COMMENTS: I can assure you that not many people want the lake and the Guadalupe River contaminated. I'm right on the River and several of these creeks. We prefer to leave water ways and wildlife alone. We also do not want yet another subdivision in our area, it pollutes, causes over population and takes away from our water sources, which we are told to conserve This permit does not conserve water, waterways nor wildlife. I am voting NO on this permit.

Subject: Permit #WQ0016052001

As discussed, here are my comments regarding this permit request:

Having lived in Comal County within a stone's throw of the Guadalupe River for over 24 years, I find it appalling that this request to dump treated sewage into the Guadalupe River is even being considered. With the growth in Comal County, approving this request can set a precedent that we will all live to regret--developers cutting corners and saving money for themselves by not being required to install individual septic tanks at homes they build. It is also putting sewage into a recreational waterway where thousands of citizens go to relax in summer.

Count me as a citizen who strongly opposes this!

It may go down a dry creek.
What about the many springs under
ground? Rebecca Creek still has water now
because of our springs.

Please give this form to the person at the information table. Thank you.

COMMENTS: The Canyon Lake Corp of Engineers should not allow this dumping of (treated) wastewater. This can also potentially harm aquatic life (in addition to land wildlife)and birds that depend on the lake for food. What if this "treatment plant" experiences a defect or a breakdown??? The untreated household waste and filth will be dumped into our beautiful lake-over 200,000 gallons a day!!! WE STRONGLY OPPOSE THIS RIDICULOUS, HORRIBLE AND DISGUSTING PERMIT!!! THIS IS WHY MOST OF US HAVE A SEPTIC TANK!!

COMMENTS: This is disgusting. As an advocate for keeping this area limited to the developmental boom, I hope many other long time locals will realize and address the problems to come with this outrageous growth, especially effecting our water. We are already in danger why are we allowing things that add to the problems???? This breaks my heart. I already see so many of the problems going on as I'm constantly out on the lack and river and have been for decades.

Comal county needs to get their act together about the Guadeloupe both north and south! Go watch the film "deep in the heart"

This question goes to motive of getting the discharge permit approved. & would like to know

- who has SWTX, its subsidiaries, its owners, or other companies owned by those owners donated to? Politically? to

= Have any of the parties above agreed to any community projects? If so, which politicians/representatives are running those projects?

RECEIVED

AUG 1 2022

AT PUBLIC MEETING

- Who are the financial beneficiaries of this plant? of the discharge permit?

- can residential septic companies unload at this location?

= should a catastrophe occur who will indemnify the public for repair efforts?

- how much are the company and owners insured for in such an event?

Who ensures these limits are kept?

= what is the ~~max~~ max expected loss in case of catastrophe?

= Has the agency that enforces these facilities ever missed or delayed an inspection?

= Is the agency that inspect these facilities fully staffed?

FOR TPDES PERMIT FOR MUNICIPAL WASTEWATER
NEW PERMIT NO. WQ0016052001

APPLICATION. SJWTX, Inc. and Mary Jane Cielencki, P.O. Box 1742, Canyon Lake,
Texas

78133, has applied to the Texas Commission on Environmental Quality (TCEQ) for
new Texas

Pollutant Discharge Elimination System (TPDES) Permit No. WQ0016052001, to
aut

RECEIVED

AUG 11 2022

AP

AT PUBLIC MEETING

Opposition to this wastewater permit:

Just because Spring Branch is unincorporated does not mean anyone should be
allowed to contaminate our local creeks and river.

I live on Rebecca Creek and the noise + traffic hazard & pollution.
Contaminants and toxins in the water such as BPA, pharmaceuticals, illegal drugs is a
such as fentanyl and meth could be flushed down the toilet and sinks from illegal major
meth labs. The criminal illegal border crossings and cartel could use this area to problem
set up meth labs and dump chemicals into our creeks and rivers. It is already already
illegal to contaminate the Edwards Aquifer.

We do not ~~want~~ want sewage pipes going through our
Also increasing crime and taxing our limited law enforcement capabilities Subdivision.
Where is the water to supply these 700+ homes?
These companies have a tendency to strip every tree down
From Barton Creek Association (SBCA) and have a tendency.

Hill Country creeks are some of the purest and lowest nutrient water bodies in
Texas. In certain areas, water from the land and creeks makes its way into the
Edwards Aquifer. This aquifer recharges quickly and is extremely sensitive to
water pollution. The same polluted water from land or creek will return to natural
springs and people's wells.

