quality permit 165848 and requesting a "public meeting." As a member of NORTH SAN GABRIEL ALLIANCE, I firmly believe that there is great risk of air and water pollution from the hazardous chemical processing plant under development by Exfluror Research Corporation on Williamson County Road 236. This pending Exfluror Research Corporation location is surrounded by 150+ family residences, including historical farms, ranches, and homes, water recreation areas, agricultural lands, and wildlife conservation areas. The North Fork of the San Gabriel

River runs through the area, and downstream to Lake Georgetown and Lake Granger, then into the Brazos River and on to the Gulf of Mexico. The City of Georgetown and the City of Round Rock obtain drinking water from Lake Georgetown. Toxic chemical pollution from such a facility could permanently affect people, homes, land, and agriculture nearby, as well as downstream in the river drainages. Such a facility should not be located anywhere in the area of the North Fork of the San Gabriel River. This rural area is primarily residential, agricultural, and widely used for recreation activities. This is not an industrial area. I call upon the Texas Commission on Environmental Quality (TCEQ) to RESCIND its preliminary decision and DENY the draft air quality permit for the announced Exfluor Research Corporation chemical manufacturing facility on County Road 236.

COMMENTS: There are nesting bald eagles on the property near the site per news article.
https://kdhnews.com/news/local/we-ve-been-stewards-of-this-land-for-over-150-years-florence-family-not-happy/article_4292bd28-e8f0-11ec-86f8-07ecbf0aed52.html US fish and game The Bald and Golden Eagle Protection Act (16 U.S.C. 668-668c), enacted in 1940. Stated The Act defines "take" as "pursue, shoot, shoot at, poison, wound, kill, capture, trap, collect, molest or disturb." Regulations further define "disturb" as "to agitate or bother a bald or golden

eagle to a degree that causes, or is likely to cause, based on the best scientific information available, 1) injury to an eagle, 2) a decrease in its productivity, by substantially interfering with normal breeding, feeding, or sheltering behavior, or 3) nest abandonment, by substantially interfering with normal breeding, feeding, or sheltering behavior" (50 CFR 22.6). In addition to immediate impacts, this definition also covers effects that result from human-induced alterations initiated around a previously used nest site during a time when eagles are not present, if, upon the eagle's return, such alterations agitate or bother an eagle to a degree that interferes with or interrupts normal breeding, feeding, or sheltering habits, and causes injury, death or nest abandonment. This permit has to be denied.

COMMENTS: I am opposed to air quality permit 165848 and requesting a "public meeting." As a member of NORTH SAN GABRIEL ALLIANCE, I firmly believe that there is great risk of air and water pollution from the hazardous chemical processing plant under development by Exfluror Research Corporation on Williamson County Road 236. This pending Exfluror Research Corporation location is surrounded by 150+ family residences, including historical farms, ranches, and homes, water recreation areas, agricultural lands, and wildlife conservation areas. The North Fork of the San Gabriel

River runs through the area, and downstream to Lake Georgetown and Lake Granger, then into the Brazos River and on to the Gulf of Mexico. The City of Georgetown and the City of Round Rock obtain drinking water from Lake Georgetown. Toxic chemical pollution from such a facility could permanently affect people, homes, land, and agriculture nearby, as well as downstream in the river drainages. Such a facility should not be located anywhere in the area of the North Fork of the San Gabriel River. This rural area is primarily residential, agricultural, and widely used for recreation activities. This is not an industrial area. I call upon the Texas Commission on Environmental Quality (TCEQ) to RESCIND its preliminary decision and DENY the draft air quality permit for the announced Exfluor Research Corporation chemical manufacturing facility on County Road 236.

COMMENTS: I am opposed to air quality permit 165848 and requesting a "public meeting." As a member of NORTH SAN GABRIEL ALLIANCE, I firmly believe that there is great risk of air and water pollution from the hazardous chemical processing plant under development by Exflur Research Corporation on Williamson County Road 236. This pending Exflur Research Corporation location is surrounded by 150+ family residences, including historical farms, ranches, and homes, water recreation areas, agricultural lands, and wildlife conservation areas. The North Fork of the San Gabriel

River runs through the area, and downstream to Lake Georgetown and Lake Granger, then into the Brazos River and on to the Gulf of Mexico. The City of Georgetown and the City of Round Rock obtain drinking water from Lake Georgetown. Toxic chemical pollution from such a facility could permanently affect people, homes, land, and agriculture nearby, as well as downstream in the river drainages. Such a facility should not be located anywhere in the area of the North Fork of the San Gabriel River. This rural area is primarily residential, agricultural, and widely used for recreation activities. This is not an industrial area. I call upon the Texas Commission on Environmental Quality (TCEQ) to RESCIND its preliminary decision and DENY the draft air quality permit for the announced Exfluor Research Corporation chemical manufacturing facility on County Road 236.