Wastewater effluent (the product from a wastewater treatment plant) has
undergone some treatment, but is not treated to drinking water standards and is
not nearly clean enough to be dumped safely into our creeks. This effluent water

* contains high levels of nutrients (nitrogen and phosphorous) which cause algae blooms. These algae blooms are not only unsightly but through decomposition take up oxygen in the waterbody. The waterway may become hypoxic, causing fish and other aquatic life to perish. Algae also restricts light moving into the lower portions of the creek, altering habitat. These effects can reduce biodiversity even when a creek is not completely devoid of oxygen. At high levels, nitrogen is unsafe in drinking water, restricting transport of oxygen in the blood. This is especially dangerous for babies and young livestock. [1] Additionally, effluent water contains metals, pharmaceuticals, and many other chemicals from cleaning and body care products.[2] The full effects of these products are not yet known.

* These plant will not filter these toxins and chemicals like hormone disruptors such as BPA, birth control etc
[1] USGS Service, <https://water.usgs.gov/edu/nitrogen.html> what about the sludge that will put wear + tear on our roads?
[2] www.aquiferalliance.net/Library/GEAAPublications/GlenroseEdwardsWastewaterReport20111103.pdf

Alternatives

Land application and beneficial reuse are two large scale alternatives to direct discharge of wastewater effluent available with the state permitting agency, the Texas Environmental Commission on Environmental Quality (TCEQ), (TCEQ) are land application and beneficial reuse. In addition, there are other small scale alternatives including septic systems and newer decentralized technologies. Land application simply means spraying wastewater effluent over a dedicated irrigation field and allowing soil and plants to treat the effluent while beneficial reuse uses effluent for landscaping, such as medians. For small scale alternatives, developments can use septic systems and newer decentralized technologies.

Sulfur smell from the sewage plant. Once this project gets approved the rest of developers will follow with more permits and sewage projects and our tranquil way of life will cease to exist.

Historically there is a lack of accountability and integrity in this country. It seems like the love of money is indeed the root of all evils.

Who can guarantee that the sewage plant facility will indeed manage it properly greedy investors and developers without care for our safety will dump toxic cancer causing chemicals into our creeks and Guadalupe river including the Edwards Aquifer.

Other
Other
Other

Other pollution

Noise and traffic pollution. Roads and vehicle oil run off and breakdown of roads and bridges adding more expense to our unincorporated area. Will taxed law enforcement and bring more crime and crowded traffic congestion.

Other:
will these homes be used to house illegals?

This could happen in Spring Branch also.

Texas Beaches Have Unsafe Levels of Fecal Bacteria, Report Finds

BY BENJAMIN FEARNOW ON 7/6/21 AT 1:13 PM EDT

At least five beaches from Galveston to Corpus Christi had more potentially "unsafe" contamination days in 2020 than safe ones. About 10 beaches that were tested along the Gulf, and a few, including the Houston area's Trinity Bay, recorded between 45 and 60 percent "unsafe" days last year.

"There are signs here about lifeguards and rip currents, but there is nothing about poop in the water...this beach and several others didn't do very well," CBS DFW reporter Jacob Rascon said in a Monday report that highlighted the Environment America data.

Other states with beaches that showed an usually high concentration of fecal matter included Louisiana, Maine, Mississippi, Ohio and Oregon.

Rumper said an improvement to water infrastructure is needed because developers and urban sprawl has "paved over so much of the landscape that when we have heavy rains, the water has nowhere to go. That heavy rain is picking up bacteria, grease, oil, toxic chemicals and sweeping it all off into the sewage system, causing an overflow."

Newsweek reached out to Texas state park and health officials for additional remarks about the beach contamination report Tuesday afternoon.

Please Do not approve this Pollutant
Discharge Elimination System Permit

COMMENTS: Canyon Lake Water is asking to build a sewer plant for a housing project that will have 718 town homes on 4,000 square foot lots and a 31 acre business park all on 200 acres in Spring Branch. The discharge from this plant will be 260,000 gallons of waste water per day dumped into Cypress Creek which will discharge into the Guadalupe river. TCEQ decisions to allow sewage to flow into our rivers, quarries and batch plants to pollute our air and threaten our aquifers, destroy our beautiful scenery, push our wildlife out of existence by destroying living & breeding areas.

Have TCEQ members been swayed by lobbyists for big corporations & organizations? From where concerned citizens are sitting, it all looks like Texas citizens are tolerated -- in contrast to corporations that put organized pressure on them to approve their plans. They are allowing the systematic destruction of Texas land, water, air - the exact opposite of their charter. Where is the water and infrastructure available for such a large group of residence to live? Rebecca Creek Rd is already traveled enough. This needs to be stopped until an environmental analysis is done and public is able to voice their opinion. Thank you

Re: Comments and Meeting Request Regarding Application of SJWTX Inc. and Mary Jane Cielencki for TPDES Permit No. WQ0016052001

Please accept the attached comments on behalf of the fifty-four member groups of the Greater Edwards Aquifer Alliance

1. Background. SJWTX, Inc. and Mary Jane Cielencki, P.O. Box 1742, Canyon Lake, Texas 78133, has applied to the Texas Commission on Environmental Quality (TCEQ) for a new Texas Pollutant Discharge Elimination System (TPDES) Permit No. WQ0016052001, to authorize the discharge of treated domestic wastewater at a daily average flow not to exceed 260,000 gallons per day. The facility will be located approximately 0.25 miles northwest of the intersection of Rebecca Creek Road and U.S. Highway 281 North, in Comal County, Texas 78070. The discharge route will be from the plant site via pipe to Cypress Creek, thence to the Guadalupe River Above Canyon Lake in Segment No. 1806 of the Guadalupe River Basin.