COMMENTS: Dear Committee Member, I am against the permitting for this plant because no matter how many safeguards are promised, inevitably they fail causing harm. Look at Exflur's own history in keeping their own employees, not to mention the community safe from their toxic chemicals. I recognize this may seem just another "not in my back yard" plea, but there are areas available not near population centers available. Obviously price & convenience matter to the company, but they choose to make forever chemicals. Thank you for your consideration.

COMMENTS: Good morning, I implore you to not approve permit 165848. There have been too many negligent discharges at their company, and companies like theirs for us to risk our rivers and county underground water tables, let alone the families that are already living right next door to where the site is proposed! I understand Texas is attractive to businesses, but please let's not risk our future generations and current livestock business for the sake of EXFLUOR RESEARCH not having to pay more in real estate to be located in the existing industrial zones of our state.

COMMENTS: After attending the Exfluror Q&A at the proposed build site last week- it is evident and clear that they fully intend to skirt and avoid all liability and accountability. They are moving out to "the middle of nowhere" in order to avoid peering eyes and to avoid is getting caught when their facility leaks. They did not intend to allow the roundrock residents or neighbors to find out about the 2014 leak - the company next door called 911 when their employees could not breathe. Exfluror made every attempt to hide this leak and cover it up. It was leaking into the high school located

directly behind their plant. The lethal effects and final outcomes of their decision will likely not be seen for decades- they will get away with it as usual. As a local resident of the LH area - I do NOT consent to being slowly poisoned to death. I do not consent to Exfluor poisoning my child just so they can turn a less-regulated profit. You will not do this to our community.

The City of Georgetown and the City of Round Rock obtain drinking water from Lake Georgetown. Toxic chemical pollution from such a facility could permanently affect people, homes, land, and agriculture nearby, as well as downstream in the river drainages. Such a facility should not be located anywhere in the area of the North Fork of the San Gabriel River. This rural area is primarily residential, agricultural, and widely used for recreation activities. This is not an industrial area. I call upon the Texas Commission on Environmental Quality (TCEQ) to RESCIND its preliminary decision and DENY the draft air quality permit for the announced Exfluor Research Corporation chemical manufacturing facility on County Road 236.

COMMENTS: Good afternoon, I implore you to not approve permit 165848. There have been too many negligent discharges at their company, and companies like theirs for us to risk our rivers and county underground water tables, let alone the families that are already living right next door to where the site is proposed! I understand Texas is attractive to businesses, but please let's not risk our future generations and current livestock business for the sake of Exflour not having to pay more in real estate to be located in the existing industrial zones of our state. Regards, Calvin Tait

COMMENTS: I live within a stones throw of this proposed facility. Drainage from this facility would run through my property via a wet weather creek. I had a difficult time insuring my property because of the distance to a fire station and no hydrants in the area; a chemical plant should be closer to emergency services. I can't imagine a more inappropriate location for a chemical plant.

COMMENTS: we don't need or want toxic chemical pollution in our rural neighborhood or near the San Gabriel. This is a residential, farm, ranch, and agricultural area with a lot of natural native grassland and creeks. This is NOT the place for toxic gas manufacturing or research. Exflur"s application states their business is a specialty chemical manufacturing. And will "emit the following contaminants: hydrogen fluorides, carbon monoxide, hazardous air pollutants, nitrogen oxides, and organic compounds." !!!! Please help protect our county.

COMMENTS: At the TCEQ meeting at Florence High School on June 16, Exfluor's executives openly and clearly expressed their lack of concern for the health and safety of the community and natural environment surrounding the proposed building site for their facility. As an attendee of the meeting and a resident of the area (my home is on acreage only a few miles north of Florence off Hwy 195), I am opposed to air quality permit 165848 and requesting a "public meeting." As a member of NORTH SAN GABRIEL ALLIANCE, I firmly believe that there is great risk of air and water pollution from

the hazardous chemical processing plant under development by Exflor Research Corporation on Williamson County Road 236. COMMENTS: The potential impact of the Exfluor plant building, its business practices, the traffic of employees and mostly its toxic impact on the water and soil in Williamson County will be detrimental. They bought the property at the right time that they can sell and make a profit and go find another site that does not impact the above stated soil and water around this beautiful and fruitful area of Texas. The innocent land owners surrounding the site should not have to

live with the threat of cancer risk, toxic water, and depleted soil quality. Please refuse this permit and protect the land and people of Williamson County.

COMMENTS: My name is Susan Warhol and I live about a mile north of the proposed Exfluor Chemical Plant. I believe building this plant on County Road 236 would be detrimental to the area. One of my concerns is the response in case of a fire or an explosion. The fire departments that cover the Exfluor Chemical Plant are Andice Volunteer Fire Department and Florence Volunteer Fire Department. It is my understanding that at any one time there is only 2 full time fireman in these fire departments. The rest of the firemen are volunteer. None of these individuals have hazmat gear or training in

which you would need if there is a fire at the proposed plant. Also, for a hazmat team to be assembled it could be over an hour. How much toxic vapor could escape into the air in that period of time? Even if they could fight the fire with water there is no public water supply, The fire department would have to truck in water. Although Exfluor may have a water well, it must have electricity to pump water and I would assume that in case of a fire the power would be shut off. I know they plan to have safe guards to contain any chemical accident but as the old line goes... 'The Titanic was supposed to be unsinkable'. Thank you for your consideration.

COMMENTS: To Whom This May Concern- I implore you to NOT approve permit 165848. There have been too many negligent charges at this company, and companies like theirs for us to risk our rivers and county underground water tables, let alone the families that are already living right next door to where the site is proposed! I understand Texas is attractive to businesses, but please let's not risk our future generations and current livestock business for the sake of Exflour not having to pay more in real estate to be located in the existing industrial zones of our state.

COMMENTS: Given the poor previous performance of this company with regards to safety, and the incredibly near proximity of this to residential areas, it is absolutely irresponsible to consider allowing this permit. The duty of this office is protect the environmental quality and to serve the people - this does neither. Instead, you are supporting a company that obviously doesn't value environmental quality and you are completely ignoring the will of the residents in the nearby area who don't want this near their homes. It should be a no-brainer to decline allowing Exflur into the county.

COMMENTS: I am opposed to air quality permit 165848 and requesting "public meeting." As a member of NORTH SAN GABRIEL ALLIANCE, I firmly believe that there is great risk of air and water pollution from the hazardous chemical processing plant under development by Exflur Research Corporation on Williamson County Road 236. This pending Exflur Research Corporation location is surrounded by 150+ family residences, including historical farms, ranches, and homes, water recreation areas, agricultural lands, and wildlife conservation areas. The North Fork of the San Gabriel

River runs through the area, and downstream to Lake Georgetown and Lake Granger, then into the Brazos River and on to the Gulf of Mexico. The City of Georgetown and the City of Round Rock obtain drinking water from Lake Georgetown. Toxic chemical pollution from such a facility could permanently affect people, homes, land, and agriculture nearby, as well as downstream in the river drainages. Such a facility should not be located anywhere in the area of the North Fork of the San Gabriel River. This rural area is primarily residential, agricultural, and widely used for recreation activities. This is not an industrial area. I call upon the Texas Commission on Environmental Quality (TCEQ) to RESCIND its preliminary decision and DENY the draft air quality permit for the announced Exfluor Research Corporation chemical manufacturing facility on County Road 236.

COMMENTS: This is not the place for a chemical plant for all the reasons previously submitted, including but not limited to: proximity to private residences and historic ranches, proximity to rivers, creeks, springs, lakes, wells, drinking water watershed, natural beauty of this rural area, lack of nearby emergency services to respond to a chemical plant release or emergency, including medical, fire, and haz-mat responders and services. This idea and plan makes no sense whatsoever and should be stopped and the plant relocated to an industrial area more suitable to this type of operation. Take some

time off and drive around this area and you will agree that a chemical plant located here is insane. Why isn't our government protecting the local public from such an irresponsible idea and plan?

COMMENTS: "Fluorine-carbon bonds in PFAS are very tough chemical bonds to destroy and I am concerned that Exflur may emit unburned PFAS compounds along with Hydrogen Fluoride (HF) which is an extremely toxic substance by itself. It appears that HF will not be continuously monitored (Exflur could install HF CEMS) and, in my opinion, the only truly safe level is zero. HF emissions could impact local vegetation, animals, and more leaving trace residues. In my view, Exflur's new plant should not be built due to the risk of Thermal Oxidizers failing to destroy the fluorine-carbon bonds,

and HF and other toxic chemicals escaping and turning the surrounding community into a chemical industry sacrifice zone. I would encourage Exfluor to either expand its current Round Rock plant or look for another site in an industrial park."

COMMENTS: I am opposed to air quality permit 165848 and requesting a "public meeting." As a member of NORTH SAN GABRIEL ALLIANCE, I firmly believe that there is great risk of air and water pollution from the hazardous chemical processing plant under development by Exflur Research Corporation on Williamson County Road 236. This pending Exflur Research Corporation location is surrounded by 150+ family residences, including historical farms, ranches, and homes, water recreation areas, agricultural lands, and wildlife conservation areas. The North Fork of the San Gabriel

River runs through the area, and downstream to Lake Georgetown and Lake Granger, then into the Brazos River and on to the Gulf of Mexico. The City of Georgetown and the City of Round Rock obtain drinking water from Lake Georgetown. Toxic chemical pollution from such a facility could permanently affect people, homes, land, and agriculture nearby, as well as downstream in the river drainages. Such a facility should not be located anywhere in the area of the North Fork of the San Gabriel River. This rural area is primarily residential, agricultural, and widely used for recreation activities. This is not an industrial area. I call upon the Texas Commission on Environmental Quality (TCEQ) to RESCIND its preliminary decision and DENY the draft air quality permit for the announced Exfluor Research Corporation chemical manufacturing facility on County Road 236.