2. Greater Edwards Aquifer Alliance (GEAA). GEAA submits the following comments on behalf of our fifty-four member organizations and requests a public meeting regarding this permit application. GEAA is a 501(c)(3) nonprofit organization that promotes effective broad-based advocacy for the protection and preservation of the Edwards Aquifer, its springs, watersheds, and the Texas Hill Country that sustains it. GEAA has multiple members who would be adversely affected by the proposed application of SJWTX, Inc. and Mary Jane Cielencki.

GEAA's members have serious concerns regarding the permit application and regarding the degradation to Cypress Creek and the Guadalupe River Above Canyon Lake that will likely occur with the discharge of treated sewage into these waterways. GEAA and its members' specific areas of concern are summarized in the following section of this letter.

3. Comments on the application. As noted in the Notice of Receipt/Intent and the Intent to Obtain Permit, the proposed discharge route is from the plant site via pipe to Cypress Creek, thence to the Guadalupe River Above Canyon Lake. There are several areas of concern with the current application:

Levels: The effluent discharge levels in the draft application currently depict a effluent discharge levels as construction of the Simmons Valley WWTP occurs, with

the applicant requesting effluent discharge level limits of 5 mg/l carbonaceous biochemical oxygen demand (CBOD₅), 5 mg/l total suspended solids (TSS), 2 mg/l ammonia-nitrogen (NH₃-N), and an unknown mg/l amount for total phosphorus (TP). Phosphorus is a "limiting nutrient" in ecosystems, meaning the quantity of this nutrient controls the pace of algal and aquatic plant production. However, excess quantities of phosphorus, even in small amounts, can lead to eutrophication and harmful algal growth in a waterbody. **GEAA strongly encourages the adoption of a Total Phosphorus limit of .50mg/l, bringing the effluent discharge level to a 5mg/l CBOD₅, 5mg/l TSS, 2 mg/l NH₃-N, and .50 mg/l TP maximum effluent discharge limit.**

b. Implementation of Beneficial Reuse: As it stands today, the Simmons Valley WWTP application does not include any capacity to conduct beneficial reuse, promoting environmental harm to Cypress Creek, Guadalupe River above Canyon Lake, and the surrounding watershed areas. Accordingly, GEAA urges SJWTX Inc. and Mary Jane Cielencki to utilize a "One Water" approach for their wastewater treatment system, incorporating beneficial reuse of effluent, thereby eliminating the need to discharge effluent into Cypress Creek. In the event SJWTX Inc. and Mary Jane Cielencki are unable to reuse all the wastewater generated, it is GEAA's recommendation that the remaining amounts be land applied, with SJWTX Inc. and Mary Jane Cielencki purchasing the necessary land for such and obtaining the requisite TLAP permit from TCEQ.

During a March 8, 2022, Spring Branch City Commissioner's meeting, the applicant expressed intent to investigate Title 30 Texas Administrative Code, Chapter 210 Reclaimed Water use at Jumbo Evans Sports Park located at 101 Jumbo Evans Blvd, Spring Branch, TX 78070. Jumbo Evans Sports Park is located less than 2 miles away from the proposed Simmons Valley WWTP and would benefit from municipal reclaimed water use for irrigation of its athletic fields and other parklands. **GEAA urges the applicant to incorporate Title 30 Texas Administrative Code, Chapter 210 Reclaimed Water use into its current application.**

The TCEQ has previously stated that in evaluating wastewater permits, they consider baseline conditions in the receiving stream, the physical and the hydrological characteristics of the stream, waterbody uses, and the associated water quality standards that protect those uses. We trust that the TCEQ will consider the stated factors when examining the SJWTX, Inc. and Mary Jane Cielencki application and will adopt standards that are in line with others in Central Texas.

Thank you for the opportunity to submit these comments.

Sincerely,

Annalisa Peace
Executive Director
Greater Edwards Aquifer Alliance

COMMENTS: I strongly oppose the proposed Simmons Valley Wastewater Treatment Facility because of the negative environmental impact it will have on the residents, marine life and animal populations in and around FM 306 and 281, and the entire Canyon Lake area. DON'T MESS WITH TEXAS !! and especially DON'T MESS WITH THE TEXAS HILL COUNTRY surrounding our beautiful serene river and lake. Water is already being taken OUT of Canyon Lake and now we are threatened with tainted water being released INTO the lake. The permit applicants undoubtedly are aware that

Canyon Lake is suffering from the invasion of Hydrilla causing altered PH levels and the reduction of oxygen affecting the fish population and negatively affecting native plants. The location of the proposed wastewater treatment plant will further negatively affect the ecological systems currently under attack. The release of offensive odors of a WWTF is inevitable and unacceptable at the proposed building site. Alternative options are available to Lennar Homes which it should and must utilize. For the foregoing reasons, plus the additional reasons voiced by other opponents, the proposed permit MUST respectfully be DENIED.

ED makes decision (Executive Director - Toby —) ? Director of what?

Why are they wanting this on the ~~spot~~ upstream portion of the Lake - huge recreational area at risk?

What are the safeguards to prevent contaminated water from entering creek/river?

What is the description of the water quality that will exit treatment?

What will the facility look like? Open tanks?

How will the treatment facility impact air quality, insect populations? Wildlife?

Will this be the start of urbanization of this area?

COMMENTS: I strongly oppose granting permit WQ0016052001 for the discharge of domestic waste water by the proposed Simmons Valley WWTF because of the negative environmental impact associated with this discharge and the severe health and economic consequences that will result. The Canyon Lake ecosystem is already severely stressed to the detriment of the area residents, animals, and marine life. The proposed discharge of an additional 260,000 gal/day of wastewater into this already challenged system is incompatible with the primary contact recreation, public water

supply, aquifer protection, and exceptional aquatic life designated uses for this Sector. The current economy as well as further economic development are primarily tied to the Canyon Lake ecosystem. To jeopardize the health and economic well being of many, to benefit one entity is not consistent with the values held by our citizens nor is it consistent with the mission of the TCEQ. Furthermore the "no degradation" claims are not credible given that there is currently visible degradation on-going (invasive plant species, reduction of fish populations as revealed by Texas Parks and Wildlife) and at the very least require further study and public disclosure of the scientific basis for these claims before any further decision making on this application. Due to these objections and the objections raised by others, I firmly urge the TCEQ to deny this application and to encourage the applicants to seek more public interest oriented and sustainable engineered solutions. Thank you.

COMMENTS: My family & I have lived in Spring Branch for over 30 yrs, we truly have & hope to continue using our lake & rivers, our concern and question is if we as home owners were enforced to install our own septic system why can Lenox do the same instead of dumping into our natural river and it don't honestly believe that it will be safe. If it was safe why have we had to install septic system. I honestly don't think this is safe, also if you allow any builder this type of access before you know it they will add more homes or other unsafe waste. Also allowing one builder you are opening

for other builders to do the same. This is a very sad situation should not even be on a agenda/meeting no thanks to our lobbyist. I pray that this it will not pass. Thanks

COMMENTS: The permit application states the effluent from the facility will be conveyed through a 6" pipe to a discharge point along Cypress Creek; thence to the Guadalupe River above Canyon Lake in Segment 1806 of the Guadalupe River Basin. Like many residents in this part of the Hill Country, I enjoy tubing and recreation on the Guadalupe above Canyon Lake between Nichol's Landing and the 311 bridge and Rebecca Creek crossing. Also, my

drinking water comes from Canyon Lake. The Guadalupe River above Canyon Lake in Segment 1806, and, ultimately Canyon Lake where the water collects in a reservoir all are categorized as follows per Title 30 Texas Administrative Code Section 307 - Texas Surface Water Quality Standards: primary contact recreation, public water supply, aquifer protection and exceptional aquatic life use. Why was the decision made to only conduct a Tier 1 antidegradation review? As someone who's health and safety may be affected by the granting of a permit due to my recreational use of the river due to primary contact, I would like to request a contested hearing. There are restrictions that apply to these waterways that would be modeled with a two-tiered EPA-required anti-degradation policy and the Clean Water Act Code of Federal Regulation Section 131.12 and Title 30 Texas Admin Code Section 307.5. Did TCEQ modeling include the requirements that apply to the Guadalupe River past the confluence of Cypress Creek and Canyon Lake? What values were evaluated in the modeling? Was stormwater drainage of the area also factored in the calculations and/or will future requests for permits be considered in future applications that outfall in this same area? Given these categories that apply to Section 1806, should the following be studied? Toxicity limits in accordance with Title 30 T.A.C Section 307 acute and chronic toxic criteria to protect aquatic life and human health. Will there be testing of radioactivity associated with dissolved minerals to ensure they do not exceed levels established by drinking water standards as specified in Title 30 T.A.C. Chapter 290? How will phosphorus levels that are usually low in Hill Country waterways changed based on this permit being granted? Chapter 307 of the Texas Surface Water Quality Standards Appendix A provides the following discharge limitations which conflict with those outlined in the preliminary decision for Section 1806: pH range: TSWQS=6.5-9 vs. preliminary decision= 6.0-9.0 Dissolved oxygen: TSWQS= 6.0 mg/L vs. preliminary decision=4.0 mg/l Requirements not listed in the preliminary decision include chloride, sulfates, total dissolved solids, chlorophyll and temperature. Section 1806 is also categorized as a Public Water Supply and should be subject to Title 30 Chapter 290 Subchapter D Rules for public drinking water. Do you know what the effects of the public water supply in Canyon Lake will be? The proposed facility is also located within the Edwards Aquifer Contributing Zone and should be subject to Title 30 Texas Admin Code Part 1 Chapter 213 Subchapter B. Can you please confirm a Contributing Zone plan has been submitted to the Executive Director for review? If so, when will a copy be made available to the public, and if not, when will the plan be submitted? I would like to understand how the applicants plan to mitigate the variances between what was submitted in the Permit Application and the Statement of Basis/Technical Summary And Executive Director's Preliminary Decision. Interim Phase I list a 2hr peak flow at .240 MGD (equal to 200 gpm) on the permit application but the requirements listed in the Statement of Basis/Technical Summary and Executive Director's Preliminary Decision list the effluent limitations as 167 gpm avg discharge during any 2 hour period. The permit application also lists Phase II at .6 MGD (equal to 500 gpm) for the 2-hr peak, but the requirements state the limit at 417 gpm. A public notice was required to be published in Spanish based on the permit application. Can you please provide a copy of the translated notice, as well as information on where it was published?

COMMENTS: This is the dumbest thing we could ever do for our future in Texas. This'll feed sewage directly upstream from my Waterwell. My well has been providing safe water for over 50 years. Don't expect me or my neighbors to ask for millions of gallons of sewage to be dumped upstream from us. We bought our homes on a clean water source, now that new land developers have discovered Paradise they want to make a huge profit and ruin a wonderful part of Texas.

Before they just move on. Words cannot express the sinking feeling. I am getting. Thanks for paying attention. Thomas Mote

COMMENTS: What controls would be in place to ensure that the pollutants in the waste water will not affect the wildlife? What remediation will there be if the waste water ends up being too much (capacity-wise) for the area? How will this waste water affect the rest of the ecological system?

It is my understanding that the Cypress Cove and Rebecca Creek subdivisions have their own small water service providers that take their drinking / use water directly from the creek & river ^{in which proposed discharge will flow.} What is being done to test the water quality and protect the home owners and residents of that area?

COMMENTS: My concern is not only with the additional treated water planned to be discharged into the river. I have a bigger concern with water availability from the utility (Canyon Lake Water Service Company). We already start and end the year with restrictions due to limited capacity. Adding more houses, especially 700 more, would severely strain and already strained utility. Drinking water will be negatively impacted not only by treated water discharge, but also by adding more houses/users than the water service company can keep up with. Both strain our environment.

RE: Water Quality Permit # WQ0016052001

Quality
RECEIVED

AUG 11 2022

AT PUBLIC MEETING

This is a request for the relevant Water Management company to ~~the~~ make public & clear what their plans are in regards to ongoing filtration of pesticides/insecticides and medications from the water that is collected from the planned development. Specifically what actions do they take as a company to support legislation requiring more extensive filtration/treatment & what they do to support public awareness of ways to lessen the chemical load that ends up in the treatment plant

ie: Wash dogs outside as opposed to in tubs.

I also request that the TCEQ let us know what we can do to make insecticide testing a routine and affordable part of the testing at the relevant water treatment plant so that our community remains as safe as possible.

COMMENTS: Dear Office of the Chief Clerk, TCEQ, As you may already know, sources of water in Texas are invaluable. The idea of discharging treated waste water into the beautiful Guadalupe River is unbelievable. It has been proven in the past that this is not the best option. In 2019, almost the same amount of waste water had been discharged daily into the nearby Blanco River. Algae blooms developed and the flora and fauna was harmed. No matter how "clean" the water was processed, it still contained phosphorus and nitrates. Since the discharge was stopped, the Blanco is now running

clear. Water quality, aquifer protection, and our aquatic species, including our state fish, the Guadalupe Bass, will be compromised if the permit for discharge into any tributary is granted. Our area is a desirable recreational destination, due to the Guadalupe. Developing a subdivision provides needed housing, but fitting 700+ homes on 4000 sq ft lots is greed. The developer should consider larger lots to accommodate aerobic septics, as many of us have in Hill Country. Building a treatment plant that reuses gray water on the surrounding areas, letting the vegetation absorb and filter, would be a better alternative. Our Bulverde/Spring Branch Communities are doing just that, keeping the vegetation green with gray water and keeping the discharge out of our local water systems. Your consideration in this matter is appreciated. Respectfully yours, Jennifer Powell

AT PUBLIC MEETING

My name is Irene Renfro and my address is 251 Landons Way, Spring Branch, Texas 78070. Our property includes Cypress Creek which is a natural drainage area. When we have heavy rain this area becomes a raging river that flows over the road at the entrance of our neighborhood and very close to the bottom of the bridge further in. We have been flooded both in and out of our neighborhood several times with 6 to 8 inches of water flowing. The sheriffs office personnel come and block the road until the water recedes.

The proposed waste water flow into Cypress Creek will increase the flow rate during heavy rain increasing the flow through my property and across the road where it floods naturally. This rocky gorge is normally dry and has a spring at the back of my property. There are several large, mature cypress trees that grow near that spring. The wildlife and cows that roam on the adjacent property drink from that spring daily. White tail deer, Axis deer, fox, wild pigs, lost cats and dogs and even the feral cat community drink from that spring. *X photos attached before and after rain.*

I do not want waste water running through my property and collecting in that spring. I also don't want waste water flowing into the Guadalupe River. The river is a precious commodity. People utilize it for recreation. Fishing, boating, swimming, and even camping on the banks to name a few. Our children swim in this river. There are enough water issues out here. Our ground water is a precious thing to those of us who live here and polluting it with waste water should never be considered.

It is my opinion that this is about money. People move to the hill country to get away from urban sprawl. We don't want this mini home community. I have seen the one in Fredericksburg and I say no thank you.

I propose that the new community treat this water and keep it for use in their landscaping rather than pollute the properties and precious river.

Respectfully and sincerely,

Irene M Renfro

RE: Comments on the Application and Draft Permit of SJWTX Inc. and Mary Jane Cielencki, for Proposed TPDES Permit No. WQ0016052001.

Dear Ms. Gharis:

These comments are submitted on behalf of the Save Our Springs Alliance (SOS) regarding the Application and Draft Permit of SJWTX Inc. and Mary Jane Cielencki, for proposed TPDES Permit No. WQ0016052001.

SJWTX Inc. and Mary Jane Cielencki, (“the Applicants”) have applied for a new discharge permit, proposed TPDES Permit No. WQ0016052001 (“the Draft Permit”), to authorize wastewater discharge at a volume not to exceed 260,000 gallons per day (gpd) in the final stage. The permit would allow the discharge of treated effluent into Cypress Creek thence to the Guadalupe River Above Canyon Lake in Segment No. 1806 of the Guadalupe Basin.

SOS is a non-profit organization that works to protect the Edwards Aquifer and the natural and cultural heritage of the Texas Hill Country region and its watersheds. SOS routinely works to ensure that wastewater effluent does not harm pristine Texas Hill Country streams and has engaged in research documenting the harms posed by the discharge of wastewater into such streams.

SOS has several concerns about the application for WQ0016052001 and its impacts on the waterways that SOS works to protect including: (1) the level of total phosphorus proposed for the wastewater effluent in the application; (2) the need for a limit on total nitrogen; and (3) the failure to include any provisions for re-use of wastewater.

1. TPDES Permit No. WQ0016052001 must contain a more stringent level on total phosphorus.

The harms of phosphorus enrichment in aquatic ecosystems are well documented and include impacts such as increased algal growth, proliferation of cyanotoxins, and increased murkiness in water. U.S. ENVIRONMENTAL PROTECTION AGENCY, A COMPILATION OF COST DATA ASSOCIATED WITH THE IMPACTS AND CONTROL OF NUTRIENT POLLUTION (2015).¹ And rigorous scientific studies of Texas Hill Country streams, streams like the receiving waters for WQ0016052001,

¹ U.S. Environmental Protection Agency, *Indicators: Phosphorus*, <https://www.epa.gov/national-aquatic-resource-surveys/indicators-phosphorus>; USGS, *Phosphorus and Water*, <https://www.usgs.gov/special-topics/water-science-school/science/phosphorus-and-water>.

have shown that total phosphorus levels must be kept below to .02 mg/L in order to avoid nuisance algae growth.²

Despite the documented dangers of high concentrations of total phosphorus in wastewater effluent in Texas Hill Country streams, particularly those with low or now flow during large portions of the year, the Draft Permit contains a total phosphorus limit of .5 mg/L for all stages of the Draft Permit. This level far exceeds the total phosphorus concentrations that have been demonstrated to cause violations of applicable Tier 1 and 2 antidegradation regulations and Texas Surface Water Quality Standards. 30 T.A.C. §307.5; 30 T.A.C. §307.4(e) (“[n]utrients from permitted discharges or other controllable sources must not cause excessive growth of aquatic vegetation that impairs an existing, designated, presumed, or attainable use”). In order for the permit to comply with applicable rules, avoid harming wildlife and human health, and avoid impairing current uses and degrading water quality, SOS requests that the total phosphorus limit for TPDES Permit No. WQ0016052001 be set at the background total phosphorus concentrations of the receiving waters, or at least no higher than .02 mg/L.

2. TPDES Permit No. WQ0016052001 must contain a limit on total nitrogen.

TPDES Permit No. WQ0016052001 should include a limit on total nitrogen to adequately protect against adverse ecological and human health effects. While the Draft Permit has a limit on ammonia nitrogen, studies show that this is not an effective surrogate for controlling other forms of nitrogen in wastewater, including nitrates. Exposure to certain forms of nitrogen in wastewater, such as nitrates, can lead to a potentially fatal condition in infants known as blue baby syndrome in humans, and exposure to nitrates in livestock and wildlife can lead to nitrate toxicity. Moreover, the EPA has set maximum contaminant levels for nitrates in drinking water at 10 mg/L. Although potable water suppliers are responsible for treating drinking water to the applicable standards, recreational users of the receiving waters, including the Guadalupe River, may ingest raw water unintentionally or humans and livestock might be exposed by drinking water from groundwater wells drawn from alluvial aquifers. Thus, a limit on total nitrogen is needed to adequately protect human health and the health of wildlife and livestock.

3. TPDES Permit No. WQ0016052001 should include provisions requiring re-use of wastewater.

SOS encourages the Applicants and TCEQ to include provisions requiring beneficial re-use of treated wastewater to lessen the impact on the receiving waters. In fact, setting more stringent treatment standards, as SOS has requested, would support the inclusion of a re-use provision in the permit. The higher quality treated wastewater can be sold for irrigation or industry, making it a valuable commodity for the Applicants. For example, treated wastewater can be reused in landscape irrigation, gray water systems, and cooling towers, and presents a much better option than groundwater for these purposes. There are many other uses for good quality treated wastewater, uses that are better than polluting the receiving waters. With water prices

² Bioassessment of Four Hill Country Streams Threatened by Proposed Municipal Wastewater Discharges; PowerPoint Presentation on Nutrient Pollution in the Blanco River: https://wimberleywatershed.org/wp-content/uploads/2020/08/KingRS_BlancoCityCouncil_Public_Comment_Aug_2020.pdf; Presentation on Nutrient Pollution: <https://www.youtube.com/watch?v=abxeLoBTaLA>.

skyrocketing and demand for water rising steeply, including a reuse provision in the permit would be a win-win to meet the growing demand for treated wastewater and lessen the impacts of wastewater pollution in the receiving waters.

For the above reasons, SOS opposes the proposed TPDES Permit No. WQ0016052001 and asks that TCEQ require more stringent pollution parameters and require as much reuse of wastewater as possible in order to protect the receiving waters, wildlife, and human health.

Thank you for considering SOS's comments.

Sincerely,

Victoria Rose

on back

Please give this form to the person at the information table. Thank you.

What has become clear in this meeting is that it is evident this development will negatively affect our community, and no one wants to be open about it or take responsibility. The evidence of how negatively pesticides, prescription meds, etc... affect the environment is undisputable. That alone is enough not to proceed with this. But in an area with frequent droughts, it is unforgivable to stress our water system even further. Enough passing the buck. You have a responsibility to do what's RIGHT. Please stop this. Trading our lives to fill your pocketbooks is unforgivable. And one final thing - I have lived in a community where people were sick from the water. There was hardly a household amongst those I knew where someone wasn't sick. I know from experience that the pretend scientific explanations are a bunch of balogna. What you are trying to do is not safe.

COMMENTS: Do not allow this permit! It is not environmentally safe. We don't want our creeks and lakes to be polluted. The permit would allow too many people on the amount of acreage. Additionally, the draw on our water resource would add more strain on our water. Enough already. Protect the people already here.

COMMENTS: We do not want any treated waste water emptied into our great and valuable natural water system. If you put this proposed permit up for a vote with all surrounding neighbors it would be voted out by 100%. Water is an invaluable resource for our drinking water and we should not take any risks of a catastrophic error that would risk the safety of our water. Either this development should not be allowed or find other alternatives for this development.

COMMENTS: Concerns: While the treatment plant kills bacteria and virus, it would seem to perhaps not filter out flushed remainders of prescription or non-prescription drugs into the system. Secondly, and perhaps more major, it appears this facility is submitted specifically to create a scenario for Lennar to maximize profits by building houses on some of the tiniest lots in The Hill Country. Without the facility, lots would need to be larger with individual septic systems. This ultra dense housing results in higher population density and in turn higher water consumption for the

amount of area. We are perennially facing water shortage and restrictions. It is not morally responsible for developments such as this to be approved because the water usage, the traffic, the quality of life of the entire area is impacted STRICTLY FOR THE PURPOSE OF CORPORATE PROFITS. Frankly, that's immoral and the goal is not to spread dense housing all over the Hill County impacting a quality of life that so many of us move out here for. Larger lots, individual septic systems and larger houses would cost more but the demand for rural Hill County homes will stand the need for higher investments by homeowners. Don't mess with the Texas Hill Country and don't just build the minimum possible in town lots. TCEQ has no need to approve this facility to accommodate Lennar. If it does, where is the limit after you set this precedence?

COMMENTS: This permit request seems to be completely unsupported by any further EPA and environmental studies. We, the residents of Mystic Shores Peninsula, should have enough time, resources provided to be able to determine long term environmental, animal and human safety impact. It seems as reacting to this permit now without public hearing, and much more transparent approach, would be completely unsupported and against what TCEQ stands for.

Please pause, re-open to public and since this would affect us, decision should be made with us. Sincerely, Peter Soltys, Ph.D.

COMMENTS: I reside in Comal County and am writing in regards to the purposed subdivision to be built on Rebecca Creek Road and Highway 281 of approximately 700 homes. Two years ago, when we built our home on 1.251 acres, when we installed our aerobic septic system, because we were in the Contributing zone of the Edward's Acquifer, we were told we could not even spray grey water on our grass, because we were in the Contributing zone. Per your TECQ Pub RG-011, A Contributing Zone includes "all watersheds that feed runoff into rivers and streams that flow into the

recharge zone." So, if we were not allowed to spray grey water into the zone, how is it that a subdivision of 700 homes on less than a quarter acre allowed to directly purge grey water directly into the Guadalupe River and Canyon Lake, which directly affects our drinking water?

COMMENTS: Dear TCEQ, I understand that Canyon Lake Water is asking to build a sewer plant for a housing project that will have 718 town homes on 4,000 square foot lots and a 31 acre business park all on 200 acres in Spring Branch. The discharge from this plant will be 260,000 gallons of waste water per day dumped into Cypress Creek which will discharge into the Guadalupe river. The waste water will pass through several ranches, private homeowners lots, and through the middle of the Jumbo Evans Sports Park where children play football, soccer, baseball, and tennis. Visitors to the park will

have to drive through the creek to gain access to the different sports fields. I am against this project and feel it is environmentally destructive, it has the potential for major health issues, it will severely impact private landowners' rights to enjoyment of their property and it will contribute to the ongoing pollution of the Guadalupe River. Why is it your organization continually goes against the will of the people and chooses to support projects that are destroying the Hill Country and Texas? You are to be "good" stewards of Texas's natural resources but you consistently choose corporations over our land, water and animals. Enough is enough, PLEASE DON'T GRANT THIS PERMIT!!! Sarah Thomas

COMMENTS: The name of your organization is the Texas Commission on ENVIRONMENTAL QUALITY. Sewage run off into ANY body or water/ river/ creek etc is the antithesis of "quality". Please consider the future of spring branch and surrounding areas before agreeing to the wastewater that would be dumped from this project. In similar situations there is documented cases of increased algae blooms, severe damage to wildlife and its fragile ecosystems, not to mention that sewage wastewater is contaminated with a number of harmful elements. Please consider the children and

families and millions of tourists who visit the Guadalupe water on a yearly basis. If everyone knows that their river is being fed wastewater, no one will want to or even be able to enjoy the natural resources that this area has to offer. I'm urging you to say NO!!!

COMMENTS: I recently heard about a developer that wants to dump wastewater and sewage into the river. I find this outrageous. If they want to build a neighborhood out in the middle of nowhere, with no sewer system, then they should build on lots that are large enough to support septic systems. Wastewater is full of chemicals, pharmaceuticals, and bacteria all of which will destroy the water quality and the health of the river. These builders will throw up this neighborhood and stick all of the residents in the area with an environmental disaster. They'll be long gone by the time

people realize what happened to their river. Damage the rivers and you'll also damage the tourism business that is built around the rivers all over the New Braunfels area. People do not want to swim in sewage, even if it's treated. Please DO NOT approve this horrible request. Thank you, Heidi White

COMMENTS: No to allowing 260000 gallons of sewage to be discharged by Lennar homes. Bulverde and Spring Branch are not to be destroyed so that builders and relators can profit and move on? NO! NO! NO!

COMMENTS: Waste water in our river and lake would be devastating in so many ways. It can't be safe if it possibly contains chemicals which can't be broken down. Our children swim in those waters! Not to mention the harm to businesses related to tourism...no one will want to enjoy water sports if they hear about waste water being dumped into the water.

COMMENTS: The thought of dumping sewer water or anything that comes from a sewage treatment plant into our rivers and lake would create an economic disaster for the Canyon Lake area. Tourism would disapper, businesses that count on tourism for fishing and water sports in this area would disappear. Property values would be severely impacted. If you move forward and approves a permit that would create an economic disaster for this area. Your company could be held liable for economic damage that is the result of you issuing this permit. To support ONE compainies desire to

bring a HIGH DENSITY building program into our community that does not have the infrastucture for this type of project would be irrusponsible.

COMMENTS: IMO the monies collected for future projects would be pocketed. Used for Texas pay raise for officials. Accumulation of interest. This project will destroy New Braunfels Tx on the Guadeloupe. And registered voter homesater towards the coast home and land owners along the Guadeloupe River. Putting sewer water in Guadeloupe. In future projects. IMO
